A HAPPY NEW YEAR

is assured to all who use "QUEEN'S HEAD" and "FLUER DE LIS" Iron—no worry about defective sheets and ruined reputation. Our best wishes to all our friends, and hearty thanks for their support which made 1903 a banner year.

JOHN LYSAGHT, Limited, Makers, BRISTOL, ENG.
A. C. LESLIE & CO., MONTREAL, Managers Canadian Branch

THE "SAFFORD" RADIATOR

INDISPUTABLY LEADS THE WORLD

because of its scientifically constructed joints that dispense wholly with bolts, rods and packing, which improvements we control, and which not only make the "Safford" positively non-leakable, but give it the ability to stand nearly double the pressure of any other Radiator. It is perfect in construction.

Perfect Circulation **Perfect Radiation**
Perfect Operation **Perfect Satisfaction**

are its predominant characteristics guaranteed by the largest Radiator manufacturers of the British Empire.

Illustrated Booklet free on application explaining why no Radiator tested honestly against a "Safford" has ever proven its equal in power or circulation.

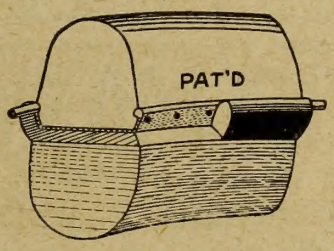
Done on Purpose

The Dunlop Side Wire Tire is made on purpose to stay on and it will not come off the wheel until it is taken off on purpose. The retaining wire does not wear against the rubber of the tire, but upon cross bars vulcanized into it at regular intervals. The wire cannot cut into the rubber and the tire cannot wear away from the rim of the wheel —it is held so firmly and with such equal force. The side wire is an improvement that improves.



Get this good thing for your customers. Prices and catalogues on application.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

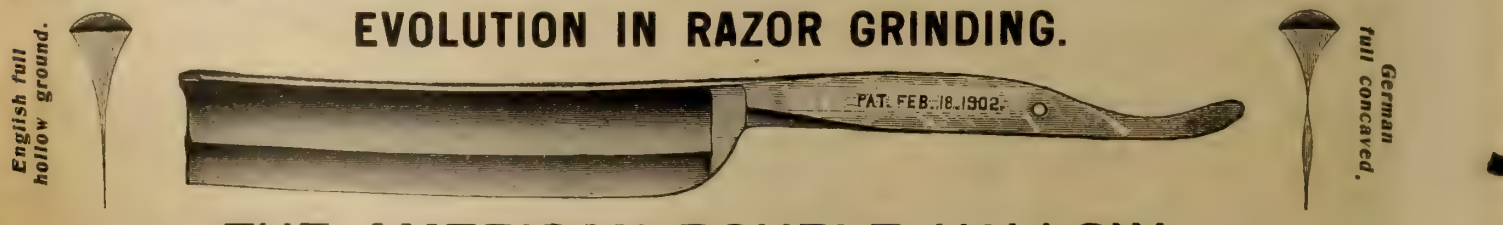
EVOLUTION IN RAZOR GRINDING.



THE AMERICAN DOUBLE HOLLOW.

Have you ever seen a razor too good to be used on your face?

The old-fashioned way to grind a razor was the English full hollow, but it was found that, if ground thick, it was harsh on the face, if very thin it would vibrate or would not shave clean.

About 30 years ago a new style of grinding was invented, the German full concaved; this was found better; it had only one fault, being thick above the edge it cannot easily be kept sharp on a strop, you have to hone it very often. We are making a newly Patented Razor, the American Double Hollow, which has two distinct hollows. This razor, if properly used on a strop, practically never needs honing, because it is so thin above the edge. Try it and you will be more than pleased.

AGENTS FOR CANADA { **Caverhill, Learmont & Co., Montreal.** **Rice Lewis & Son, Limited, Toronto.**

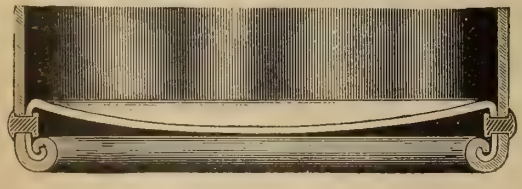
KEMP'S BROAD HOOP ROLL RIM BOTTOM MILK CAN TRIMMINGS



A criticising public have used them for the past five years and the increasing demand is proof of their superiority, also evidence of the satisfaction which they give

The Roll Rim Bottom having no sharp turns does not break the grain of the metal or lessen its wearing qualities.

Narrow Top Hoops can be supplied in place of Broad Top Hoops if desired.

For Strength, Durability and Finish our Trimmings are unexcelled.

They cost no more than inferior qualities.

We also carry in stock a full line of **First Quality Tinned Iron,** cut suitable for the different size of Trimmings, which we will supply at the lowest current market quotations.

KEMP MANUFACTURING CO., TORONTO, CANADA.

IMPRESSIONS OF THE GREAT WEST

Gathered During a Transcontinental Tour with the Canadian Manufacturers' Association.

By W. L. E.

OUR trip down the Arrowhead and Kootenay lakes was one we shall remember all our days. The weather conditions were not all we could have desired, but we enjoyed ourselves, nevertheless. When we left Arrowhead on one of the two stern-wheel steamers, which the C.P.R. has on that route, the rain was falling briskly and the clouds hung like thick gossamers around the mountains which skirt Arrowhead lakes—which, by the way, are but the widening out of the Columbia river, which we saw for the first time at Field, on the main line of the C.P.R.—shutting out peaks from our view. I do not intend entering into a discussion of the logic or the illogic of Samuel Johnston's remark to the effect that the state of the weather has nothing to do with men's moods. All I know is

Sunshine on Kootenay Lake.

that unfavorable weather at any rate did not permanently effect our state of mind. The fact that we were in good company no doubt is the partial explanation of this, for we know that there is nothing better in the world than good company. It is the spice of life, and its presence makes melancholy next to impossible. In good company one can only be melancholy by premeditation. But besides the spice of good company an exceedingly good dinner was served us on board in the evening, notwithstanding that the steamer had more than its usual quota of passengers. We had nothing better on the whole of our itinerary trip. The same applies to the waiters, who were young, and had more the appearance of three or four year university students than anything else. They were bright and intelligent looking fellows, and knew how to be attentive. The cook who satisfactorily supplied the wants of the inner man—which of course means the wants of the inner woman as well—was a Chinaman, and had been in his present position about 13 years. His assistants were also from the "Flowery Kingdom." One of the pleasures of the trip was to see him and his staff preparing our meal. Everything was done systematically, and there was no flurry nor any exhibition of temper. They seemed quite unconcerned and no more perturbed because of the extra demands upon them than if they were preparing a meal for an ordinary family. More than one of us possibly imagined what would have been our experience if we had been crowding around the female cook in some of our homes under such conditions. It is altogether likely we would have been forced to beat a hasty retreat. The kitchen was situated on the lower deck of the steamer and was open to the view of those who were disposed to visit that part of the steamer—and a good many were disposed.

* * *

But the manner of embarking and disembarking passengers interested us possibly more than anything else during the trip down the lakes, for the 125 miles between Arrowhead and Robson, where our journey down Arrowhead lake began and ended respectively, we did not see any wharves. When it was necessary to put a passenger off or on, the steamer made for the side of the lake and ran close to the shore. Then a narrow gangway and sometimes two gangways, one on top of the other, was pushed out from the deck to the shore, and up and down this the passenger ran, possibly with a couple of grips in his hands, while we held our breath expecting every minute to see him topple over, so steep was the incline and narrow the gangway. But I suppose the people in that part of the country are used to walking such gangways. At night the process of embarking and disembarking passengers was even more interesting than in the day time. Commercial travellers and others who wanted to get on board our boat, lit bonfires on the shore. These bonfires, particularly in the darkness of the night, with the black mountains as a background, made a wierd picture indeed. Some of these bonfires were of large proportions, and it was a wonder to us why they wasted so much cordwood for such a purpose, but then of course wood along the shore there is of no value, and there is an abundance of it. When one of these bonfires was sighted by the man at the wheel, the prow of our steamer was turned towards it, while the powerful searchlights on either side of the boat were brought into play to light our way to the shore. These searchlights put one in mind of a glaring two-eyed monster; and the sight to the passenger who was watching us on shore, must have been a striking one indeed. Frequently there would be no sign of any habitation at spots where we stopped to take on or put off passengers. At least the searchlights, as they ranged along the shore for some distance penetrating into the forest and valleys between the mountains, revealed none. At such spots, when a passenger was put off, the steamer was kind enough to turn one of its search-

A Coming Storm on Kootenay Lake.

lights shoreward in front of him as we steamed away to guide him on his way through boulders, trees and fallen trunks, until we came to a sharp bend in the shore, hiding him from our view. Of course, during the landing and embarking of passengers we easterners could scarcely refrain from passing jocular remarks, and particularly when a passenger would ascend the gangway as if he was walking a tightrope, we were always liberal in our applause when his feet touched the deck of the steamer; or, when he was descending, and was safely on shore. It was astonishing how quickly our steamer was turned, and how easily it was handled. The engineer in charge of the steamer informed us that this was due to the fact that instead of possessing one rudder, as is usual with ordinary steamers, she was equipped with two very powerful ones.

HOW A BICYCLE FORTUNE BEGAN.

SOME years ago a clerk in a coal office in a Western city grew tired of his bicycle and advertised it for sale, says an exchange. At 9 o'clock the next morning a buyer came, and the wheel was sold. At 9.30 came another inquiry, and at 10 two more. They were told they were too late. Then the clerk got to thinking, and when two more men came to buy he did not tell them his wheel was sold. He made some excuse for not showing it, and asked them to call the next afternoon. At lunch time he hurried to a newspaper office and advertised to buy a second-hand bicycle. Then came more inquiries who were put off as had been the last two.

The next day there was a procession of sellers of wheels. With each the clerk agreed upon a price, to be paid if one day's trial proved satisfactory. And there was also a procession of buyers, to whom one by one were sold, at an advance, the wheels left for trial. Thus the clerk found himself doing a profitahle little bicycle business. Then his employer objected to the loss of his time and to having the place cluttered up with second-hand wheels. So the clerk thought some more, and at noon arranged with a boy who worked across the street at a small store with a shed behind it, to receive and store the bicycles and help sell them. Meanwhile the advertising went on and presently the clerk left his place in the coal office to devote all his time to selling second-hand bicycles. His business grew, and from dealing in old he passed to selling new bicycles, and afterwards to manufacturing them. To-day he has a national reputation and his wealth runs up in the millions.—Iron and Machinery World.

THE PERSONALITY OF THOMAS A. EDISON.

THOMAS A. EDISON is 58 years old. Almost his entire time is passed among the buildings of his laboratory, either in the library, the galvanometer room or the chemical room. It is a common practice for him to have his dinner sent to him from the house, and to remain at his labors throughout the night.

He often passes ten or twelve hours at a time in a room from which every ray of light has been excluded. He told the writer that he is so accustomed to doing so, that now, after he has been in the dark room several hours, objects are as distinctly visible to him there as they are ordinarily in the daylight out of doors.

"After I have been in the dark room ten hours or more," he said, "I can see to read ordinary print without any other light than that which sifts through solid wood and walls, or emanates from the body. It is wonderful how supersensitive the eyes will become. Prisoners who are locked away for years in utter darkness can see things there as readily as you or I can in the sunlight."

He likes good stories. He likes to tell them and to listen to them. His appreciation of humor is as keen as his appreciation of a new invention. His manner is always gentle, kindly and thoroughly unassuming.

He is not a draughtsman. He sees his ideas in the ether around him, describes them, and directs somebody else to put them on paper for him.

He has little appreciation of a drawing after it is made. It is nothing but a flat surface, which represents measurements; but when the parts are made from the drawings nothing delights him more than to see them go together.

He likes a good cigar, but says "they smoke too easy." That is, he is apt to smoke too many of them if they are within reach.

His power of concentration is phenomenal. When he is at work time ceases, and he is quite as intense over a letter he is reading as when absorbed in his favorite occupation of working out a difficult problem. Every man in his employ loves him, and this is high praise. His eyes are as bright as stars; his face is the face of a babe; his smile is as ingenuous as a young girl's; his handclasp is firm and hearty; his step is brisk and energetic. He is an affectionate and a lovable man.

THE VILLAGE BLACKSMITH.

THE "village blacksmith," whose place of business is poetically described as being "beneath the spreading chestnut tree," was a man of great physical strength, but small skill. He hammered out heavy iron tires and bolts and made a rough job of shoeing horses.

Our admiration for the blacksmith of Goldsmith's day is lessened when we consider what horses have suffered in the past from the general ignorance of the men who practised horse shoeing. They simply nailed the shoes to the horses' feet as if they were fastening pieces of iron to blocks of wood. It was the custom to pare down the sole and frog of the hoof and tear away the crust with a rasp. The hot iron was then placed against the hoof and burned into place.

Iron shoes have been fastened to horses' feet since an early period and it s remarkable that until comparatively recent times neither science nor care were practised in the art. Anatomy teaches that the horse was once a four-toed animal and that the hoof of the modern horse is an elongated middle toe with the nail expanded and grown into a hoof. The purpose of the iron covering is to protect the hoof from wear upon stoney roads, but the evil of it is that it destroys the cushioning properties of the hoof, and seriously impairs the working life of the animal. In cities merchants owning horses, working over asphalted and macadamized roads, are using rubber pads which set getween the hoof and the shoe. The Dunlop horse-shoe pad is finding a wide sale upon its recommendation to prolong the working life of horses. The Toronto office of the company will mail full particulars of the device upon receipt of inquiry.

HARDWARE TESTIMONIALS.

"I cannot speak too highly of your razors. I took one of them to party last night and cut quite a figure in the scrimmage with which it wound up."—Ebon Black, of Blackville.

"Your grindstones are up to the limit. A politician came along yesterday with an ax to grind, and I let him turn the stone while I ground four axes of my own. He had the real grit and so did the grindstone."—Farmer Corntassel, of Wayback.

"Your augers are great on the bore. I took one of them the other day and knocked down a fellow who came to talk to me about life insurance and politics."—Wood Carpenter.

CATALOGUES, BOOKLETS, ETC.

HARDWARE AND METAL would be pleased to review catalogues, booklets or other such publications issued by manufcturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. No charge will be made for these services.

POWER TRANSMISSION.

The Dodge Mfg. Co., Toronto Junction, are sending out the December number of their bright publication, "Power Transmission Economics." The character of the volume may be understood by the following from its contents: "Why Take Chances by Buying Inferior Products?" "The Wood Split Pulley—Its History," "Belting," "The 60,000 Horse-power Plant at St. Louis," "Pertaining to Vertical Drivers," "To Clean Leather Belting," "The Latest Friction Clutch for Small Powers." The articles are all well written and authoritative. If you have not received a copy of the booklet ask for one.

J. STEVENS ARMS AND TOOL CO.

Complete to an exceptional degree is the new edition of Catalogue No. 50, issued by the J. Stevens Arms & Tool Co., Chicopee Falls, Mass. It contains detailed information for the trade regarding the single-shot target and sporting rifles, single and double barrel shotguns, single-shot pistols, barrels, rifle, telescopes, sights, etc. As Stevens' arms are known and handled in all parts of Canada and the United States the demand for this catalogue will probably be very heavy, so those desiring a copy should write early for it.

GOUDEY-M'LEAN CO.

"Hardware and Metal" is in receipt of several bulletins from the Goudey-McLean Co., manufacturers of electrical machinery, Liberty street, New York, describing the construction of several types of the generators and motors and also one of their transformers. The bulletins are very neat, the reading matter being very concise and to the point, and being illustrated with splendid cuts showing admirably the construction of the various parts.

In the construction of these machines no very startling innovations are to be noticed, but there are several features of them which are quite original and are worthy of mention.

One of these features is the improved method of making the coil connections. Instead of a loose and cumbersome cable connection around the outside of the frame to the terminal board, substantial connection studs are led through the frame to the terminal board and are firmly secured to it by nuts on both the inside and outside of the terminal boards. The connections led through the frame of the machine are insulated completely from it by mica tubes. A feature of the frames is that they are split horizontally and reinforced at the division point in order to prevent unbalancing of the magnetic lines of force.

Another noticeable feature of their machines are the brush holders. The elimination of defective features and the perfecting of desirable points are the result of years of experience in designing and use, and they claim that they are the best carbon brushes in use at the present time. Each individual brush is adjustable for spacing on the commutator, and no special tools are required for this adjustment. No current is carried, through the springs or sliding contact, and a stop is provided to prevent the brass portion of the holder from striking the commutator when the brush is removed.

The Goudey-McLean dust and waterproof motors for use in flour mills, mines, foundries or other dusty or damp locations are a little out of the ordinary. The enclosing covers are made of heavy sheet metal formed over clutches. They fit the frame closely and completely cover the commutator bearing, and being fitted with rubber packing in contact with the shaft on the pulley end, effectively exclude all dust and moisture. With the cover construction of sheet metal the machine runs much cooler than those equipped with thick cast iron covers.

They have another covering for machines intended not to exclude dust or moisture, but for a protection against flying pieces of metal coming in contact with the armature. These covers are perforated with ventilating holes. Motors thus protected are specially adapted for attachment to lathes, planers and other machine shop tools.

A NEW YEAR'S GREETING.

A happy and successful New Year is our greeting to all S.W.P. Agents and Friends.

We enter upon the New Year with liveliest feelings of confidence in the bright prospects it holds. The past year has been a good one for us and the outlook for a continuation of the prosperity we have been enjoying is bright.

We attribute the splendid progress we have made to the hearty co-operation of our agents. We want to thank you for what you have done for us; we shall strive constantly to be more worthy of your good-will.

SAVAGE ARMS CATALOGUE.

One of the most fascinating calendars of the year is a poster art calendar issued by the Savage Arms Co., Utica, N.Y. The scene portrayed by the artist, C. Rungius, is rarely interesting. In a hilly country a huntsman, with his Savage rifle in hand, stands over a fine buck which he has brought to earth. Standing nearby as if trained thoroughly to the sport, is the hunter's horse. The entire scene would be an ornament anywhere. This catalogue is too valuable for promiscuous delivery, so readers of this paper should mention "Hardware and Metal" when asking for a copy, sending 10c. with request.

THE B. GREENING WIRE CO.

The calendar issued by the B. Greening Wire Co., Hamilton, is, like those issued in former years, of practical service. The pad is of large size and the letters so distinct that they could easily be read across a room. On the back of the pad are several weights and measures tables of distinct value to users of wire, bar iron, iron and steel. Readers of "Hardware and Metal" can have this calendar on application.

TORONTO.

H. S. Howland, Sons & Co., Toronto, are distributing a dainty little booklet, showing many handsome photographs of leading public buildings, water front, street and park scenes. One of the scenes shown is an exterior view of the wholesale warehouse of H. S. Howland, Sons & Co., Front street, Toronto.

"WINTER SPORTS" CATALOGUE.

R. & W. Kerr, St. Catherine street, Hamilton, have ready for distribution their "Winter Sports" catalogue. Among the lines covered in the 124-page book are skates, hockey supplies, skis, showshoes, toboggans, sweaters, and other woollen goods, sleighs, exercises, gymnasium supplies, parlor games, playing cards, electric lamps, pocket cutlery, brass kettles, etc. This catalogue should be useful to hardware dealers in all parts for reference, particularly as R. & W. Kerr bear an enviable reputation for progressiveness and straight dealing.

A RETAILER'S CALENDAR.

"Gilpin's Hardware Store," is a feature of the calendar issued by the Orillia, Ont., Packet, this year. The local paper prepared the calendar and used most of the advertising space itself, but the valuable space on the first and last line of the date pad was secured by "Gilpin's Hardware Store," and used to good effect. The idea was an excellent one.

IVER JOHNSON
AUTOMATIC
REVOLVERS

Have the Largest Sale of any Revolver in the World.

WHY?

1st. Because they are absolutely safe; accidental discharge is impossible, and others are not.

2nd. Because they possess an intrinsic value not to be found in any other make.

3rd. Because they are the best advertised, and being the best advertised are the best known, and most demanded, etc.

Many other reasons could be stated, but we are prevented for lack of space; but send for our FIRE ARMS Catalog, it tells the whole story.

Automatic Hammerless.

IVER JOHNSON'S ARMS & CYCLE WORKS,
New York Office, No. 99 Chambers St. FITCHBURG, MASS.

OFFICE FIXTURES.

The George B. Meadows Wire, Iron and Brass Company, Toronto, are sending out seasonable greetings, the feature of which is an interesting view of bank fixtures "made in Canada" by that company. The fixtures are both artistic and practical and are a credit to their makers.

SHEET METAL BUILDING GOODS.

The Metal Shingle and Siding Co., Preston, Ont., have issued a neat booklet descriptive of the sheet metal building materials made by them. A wide variety of metal roofing, shingles, Spanish tile, corrugated sheets, metal sidings, metal building fronts, galvanized skylights, fancy metal ceilings, cornices, ventilators and ornaments. The booklet will be sent to the trade on request.

TRAVELLERS' MUTUAL BENEFIT.

THE Commercial Travellers' Mutual Benefit Society met in the Y.M.C.A. parlors, Toronto, Saturday night, week, to nominate the officers for the coming year. The elections will take place on January 23. President George Anderson was in the chair. The reports show that this has been one of the most successful years of the society.

The following were nominated:

President, S. R. Wickett, E. Fielding.

Vice-President, Joseph Taylor, R. R. Davis.

The following were re-elected:

Treasurer, J. A. Ross.

Trustees, Toronto, H. E. Bond, Robert Maxwell, G. E. A. Bradshaw, George H. Haslem, F. J. Zammers; Hamilton, E. A. Daly, J. Hooper; Montreal, C. L. Shorey, W. E. Ramsay; Kingston, M. S. Sutherland, J. F. Baker; London, J. M. Dillon, W. H. Escott; Winnipeg, Hyman Miller, C. C. McGlashan; Brantford, J. P. Morrison, J. W. Harris; Berlin, C. Huenn, J. Knuff; Guelph, H. F. Molden.

The following new branches were opened: Barrie, R. M. Butler; Peterboro, A. G. Dickson; Chatham, F. C. Stegman.

It was decided that the Toronto trustees might appoint trustees for Windsor, St. Catharines, Stratford, Ottawa, and St. Thomas.

MACHINERY

The Machinery Markets.

TORONTO.

A NEW year has been entered upon. The last two weeks of the old year, in most trades the brightest and most business like of all the year, but with machinery dealers usually the dullest, have been bridged over. Although the past two weeks may not have been quite so bright as those preceeding, still they were very far from being dull weeks on the Toronto machinery market. As was noted in last issue there was a slight depression during Christmas week and even the week before, and this has continued during the New Year's week. This depression did not, however, constitute a dull market, since it was only a slight falling off from a good market. The machinery dealers are unanimous in declaring the past year one of the best they have experienced. The Northwest and New Ontario have made large demands in the line of machinery of all kinds, and in no other year has so much machinery been shipped to British Columbia, our Prairie land and New Ontario. Nor have the older and better populated districts of Canada been behind hand in their wants. The year 1903 has been a prosperous one for Canada and her industries have been forging ahead rapidly. Consequently many new plants have been built and the capacity of many others has been increased. Thus there has been a continual deman for manufacturing machinery and for power producing and power transmitting machinery. The use of electric motors for the running of individual machines has become quite general during the past year, the transmission of power through wires and the application of it to the machine by the motor proving of much more convenient than by shafting and belting. Wood-working machinery, engines and boilers have constituted to a large extent the shipments of machinery to New Ontario, although considerable machinery for machine shop equipment has also been shipped. The Northwest has taken a large number of engines and boilers. The good times has not been limited to large machinery manufacturers and dealers, but has made itself felt among the machinists and die makers. The entire year has been a good one for them, but especially has the last three or four months been busy ones. The more machinery there is in use the greater is the number of repairs necessary. So the machinists have also reaped the benefit of Canada's industrial growth during the past year. The machinists in Toronto have been so busy that some of them have been lead to say that too much business causes as much worry as too little. Still most people would sooner be troubled with "too much" than with "too little." The year 1903 has been a splendid one for machinery manufacturers, dealers and repairers: What will the coming year be? Machinery men do not pretend to read the future, but they say that there is every promise at the present time for a busy new year. It is expected that the present slight depression will not continue longer than the middle of January. Of course there are the pessimistic ones who say that, although business is good at the present time and for the most part the prospects are good, there is no telling when a reaction may set in. However, there is generally a reason for any such reaction and as there is no reason now for one to be feared it may be left out of consideration. So far the Toronto market has not been affected to any great extent by the slackness in the States, and trade conditions are reported to be brightening up there.

The H. W. Petrie Machinery Co. report business much the same as last week. It is brisk, but of course not so much so as three or four weeks ago. They are, however, quite satisfied with the business done during the past two weeks, and look forward to an increase in orders about the middle of January. Prospective buyers are withholding orders until later on in the month. Prospects are good, however, and everything promises well for the year just entered upon.

The A. R. Williams Machinery Co. report orders coming in much more readily than is to be expected about the time of the departure of the old and the advent of the new year. The prospects for a bright market during the months to come are good, but there is no saying what will happen until after it has happened, and it cannot be said with any assurance what the condition of the market will be two weeks from to-day until that time has arrived. They say that they have not noticed any change on the market during the past week.

The Levy, Weston & McLean Machinery Co. say that business with them during the past week has been good, and that things are much the same as last week. They are finding a good sale for engines and boilers, and also for wood-working machinery. The outlook for good times in the industries of Canada is bright, and consequently the outlook for the machinery dealers is good.

W. H. Banfield & Son, machinists and die makers, think that there is every prospect for a good year. They have been very busy during the past week.

The Dominion Motor Machine Co. report business good, and are looking forward to a prosperous year to come. They are going more deeply into the manfacture of automobiles; and they are also putting on the market a neat gasoline engine for a motive power on farms.

The Jones & Moore Electric Co. expect that during the coming year the bright feeling that has characterized the market for electrical machinery for some time past will continue. At the present time business is good.

MONTREAL.

There is a general feeling of apprehension among Montreal machinery houses lest American competition may lead to extensive price cutting in Canada. This would have a demoralizing effect on business here. Could this price cutting game be avoided, there is no reason why machinery men should not find 1904 an even more prosperous year than 1903 has been. Naturally, trade is quiet this week but that is only to be expected at this time of year. Inquiries are coming in freely from all parts of the country and prospects are bright for a large

trade. Whether or not this trade will be profitable depends entirely on the course of action followed by United States machinery houses. At all events it is gratifying to find that while the market in the United States is dull, conditions in Canada are considered so satisfactory. Eliminate "dumping" by American houses and trade conditions in Canada will continue satisfactory. Alarm is expressed in some quarters owing to the failure of one large firm and the serious embarrassments of another, but on the whole there would be no serious fears for the future if the danger of "dumping" were removed.

The Laurie Engine Company report business in December, 1903, much better than in any previous December. A number of contracts are now being executed for engines of very large horse-power and orders for small engines are very numerous. Business in machine tools is considered very fair. A large machine shop in Thetford Mines has been fitted out by the Laurie Engine Co. Wood-working machinery has been selling well. The general outlook would be very satisfactory indeed were it not for the fear of severe price cutting by United States houses. There is no doubt that the demand for all kinds of machinery will be very good and unless price cutting is severe the Canadian trade will continue statisfactory.

Mr. Alfred Rubra, of the Machinery Exchange, reports business quiet this week, but as he says, no one expects much activity at this season. He does not handle machinery supplies, but for these he thinks there should be considerable demand. Numerous inquiries are coming in although actual business is small; the general outlook is considered quite satisfactory unless American competition should cause a slump in prices. American houses are now offering special inducements in order to capture our markets. A year or two ago when business in the United States was brisker than it is just now American machinery houses were not very obliging. They would not accept consigned orders. They accept these now without question and are offering special price inducements besides. Mr. Rubra has himself accepted a new American agency because of special prices being offered. Whether or not price cutting will be very pronounced it is difficult to say.

Williams & Wilson state that at present they are waiting to see which way the cat will jump. They are not sure that the pendulum is not about to swing the other way and if so Canada has already reached the height of her prosperity. Business is quiet just now, but that is only to be expected. Inquiries for future delivery are not so numerous as might be expected, showing that some buyers are holding off expecting a slump in prices. Business for 1903 has been exceptionally good; what 1904 will bring it is difficult to predict.

W. H. Nolan, of the Canada Machinery Agency, reports prospects quite bright. Inquiries are coming in satisfactorily and unless something unexpected should happen he expects another very prosperous year. Business this week is quiet, as it is to be expected.

Machinery and Electrical Notes.

The Moose Jaw Machine Works have been completely destroyed by fire. The loss is estimated at $5,000, which is partially covered by insurance.

The Laurie Engine Company are building a 400 horse-power steam plant for the Crown Grain Company, of Winnipeg. The plant includes engines, boilers, condensers, etc., and is in every respect up-to-date.

The Laurie Engine Company, Montreal, have just completed the erection of a 600 horse-power vertical cross compound engine for direct connection to electric generators for the Winnipeg street railway.

The Laurie Engine Company, Montreal, are busy now with some large contracts. They have just shipped a large cross compound engine for direct connection to electric generators to the St. John, N.B., Street Railway Company.

The Laurie Engine Company, Montreal, are now building two 1,600 horse-power cross compound engines for the Toronto Street Railway Company. These are now almost completed and the company are preparing to build a similar engine for the Winnipeg Street Railway Company.

A despatch from Fort William, Ont., says that it is probable that a large boiler works will be established at that place by an American company. The conditions under which the company will install the plant have been stipulated and are under consideration by a committee appointed by the civic council. Many are anxious to secure the plant on account of work that will be provided during the months when navigation is closed in the overhauling and repairing of boats that may be done at the plant.

J. J. Albright, one of the principal stockholders of the Niagara and Ontario Power Company, of Niagara Falls, Ont., says that the building of the plant is progressing favorably. The dynamos and other machinery are being constructed by the Westinghouse Company, and it is expected that the installation will be commenced in the Spring. He also says that contrary to the supposition of many, F. V. Greene, of New York, has been appointed general manager of the company and will not be engineer. He says that no change will be made in the engineering staff.

A despatch from London, England, says that the Financier and Bullionist comments upon the announcement that an order for locomotives for the Canadian Pacific Railway had been placed with a German firm by saying that some time ago the C.P.R. decided to order a certain type of locomotive, specifications of which they had prepared. The Glasgow firm which generally fills the orders of the company was too busy to bind themselves to deliver the locomotives within the time specified. Other British firms able to fill the order were in the same position, and thus the order was given to a German firm.

The Laurie Engine Company have installed a number of small engines ranging from 75 to 800 horse-power in different parts of the country during the past two months. They are making a specialty of their "Rival" engine which is made in different horse-powers ranging from 5 to 100. They do not claim that these engines are economical, for no engine of such small horse-power can be, but they do claim that it is as economical as an engine of that horse-power can be made. During the last two months they have sold seven of these engines to the C.P.R. and that company are known to be connoisseurs of engines and machinery of all kinds. These engines will work with compressed air as well as with steam. They are compact, the frame being all one piece, and they require only one foundation. There is nothing about them to get out of order as they are extremely simple in construction.

The Carriage Makers' Machinery.

THE progress of recent years in blacksmithing and carriage making is manifested by the following suggestions in Backsmith and Wheelwright: The old-fashioned carriage shop, dingy with age, black inside and out, with broken down wagons and farm machines and other rubbish laying all

History of Babbitt Metal.

AN erroneous idea appears to prevail in regard to the invention of Babbitt metal, says the Metal Industry. Although Isaac Babbitt was the inventor of the method of using soft metals in journal boxes, his patent specification makes no claim on the alloy itself, but simply on the method of holding the soft metal in place. Isaac Babbitt was born in Taunton, Mass., on the 26th of July, 1779. He learned the trade of goldsmith, and in 1824, in his native town, made the first Britannia ware produced in the United States, but this enterprise proved unsuccessful. He then removed to Boston and entered the employ of the South Boston Iron Works, and in 1839, while an employe of this establishment, he produced the invention which has perpetuated his name. For this invention he was given a gold medal from the Massachusetts Charitable Mechanics' Association, and afterward Congress granted him the sum of $20,000 as a reward. In 1844 the invention was patented in England and in 1847 in Russia. After devoting some time to the production of metals he engaged in the manufacture of soap, so that his name has become almost a household word. He died insane at the McLean asylum, Somerville, Mass., May 26, 1862. The fact that in the patent specification no claim is made for the alloy is sufficient to dispel the ordinary belief in this direction. Britannia metal, pewter or an alloy of tin, 50 parts; antimony, 5 parts, and copper 1 part are recommended. The latter alloy is somewhat softer than that now known as "genuine Babbitt," which is commonly composed of tin, 96 parts; antimony, 8 parts; and copper, 4 parts. The original idea in the use of a soft metal was practically the same as it is now—i.e., to make a bearing which would conform to the surface of the axle. It is natural, then, that the alloys used to-day are somewhat harder than the original material employed. It is also natural that the same Isaac Babbitt should have been handed down to posterity as the inventor of the alloy, although, of course, quite erroneously.

A Business Transfer.

The Smith & Hemenway Company, of New York, have completed arrangements with the Page-Storms Drop Forge Company whereby they have secured the entire marketing of this company's engineers' wrenches. The New York office of the Page-Stevens Drop Forge Company is now at 296 Broadway, care of the Smith & Hemenway Company, who will look after this end of their business exclusively.

In addition to their manufacture of drop forged engineers' wrenches, they pay particular attention to the making of forgings from blue prints or samples, for anyone desiring their class of work. Parties interested or wishing to have forgings made might make their requests known direct to the Page-Storms Drop Forge Company's factory at Brightwood, Mass.

Shipping of Canada.

THE total number of new vessels built in the Dominion of Canada during the last fiscal year has been announced as aggregating 30,216 tons. This includes 70 vessels of 8,928 tons, built in the inland Provinces for lake and river use. Added to the shipping upon the Canadian registry books at the end of the previous year this gives a total of 7,013 vessels, aggregating 696,492 tons, or approximately 7,000 vessels averaging 100 tons each. The fact, however, that a good many Canadian vessels were, as usual, sold to other countries during the year, besides several being lost, probably left the balance lower at the end of the year than at the end of the previous year, which condition is quite in line with the trend of events for a generation past. The vessels on Canadian registry in 1898 numbered 6,427 of 690,525 tons; in 1895, 7,262 vessels of 825,837 tons; in 1892, 7,011 of 964,351 tons; in 1883, 7,374 of 1,267,394 tons; in 1873, 6,783 of 1,073,718 tons. The fact that only four countries to-day own shipping to a volume of more than 1,000,000 tons shows that the Canadian figures are not immater-

ial. Nova Scotia, owing to her extensive coastwise and fishing trade, continues to lead the other Provinces in vessel ownership, the number on her registry books December 31 last being 2,037 vessels of 212,967 tons, compared with 1,699 of 156,449 tons for Ontario; 1,288 of 137,660 tons for Quebec, and 917 of 64,605 tons for New Brunswick. —Marine Review.

Fairbanks' Travellers Meet.

The Fairbanks Co. held a meeting of their travellers during the first four days of the week at their Canadian headquarters in Montreal. Their travelling representatives and heads of departments from their Montreal, Toronto, Winnipeg and Vancouver houses were present. The machinery salesman requires to know his goods and the object of the convention is to keep the salesmen in touch with all the latest improvements. The superintendents and experts connected with the various factories attended the convention and were at great pains to familiarize their men thoroughly with the various lines of goods handled. A pleasant feature of the occasion was a dinner given at the Engineers' Club on Tuesday evening by the manager, Mr. Henry J. Fuller.

American Sheet & Tin Plate Co.

THE American Sheet Steel Company and the American Tin Plate Company will be consolidated the first of the year under the name of the American Sheet & Tin Plate Co. The present offices in New York of both companies will be abolished as soon after January 1 as possible and will be removed to Pittsburg. Offices for the combined companies have already been secured in the Frick building, and when the sales and executive departments have been removed from New York, the operating and local sales departments of both companies will be removed from the Vandergrift and Carnegie buildings respectively to the Frick building. Geo. G. McMurtry, president of the American Sheet Steel Co., has been elected chairman of the board of directors of the new company and W. T. Graham, president of the American Tin Plate Co. will be president. W. M. Leeds, of the American Tin Plate Co., has been elected first vice-president and E. W. Pargny, of the American Sheet Steel Co., has been elected second vice-president. H. B. Wheeler will be secretary and treasurer. By this consolidation operating expenses can be reduced very materially both in sales and operating forces, as well as in the executive department.

W. M. Leeds, who becomes first vice-president, has been head of the tin plate operating department. Mr. Pargny has been manager of the sheet mills in the Kiskiminetas valley, which are the largest and most important of the American Sheet Steel Co. H. B. Wheeler is a brother of Frederick S. Wheeler, who was prominent in the formation of the American Tin Plate Co., and treasurer until he became associated with the American Can Co.—Iron Trade Review.

Now Have Canadian Warehouse.

Smith & Hemenway Co., New York, have found their Canadian business growing so rapidly that they have found it desirable to open an office and sample room at Room 215 Coristine Building, Montreal. Applications for quotations, etc., should hereafter be sent to that address.

Allen C. Jenking will have charge of the new office and Mr. Smith, who formerly represented the firm in Canada, will now cover territory in the United States. Mr. Jenking will be pleased to welcome any of the trade desiring to examine the samples of cutlery and hardware specialties shown by the Smith & Hemenway Co.

MADE IN CANADA

Stitched Cotton Duck Belting

Superior to all others.

FOR

Agricultural Machines, Elevators, Pulp and Paper Mills, Cotton, Woollen, Cement and Saw Mills, Machine Shops and Electric Powers.

MANUFACTURED BY

DOMINION BELTING COMPANY Limited

HAMILTON, CANADA.

USE OUR

"MAPLE LEAF BELT DRESSING"

CRYSTAL REGISTERED TRADE MARK CORUNDUM

Craig Mine Crystal Corundum

NOT ADULTERATED WITH EMERY.

Has an effective hardness of 9. as compared with 10. of the diamond. Wheels made from it do from two to five times the work of emery wheels. Why? CRAIG MINE CRYSTAL CORUNDUM has 95 per cent. to 98 per cent. compared with emery's 30 per cent. to 40 per cent. of crystalline alumina—the only part of emery that cuts.

Emery rubs and burns. Craig Mine Crystal Corundum cuts fast and cold. ***Our booklet will explain.***

The Canada Corundum Company, Limited

TORONTO, CANADA.

"Dominion Brand" Tarred Felt.

THE BEST THAT MONEY CAN BUY.

"Shield Brand" Ready Roofing, 2 and 3-ply.

QUICK SELLERS.

MANUFACTURED ONLY BY

Lockerby & McComb, 65 Shannon St., Montreal

Bell Telephone Main 1989.

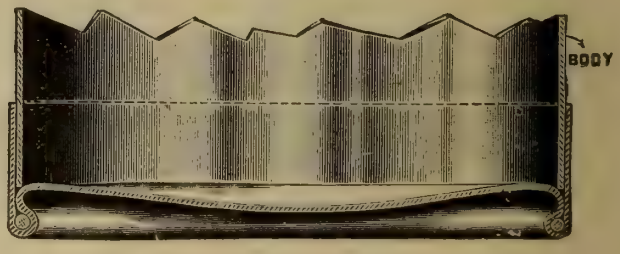
"Samson" Milk Can Trimmings.

Strongest, neatest, most sanitary and only one-piece bottom made.



Section of "Samson" Milk Can Bottom.

Has no seams or rivets to corrode and collect dirt.

Every bottom in each size is of an exact diameter. Being stamped out with a die—not spun—there can be no variation as in a bottom made in several pieces.

Requires less solder and work in putting together than pieced bottoms—also wears longer.

PATENTED, JULY. 23, 1900

VALUES IN THE HARDWARE TRADE.

THE recent reduction of 10 per cent in barn door hangers and tracks and 20 per cent. in spring hinges was directly due to the competition of the United States manufacturers who have recently been attempting to gain possession of the Canadian market in these lines.

It is not thought probable that there will, at any rate in the near future, be any important reductions in the price of hardware manufactured in Canada. It has been pointed out to "Hardware and Metal," and with some reason, that before this can be accomplished there must be a reduction in wages, which in the present condition of the labor market is not thought likely. During the past year the advance in wages among the manufacturers of hardware lines has been about 17 1-2 per cent. As wages is the most important item entering into the cost of the manufactured hardware, it is evident that those who hold that prices are likely, as a rule, to be maintained are fairly accurate in their conclusions.

But the cost of labor is not the only item which tends to maintain prices in finished hardware lines. Values in malleable iron, brass, and steel are being well maintained and not only are they being well maintained, but it is still difficult to get orders filled.

CANADA AS A DUMPING GROUND FOR IRON AND STEEL.

ATTENTION has again been drawn to the iron and steel imports into Canada by the deputation which waited upon the Minister of Finance on December 28th. This deputation claimed that the ironmasters in the United States were selling steel rails, and other products of iron and steel, in Canada at prices that are from 20 to 25 per cent. less than are exacted in their home market. It was claimed that steel billets, are being offered as low as $20 per ton, whereas a year ago or less Canadian manufacturers were asking and getting all the way from $24 to $26 per ton for pig iron.

The question raised by the deputation is an important one. Looked at only from the standpoint of the people who purchase the imported iron and steel at the low figures named, it is no doubt an advantage to be able to secure material at bargain prices; but there is another and a broader point of view from which it should be considered.

In the first place it is well to consider what the object of the exporters is when they use Canada as a dumping ground for the surplus products of their factories. We all know that it is a common thing for nations as well as individuals to endeavor to destroy their competitors. A few years ago, it will be remembered, the iron pipe manufacturers in the United States endeavored to destroy similar manufacturers in Canada. But the Canadian manufacturers bought up the iron pipe as it was imported, changed the thread and exported it to Great Britain, and undersold the United States manufacturers in that market. This it will be remembered put a stop to the effort to slaughter the Canadian market.

It is a well-known fact to those conversant with the trade, and who regularly peruse the columns of the United States papers, that the manufacturers in the United States are getting quite concerned about Canada as a competitor in the iron and steel trades. The question, therefore, resolves itself into this: Are we prepared for the purpose of getting a few bargains in iron and steel, to run the risk of destroying, or at least crippling, an industry which during the last eight years has made such great progress in this country?

If the United States can make it uncomfortable for the iron and steel industry in Canada this early in the period of quiet trade which is apparently setting in across the border, what may we expect should actual depression take place?

In the United States, even if the Customs tariff was not as high as it is, there is a system of appraisement in vogue which would prevent that market from being used as a dumping ground by Canada or any other country. In other words the Custom's appraiser places a price on the article imported irrespective of what the invoice may show. An instance of this came under the observation of "Hardware and Metal" not long since. A representative in the United States of a Canadian manufacturing concern paid a visit to his principal's factory. There was a line of goods being manufactured which sold to the trade at $12.50. He at once realized that if he could sell it in the United States at that price there would be a large business for his firm. He accordingly took some samples with him, but when he endeavored to pass them through the Customs, the appraiser set the price for valuation at $35.00, and although he was shown that the price in Canada was $12.50, he could not be moved from the position he took. This put an end to the effort to get business in the United States.

Canada cannot afford to run any risk in regard to its iron and steel industry and it is to be hoped that the Government, between this and next session of Parliament will give the subject very careful consideration.

CANADIAN TRADE WITH NEW ZEALAND.

A CLOSE bond of sympathy throughout the Empire has borne excellent fruit in the better relations between the various colonies as well as between the colonies and the Mother Country.

The preference sentiment is growing in scope as well as in intensity and there seems every reason to believe that within a few years all the chief British colonies will be ready to offer to as well as receive preference from Canada.

A growth of Imperial feeling is manifested in New Zealand, where a preference has been given Canada. This is bound to have its effect on all business relations between Canada and New Zealand.

One proof of the increasing interest in Canada throughout New Zealand has been given in an unusual number of subscriptions to "Hardware and Metal" coming in from large importers there. The number of these during the past six months has been particularly large though this paper has been consistently advertised in Australia as a medium of trade information for some years.

Another proof has come in a letter to the Canadian Manufacturers' Association from Mr. Zoeller de Schryer, its representative at Auckland, New Zealand:

"The latest and best news I can send you this mail is that our Government has adopted a preferential tariff, which is greatly in favor of the Canadian manufacturers. I hope the manufacturers will rise to the occasion and grasp the opportunity now offering in New Zealand with both hands. It is a rare chance of collaring the trade which in ever increasing volume has been carried on by the United States. Their exports to this colony amounter to over seven million dollars last year, an item worth struggling for.

Keep Prices the Same.

"When you are writing on the subject urge your members not to raise their prices up to the level of the preference, but first of all to make use of it to replace the Yankee. Later on, when this market has been fully conquered, there will be a chance of bettering prices. If they don't act prudently they have no chance, as the United States manufacturer, every awake where his interests are concerned, will meet the tari by reducing his prices as much as possible, and if Canadians raise theirs they will soon be on the same level, and things will go on as they were before, and a golden opportunity will be lost.

"We are in the quiet season now, but prospects are better than ever, and if only your exporters are wide awake Canada will do a roaring trade in this colony, but I have strong doubts about their wide-awakeness, and not without reason. Rouse them up if you can."

Many Articles Wanted.

A large firm doing a wholesale business in New Zealand as saddlers, coach ironmongers, leather merchants and indentors, contractors to the New Zealand Government, with head office in England, writes:

"On account of the preferential tariff we would like to have quotations from you on the following: Canadian axles, half patent; common nut, Hughes patent, and Richards' long distance, the same as we have been getting from the Anchor Axle Company, Bidwell's axle grease, the same as got up by Isley, Doubleday & Co.; sewing machine oil in 4 oz. bottles; wrought step treads, and shaft couplings, the same as got up by H. D. Smith & Co.; whip sockets, dash rails, as got up by the Metal Stamping Co.; bevel edge carriage bolts, the same as got up by the Union Nut & Bolt Co.; felloe plates, H. D. Smith & Co.; 36-inch white cotton duck, No. 5 (for the last year we bought about 22,000 yards of this); 36-inch No. 6 ditto, 54, 60 and 62-inch No. 6 ditto; blue cut swede iron upholsterers' tacks, the same as got up by the Atlas Tack Corporation; buggy harness, the same as supplied by Perkin, Campbell & Co.

"Please let us know what saddlers' tools are made in Canada. Also let us know if you make sweat pads with three hooks, No. 22 k10 ,the same as supplied by the E. L. McLean Manufacturing Co., Greenfield, Ohio. Quote us also for reaper slats for putting on the aprons of reapers and binders, 60x3-4x3-8."

Inquiry From Christchurch.

A firm in Christchurch, N.Z., writes: "We are dealers in agricultural and general machinery, and among other lines have been importing the following from the United States:

"Oil engines, stationary, portable, marine, traction, road machinery, graders, rock crushers, etc., stray presses, windmills, etc.

"Our Government has recently passed a preferential Customs Tariff Act which discriminates against foreign goods in some of our lines in favor of goods manufactured under the British flag, and if we can draw our supplies from your country it is probable we may wish to do so. We therefore wish to get into touch with your manufacturers, and shall be glad if you can help us to the extent of sending us some publication containing the business announcements of such firms. We may add that our selling and distributing organization covers the whole o fthis colony and we are pretty well fixed for doing business. Our United States purchases are paid for in cash in New York, and present arrangements could doubtless be applied to present arrangement."

Another commission house writes:

"The preferential trade bill just passed by our Government, which increases the duties on foreign manufactured goods, will without doubt greatly assist Canadian firms to compete successfully in this market, as it gives preference to all parts of the Empire. We hope therefore that it will result in a large increase of imports from Canada of such classes of goods as have previously come from the United States."

Still another firm of importers and wholesalers at Auckland desires to be placed in touch with Canadian manufacturers of wood working machinery, split pulleys, emery and corundum wheels, building materials, hose, roofing and floor tiles.

A GOOD GOVERNMENT IN TROUBLE.

THE meaning of the election in North Renfrew is obvious. It means that the confidence of the people in the Ross Administration is gone. This is to be regretted. The Government, has on the whole, been a good one. Measured by the standards of Government in the other Provinces of the Dominion, it is rather superior. But evil days have evidently fallen upon it.

Its political opponents may charge it with all sorts and conditions of maladministration. There is no doubt that some members of the Administration rest under very grave suspicion indeed; but to charge the Government as a whole with maladministration is to levy a charge that cannot be substantiated by facts.

The loss of prestige and the threatened loss of office is nearly altogether due to the acts of its servants. The acts of some of these servants will go down into the political history of this country as among the most disgraceful ever practiced. And these have gone on multiplying until they have practically ruined the Administration. The latter cannot plead irresponsibility. It is just as responsible as a merchant is for the action of his clerks; and it must pay the penalty.

Placed under similar conditions a board of directors would either resign or at least make an appeal to the shareholders. This is what the Ross Government in Ontario should do.

The people are the shareholders and they are manifestly dissatisfied. The least the Government, therefore, can do is to appeal to them through the ballot box.

The plea that the Opposition is weak, may be true, but whatever may be the condition of Mr. Whitney and his party, the Government should not attempt to carry on the affairs of the Province under the present unsatisfactory state of affairs.

Office is not everything. Good government far transcends it in importance. As long as the present state of affairs exists Ontario cannot have good government.

U. S. TRADE WITH CANADA.

THE unfairness of the United States tariff against Canada is illustrated by statistics just given out from Washington on the trade between the two countries for the past ten years. The total commerce of the United States in 1893 was $1,652,000,000, while in 1903 it will aggregate about $2,460,000,000, an increase of about 50 per cent. In the meantime her trade with Canada has increased from less than $100,000,000 in 1893 to over $185,000,000 in 1903, or approximately 85 per cent. That is to say the trade of the United States with Canada has increased nearly twice as fast as the whole trade of the great Republic. But it is on analysis of the constituents of this trade that the injustice becomes most apparent. Of our total trade with the United States we bought from them in 1903 $130,000,000 while they bought from us only $55,000,000. In 1893 the figures were respectively $57,000,000 and $34,000,000. That is, while our imports from them in ten years increased $73,000,000 or over 125 per cent. their imports from us increased only $21,000,000 or about 60 per cent. In short, our imports from the United States have increased twice as fast as their imports from us.

It is apparent from these figures that Canada is the best market that the United States has. Americans are awakening to this fact as is evidenced by the growing agitation for reciprocity on the American side. Reciprocity which at one time had many friends in Canada, can at present scarcely summon a baker's dozen advocates, but on the other hand there is a growing feeling in Canada among both political parties in favor of a course of fiscal reprisals. The Canadian people felt but survived the McKinley and Dingley tariffs. They are more independent of American markets than ever before in their history, while the importance of Canadian markets to the United States was never so great as at present.

Americans who are interested in the Canadian trade would consult their interests by advocating the reduction of the absurdly high tariff which, as the above figures show, allows of only a one-sided trade, a kind of trade which will not be borne forever.

STOCK TAKING.

STOCKTAKING is the order of the day. The jobbers are already at it. The retail trade will soon be engaged in this masculine form of housecleaning. It is no pleasant task to ransack the whole stock of a large store, but it is one of the very greatest importance. It is necessary, in the first place, in order to judge, correctly, the business done during the past year and secondly to bring to light forgotten lines or goods that have proved slow sellers.

That the first end may be attained great care should be taken in the proper valuation of damaged, shopworn or out-of-date goods. To set them down in the stock list at cost price is merely to deceive one's self and to make all the worry and bother of no use. The merchant should be as flint against any disposition to boost the value of his stock. He will be rewarded in the knowledge that his stock is actually worth what it appears in the stock lists, and that his nominal profits for the past year are not subject to any discount for dead stock on hand.

But this is merely the bookkeeping side of stocktaking and is useful for the information not that is merely acquired but that is made use of as well.

When, therefore, stock has been gone over and the damaged, shopworn or slow goods discovered the next thing is to get rid of them. They merely take up room. It would be a good idea to separate out all this kind of stock; establish a bargain counter; advertise it well; and at once get rid of unappreciated goods and create the interest in your store always incident to a bargain counter. The large departmental stores have won no small part of their success by means of the bargain counter, there is no reason why the smaller merchant should not reap some of its advantage at least in getting rid of undesirable stock.

With the capital thus set free a cleaner and fresher stock can be got in and discount saved.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Hardware.

Montreal, December 31st, 1903.

THIS is always the dullest month of the year for the wholesale hardware trade. Travellers are all off the road and the number of sorting orders received this week is small. Several wholesale houses are making the most of the slack season by taking stock. While trade is very slack just now, wholesalers are well satisfied with the year's business. The holiday trade has been particularly good this year. It is understood that the result of stocktaking operations concluded by several firms has been very satisfactory indeed. A number of complaints are heard this week that payments are not so prompt as might be desired or expected. Prices throughout are unchanged this week, cotton rope and twine being the only exception. In all probability there will be a still further advance on the prices quoted this week.

Spring Hinges—There is some inquiry for spring hinges for 1904, but little actual business has been done. Prices are as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Wire Nails—The local mills are closed down this week for stock taking and repairs. We quote as follows: $2.40 per keg in carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

Cut Nails—Business is very quiet at unchanged prices. We quote: $2.45 per keg f.o.b. Montreal; car lots, $2.40.

Fence Staples—There is some inquiry for 1904 delivery. Prices are steady and unchanged. We quote as follows: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c extra.

Pressed Spikes—The discount is now 25 per cent.

Horsenails—After weeks of exceptional activity trade is now rather slack. We quote the following unchanged discounts: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—There is still some little activity but compared with the rush of a few weeks ago business seems quite slack. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.ob. Montreal only.

Sleighbells—The holiday trade in bells this season surpassed that of any previous year. There are still a few orders going out but there has been a big slackening this week. We quote: Back straps, 30c. to $2 each; body straps, 70c. to $2.50 each; shaft gongs, 2 bells, 20c.; 3 bells, 35 to 60c.; 4 bells, 55c. to $3 each; brass team bells, No. 1, $1.90 per dozen; No. 2, $2.40 per dozen; No. 3, $2.70 per dozen; No. 4, $3.70 per dozen; No. 5, $4.65 per dozen; York eye bells, No. 10, $1.35 per dozen; No. 12, $1.65; No. 14, $1.90; saddle gongs, $1.10 to $3 each.

Skates—Trade is now commencing to slacken after a large and profitable run of holiday business. A few sizes of some lines are hard to obtain. We quote as follows: Halifax pattern, 37c. per pair; nickel-plated, 65c.; ladies' nickel-plated, 55c. to $1.25; ladies' concave nickel-plated, $1.45; plain hockey, 27c to $1.35; nickel-plated hockey, 60c. to $2.50; double end hockey, $1.65 to $3. Skate straps, 70c. to $1.35.

Hockey Sticks—One or two houses are cutting prices in order to clear this line of goods but for the most part prices are being well maintained as all wooden goods are firm in price. The holiday trade has been very active and sorting orders for hockey sticks have been among the principal items in a very dull week in wholesale trade. We quote: Best second-growth goalkeeper's, $3.80 per dozen: ash, $2.70; elm, $2.18: boys' elm, $1.10. Regulation pucks, $1.50 per dozen; boys', $1.15 per dozen.

Fire Shovels—Still in seasonable demand. We quote: No. 70, 39c. per dozen; No. 55, 55 to 82c. per dozen; No. 57, 82c. to $1.10 per dozen; No. 60, 70 to 88c. per dozen; No. 65, $1.10 to $1.23 per dozen; Duplex, No. 7, 96c. per doz.; No. 9, $1.20 per dozen; No. 11, $1.54 per dozen.

Snow Shovels—In seasonable request at unchanged prices. We quote the following prices: "Habitant," $2.50 to $2.75 per dozen; "Victor," 30 per cent. off: steel railroad shovels, 45 per cent. off.

Screen Wire Cloth—A typographical error last week made us quote at $1.45 1-2 per 100 square feet; the price is $1.42 1-2. An advance on this price is considered probable.

Galvanized Wire—This has been a quiet week. There are some inquiries for 1904 business, but we have not heard of any large sales this week. We quote the following unchanged prices: No. 5, $3.70; Nos. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b Cleveland; No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12 1-2c. per 100 lb. extra charged.

Barb Wire—There is considerable inquiry for 1904 delivery. We quote again as follows: $2.80 per 100 lb. f.o.b. Montreal, and $2.55 f.o.b Cleveland. Carlots of 15 tons, $2.45 f.o.b. Cleveland.

Smooth Steel Wire—A quiet market with no new features to note. We quote: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.: spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.: hay-baling wire, 20 to 25c.

Fine Steel Wire—Trade is quiet at present. The discount continues 25 per cent. with net extras as follows: 1 and 2-lb. hanks, 25c. per 100 lb.: 1-2-lb. hanks, 37 1-2c., and 1-4-lb. hanks, 50c.

Brass Wire—Business is fair at unchanged discount, viz., 60 per cent.

Copper Wire—Business fair: discount 60 per cent.

Rivets and Burrs—A quiet trade is reported at unchanged prices. We again quote as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.: swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—Trade is fairly active but the recent reduction in price has not stimulated it very much. We quote: Carriage bolts, common ($1.00) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1.00) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1.00) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3.00) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes, 4c. per lb. off; nuts, hexagon, all sizes, 4 1-4c. per lb. off.

Washers, 45 per cent. off.

Cutlery—The holiday trade has been the best in years. All kinds of cutlery are in excellent demand. Jobbing houses have to order many months ahead in order to have their orders filled by the English and German manufacturers.

Screws—There have been a few sorting orders during the week but trade is very quiet. We quote the following: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—A few sorting orders are still coming in. Trade is on the dull side. We again quote as follows: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

Lanterns—Prices remain unchanged. Our qoutations are as follows: Lift, hinged or tilt, $4 to $4.25 per doz.; cold blast No. 2, $7 to $7.50; painted dashboard, $6.50 to $6.75; plain dashboard, $6 to $6.25; searchlight, $20 to $24 doz.; brass cold blast, small, $9.75 to $10.

Cordage—To the remarks in these columns last week and the special article on the cordage situation there is nothing to add. The position of manila hemp is considered very strong statistically and prices throughout should be very strong in consequence. Cotton rope and twine are advancing in price. We again quote as follows: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11c.; single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 20c.; cotton twine, 20 and 23c. for 3 and 4 ply. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 27 to 28c.

Building Paper—Trade is very quiet just now, but manufacturers are well satisfied with the volume of business for 1903. We quote as follows: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

Firebricks—Trade is still very disappointing. English are quoted at $16 to $22 per 1,000 and Scotch at $17 to $22.

Cement—Business is absolutely dead. We quote as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex store, and American, $2.20 to $2.40 ex-cars.

Plumbing Goods.

There has been some slackening in the demand for plumbing supplies and trade this week can scarcely be described as active. Iron pipe is in very good demand for the season.

Lead Pipe—A fair trade is reported at unchanged prices. Composition and waste are selling at 8c. and ordinary at 7c. The discount is 35 per cent.

Iron Pipe—As noted above, business continues remarkably good for the season. We may repeat remarks made before as to concessions from prices quoted. For good orders discounts as high as 10 per cent. are obtainable. We quote: Standard pipe, per 100 feet, in lengths under 19 feet—black, 1-8-in., $2.30; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55. Galvanized—1-4-in., $3.20; 3-8-in., $3.45; 1-2-in., $3.90; 3-4-in., $5; 1-in., $7.20; 1 1-4-in., $10.05; 1 1-2-in., $12.20; 2-in., $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in., $4.20; 3-4-in., $5.25; 1-in., $7.55; 1 1-4-in., $10.55; 1 1-2-in., $12.75; 2-in., $17.60. Galvanized—1-2 in., $5.20; 3-4-in., $6.65; 1-in., $9.55; 1 1-4-in., $13.25; 1 1-2-in., $16; 2-in., $21.

Soil Pipe and Fittings—In steady request at the following unchanged discounts from the list prices: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—The demand is steady. Prices are reported very firm. We quote: Wire solder, 17 1-2c.; bar, 17c.

METALS.

As was to be expected there has been a considerable slackening in general business this week. One of the largest metal houses in Montreal assure us, however, that they have not experienced this year the total stagnation which has been customary at this season. Half of their staff are busy taking stock and the others are kept busy with the orders on hand. For forward delivery there has been very little business this week in tin plates or galvanized iron, although some large sales were made about a fortnight ago. Ingot tin is very firm in the primary markets and hence there has been a further advance in Montreal. Sales are being made at very close prices from stocks in hand. Copper is slightly weaker in primary markets at time of writing, but local quotations are well maintained.

Pig Iron—As was stated in our last issue, trade is now very quiet. There are very few, if any, sales for forward delivery. Londonderry iron will be on the market very soon. Our quotations are as follows: Summerlee, $19.50 to $20; Carron, No. 1, $21; do., No. 3, $18.50 to $19; Middlesboro', No. 3, $17 to $17.50; Ayersome, No. 1, $20; do., No. 3, $19.40.

Bar Iron—Business is very quiet this week. Prices as quoted in last issue are unchanged. We again quote: Merchants' bar, $1.85; horseshoe iron, $2.10; forged iron, $2.05.

Black Sheets—Trade is fairly active at present; prices are unchanged. We quote as follows: 28 gauge, $4.25; 26 gauge, $2.40; 22 to 24 gauge, $2.35; 18 to 20 gauge, $2.30, and 8 to 10 gauge, $2.40.

Galvanized Iron—Some large orders were booked a couple of weeks ago but trade this week shows little activity. We again quote as follows: Gorbal's "Best Best," $4.30; 28 Queen's Head, $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates—Business this week has been practically at a standstill, although some large sales were made about two weeks ago. Owing to the increasing strength of the tin market, prices for tinplates are very firm. We quote generally: Cokes, $3.75 and charcoals, $4.

Ingot Tin—Primary markets show increasing strength and it would scarcely be possible to fill orders with new stock at the lowest prices which are quoted by Montreal houses. These prices are only possible when houses have stocks on hand. We quote 31 to 32 1-2c.

Terne Plates—Prices are unchanged. We quote: $6.75 to $7.

Coil Chains—A fairly active trade is reported at the following unchanged and steady prices: No, 6, 10c.; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 5-8-in., $4; 7-16-in., $3.80; 1-2-in., $3.70; 9-16-in., $3.55; 5-8-in., $3.35; 3-4-in., $3.30; 7-8-in., $3.25; and 1-in., $3.20, with 10c allowance on carlots.

Canada Plates—We quote: 52s., $2.40; 60s., $2.45 to $2.50; 75s., $2.55; full polished, $3.60, and galvanized, $4 to $4.10; galvanized, 60s., $4.25 to $4.35.

Steel—Business is only fair. We quote: Sleighshoe, $1.95 to $2; tire, $2 to $2.10; spring, $2.75 to $3; reeled machinery, $2.75 to $3; toe calk, $2.60; machinery (iron finish) $2.50; square harrow, $2.50.

Tool Steel—A satisfactory volume of business is passing at the following unchanged prices: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Jonas & Colver's, 10 to 20c; "Air Hardening," 50 to 65c. per lb.; Conqueror, 7 1-4c.

Ingot Copper—Primary markets are slightly weaker than at the time of our last report, but local prices are being well maintained. We quote $13.50 to $13.75 per 100 lbs.

Pig Lead—Quoted at $3.20 to $3.30.

Sheet Zinc—A fair amount of business is passing at steady prices. We quote $6.15 to $6.25 for cash lots; smaller quantities, $6.50.

Zinc Spelter—The price is nominally 6c., but it is understood that concessions are obtainable for good orders.

Scrap Metals—Trade this week appears to be absolutely dead. In the absence of actual transactions quotations are merely nominal. We quote as follows: Heavy copper and wire, 9 1-2 to 10c per lb.; light copper 10c.; heavy red brass, 10c.; heavy yellow, 8 1-2c.; light brass, 5 1-2c.; lead, 2 1-4 to 2 1-2c.; zinc, 2 3-4 to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $13 to $15; stove plate, $12; mallable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers 6 to 6 1-2c. per lb.

Ashes.

There are very few offerings at present. Prices as quoted are unchanged.

First pots, per cwt	5 95	6 00
Seconds	....	5 55
Pearls, per 100 lb	7 00	7 25

Hides.

Beef hides have dropped another half cent. Receipts from country points are large. We quote:

No. 1 beef hides	0 08	0 08½
No. 2 "	0 07	0 07½
No. 3 "	0 06	0 06½
Lambskins	....	0 75
No. 1 calfskins	....	0 10
No. 2 "	....	0 08

ONTARIO MARKETS.

HARDWARE.

Toronto, January, 2, 1904.

THE new year opens with a much stronger spirit of optimism manifesting itself in all branches of the hardware trade. Manufacturers and wholesale dealers are busy stocktaking, and the general verdict is that buying has been more active in all lines than was anticipated. Buying for Spring delivery has opened up nicely and from the size of orders received it is clear that a good Spring trade is counted on. The only cloud in the horizon is the fear of United States competition. The danger of that is likely to be magnified for political purposes, yet it is clear that in many lines there is a more determined effort on the part of United States producers to get rid of some of their surplus product on the Canadian market. This may have an unsettling effect on some lines, but the general disposition is to keep prices firm. Manufacturers of screen wire cloth have stiffened their quotations, the figures now being $1.50 per 100 square feet. The prices on spring hinges for 1904, first noted last week, still hold good. There is a good movement of seasonable lines such as sleighbells, skates, hockey sundries, snow shovels, etc. There is a big movement this year in particularly heavy shovels. Building paper is also active. Prices have been fixed for three months at present quotations. Cotton cordage is still firm but present prices hold good.

Screen Wire Cloth—New prices go into effect to-day, the quotations now being $1.50 per 100 square feet, an advance of 5c. There is not likely to be any United States competition in Canada on this line as the works of one of the largest producers in the United States were destroyed by fire a few days ago.

Spring hinges—Prices quoted for the year are as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Wire—There is very little doing, but prices are steadily maintained.

Wire and Cut Nails—A few orders for later delivery are coming in. Prices steady with the base price $2.45 per keg f.o.b. Toronto.

Screws—Prices are fairly steady. A moderate trade is doing. We quote as follows: Flat head bright, 87 1-2 per cent discount; round head bright 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Business is quiet and prices unchanged. Our quotations are: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—There are still some United States bolts and nuts offering, but the sale of them is not large. Prices are steady. We quote as follows: Carriage bolts, common ($1 list), 3-16 and 1-4-in., 60 per cent.; 5-16 and 3-8-in., 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—The big advance in cotton cordage is still maintained, but no further increase is noted this week. Our quotations are as follows: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11 1-2c.; single lathyarn, 11c.; double shingleyarn, 11 1-2c.; single shingleyarn, 11c.; sashcord "Hercules," 29 to 30c.; "Star," 36 to 40c.; cotton rope, 3-16-in. and up, 20 1-2 to 22c.; 5-32-in., 25 to 27c.; 1-8-in., 25 to 28c.; cotton twine, 3-ply, 22 to 24c.; 4-ply, 26 to 28c.

Cutlery—There is not much doing at this moment, but there has been a good demand and a nice trade is anticipated.

Skates—The rush of orders is already beginning to have its effect on stocks held here, some sizes being exhausted. Prices are steady.

Harness—A particularly good demand for sleighbells and horse robes is reported, at steady prices.

Snow Shovels—A nice trade has been done, a feature being the demand for heavy shovels.

Woodenware—Business is quiet. We quote per dozen: Washboards, Victor, $1.35; Crown, $1.45; Improved Globe, $1.60; Standard Globe, $1.70; Original solid Globe, $2; Superior Solid Back Globe, $2.15; Jubilee, $2.10; Pony, 95c.; Dominion King (glass), $3.10. Tubs, No. 0, $10.50; No. 1, $8.50; No. 2, $7.50; No. 3, $6.50. Pails, No. 1, 2 hoops, $1.75 and $1.90.

Building Paper—Building paper is dull this week. We quote: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c. per roll.

Cement—There is very little cement moving. Prospects are that the market will brighten early in January. We quote the following prices: Canadian Portland at $2.05 to $2.65 Toronto, and $1.65 to $1.90 at the works; American Portland, $2 Toronto.

Firebricks—The market for firebricks is quiet at present. Our quotations are: 28 to 33c. for English, and 30 to 35c. for Scotch.

PLUMBING GOODS.

The activity of recent weeks has quieted down and now, with the exception of city trade there is little doing. Iron pipe prices are still easy, but a steady market on nearly all materials is noted.

Lead Pipe—There is not much doing. We quote as follows: Lead, 7c.; lead waste pipe, 8c.; discount 35 per cent.

Soil Pipe and Fittings—A moderate trade continues; prices unchanged. We quote: Light soil pipe, 45 and 5 per cent.; light soil pipe fittings, 50 and 5 per cent; medium and extra heavy pipe and fittings, 55 and 5 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

Iron Pipe Fittings—Business is keeping up fairly well. We quote dising up satisfactorily. We quote discounts as follows: Malleable fittings, 15 per cent.; cast iron (not standard), 57 1-2 per cent.; headers, 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; unions, 55 per cent; nipples, 2-in., 65 per cent.; nipples, 2 1-2 to 6-in., inclusive, 60 per cent.

Copper Range Boilers—A fair busineess is doing, with discounts at 15 per cent.

Brass Goods.—A fair trade is doing, especially in steamfitters' brass goods. Prices are steady throughout.

Iron Pipe—Though prices were materially lowered last week the market is still rather easy. We quote f.o.b. Toronto as follows: 1-8-in., $3.25; 1-4-in., $2.40; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55; 2 1-2-in., $17.25; 3-in., $22.75; 3 1-2-in., $28.75; 4-in., $35.25.

METALS.

There is little doing. Factories, generally speaking, are stocktaking and are busier fixing up their plants than buying raw materials. Prices are, on the whole steady, and all the indications point to a stronger market except in bar iron, which shows another decline of 5c.

Pig Iron—A better feeling is manifested, partly as a result of the stronger situation in the United States. Some iron is coming in from Sydney, N.S., at present. Prices of Midland and Hamilton iron are nominally $18.50 for No. 1 and 18 for No. 2 at the mills.

Bar Iron—Prices are again 5c. lower There is not much doink Quotations are now as follows: $1.80 f.o.b. Toronto for extras cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft. 20c., over 20 ft. by special agreement according to length and size.

Black Sheets—Prices are unchanged, a fair business doing. We quote: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—An active demand at steady prices. Prices are unchanged. We quote: All dull, $2.60; half-polished, $2.70; and all-bright, $3.50.

Tin—Prices continue to advance on outside markets. This has stimulated buying here as local quotations have not been changed yet. We quote prices at $29.50 to $30.50.

Galvanized Sheets—A fair trade is doing at steady prices. We quote: Queen's Head, $4.25 to $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.25 for 28 gauge; Gordon Crown, $4.25 for 28 gauge.

Tinplates—A better feeling prevails. There is more competition from United States houses than formerly. A more active demand is noted. We quote as follows: Coke plates, bright, 14x20, $3.75; charcoal plates, $4.25.

Copper—Prices in British and U. S. markets are still stiffening. The local market, while considerably stronger, shows no change, prices being as follows: Ingot copper, $14, and sheet copper, $20 per 100 pounds.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—A considerable advance is reported at outside market, but local quotations are steady. We quote: $3.30 per 100 lb. for pig lead and $3.65 for bar lead.

Zinc Spelter—Prices show an upward tendency at primary market, but the local situation is unchanged at 6 to 6 1-2c. per lb.

Zinc Sheets—The market is firm and a fair business doing. We quote: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half, at 18c., and wiping, 17c.

Hides, Skins and Wool.

Very little change is noticeable in the market this week. Dealers report a moderate demand with prices ruling at last week's quotations. We quote:

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

(By our own correspondent.)

A RATHER unique method of repairing a vessel when a dry dock of sufficient capacity is not available is being tried with the steamer Moana of the Canadian-Australian line. The steamer was injured by striking her stern on a reef at the William Head quarantine station the day she arrived from Sydney. Since then, the Government dry dock at Esquimalt has not been free, as the flagship of the North Pacific squadron, H.M.S. Grafton, was in for overhauling, and now the dock will be required for some weeks to repair H.M.S. Flora, which ran on the rocks of Village Island and was badly injured. The rule applying to the dock is that the Imperial navy vessels must have precedence, and the navy officials in this instance cannot very well do anything else, as the Flora is badly used up and useless until she is repaired. The proposition which is being attempted with the Moana is to build a cofferdam round her stern and when she is fitted up and beached the cofferdam will be pumped out. The cofferdam has been built and is now being fitted to the vessel. By the beginning of the week it will be ready for emptying. The work of repairing, granted that the cofferdam idea is a success, will take two weeks or more.

* * *

Another shipping accident which occurred up the coast this week gives opportunity for the display of another emergency plan of repairs. The C.P.R. steamer Amur, which is in the Skagway service, ran on a reef at the entrance of the harbor of Port Simpson, in a dense fog in the night of December 16. While news of her accident was being brought down by the steamer Farallon, a Seattle steamer, the Amur was anxiously awaited. The Dominion Government telegraph line between Simpson and Telegraph Creek was out of repair, so no advices were received. The steamer lost her propeller and had her tail shaft broken, as her stern struck the reef, so that she was quite helpless. It was fortunately within half a mile of the wharf at Port Simpson and a small steamer was utilized to tow her in. A new tail shaft and propeller were sent up on the steamer Danube and Capt. Troup, superintendent of the C.P.R. steamers, and W. J. Macgowan, superintendent engineer, went north to oversee the shipping of the new shaft and propeller. The steamer will be beached for the purpose, on a sand spit near the wharf. The plates of her outside bottom will not be repaired as her double bottom will prevent her making water.

The accident has brought the harbor of Port Simpson rather prominently into notice, seeing that there has been so much talk of making it the terminus of the Pacific of the new Canadian transcontinental line. The entrance is so full of sunken reefs, that the opinion is freely ventured here, that it will never be the terminus. There are many advocates of Kitamaat Arm, a land-locked inlet, much like Burrard Inlet, Vancouver's famous harbor. The only drawback is that the former is so far from open water, that is, there is a long channel which makes it a slow place to get into. Otherwise it would be an ideal location for the seaport terminus of a great railway.

* * *

A. F. Cotton, C.E., of New Westminster, an engineer well known on this coast, returned on Sunday with a party of men from Skeena River, where he has been busy for the past three months on a preliminary survey. Mr. Cotton would not talk of his work, saying that he would have to report to his company first. It is understood that he was making the survey in the interests of the Grand Trunk Pacific people. He was up the Skeena River as far as Hazelton and covered much of the territory intervening between that point and Port Simpson, as well as on the alternative route from Kitsalas Canyon to Kitamaat. For the latter, the only alteration necessary from the route to Port Simpson, is merely to branch off from the Skeena River at Kitsalas Canyon, which is about 125 miles up from Simpson. From that point, a line could follow a valley to Kitamaat Arm.

The cannerymen and cannery supply dealers will begin receiving their stocks of tinplates and other cannery hardware, imported from the Old Country early in the year. One of the steamers of the Blue Funnel Line, the Oanfa, is due to arrive in port here or at Victoria from Liverpool about January 1, and another, the Peleus, before the middle of the month. Each of them will discharge here large quantities of tinplate, acid, lead, solder, and other supplies. The placing of the steamers of the China Mutual and Ocean Steam Navigation Co. lines, in the direct Pacific coast service between here and Great Britain, has had the effect of cutting down the quantities of cannery supplies brought by sailing ships. Formerly all the heavy goods of these classes came by sailing vessels round the Horn. This year the steamers coming via the Suez, India and the Orient have secured the bulk of the traffic.

* * *

The fact that the American Tinplate Co., the tinplate combine of the United States, has established an agency in Vancouver shows that this company has started to seek business here, and as the canneries are the heaviest buyers of tinplate it is likely the British product will have a keen competitor for the trade of this Province. Of course it is claimed

151 Hastings St. W., VANCOUVER, B.C., and LIVERPOOL, ENGLAND.

for the United States product that it is better tinned, and that it is cheaper. As to the former, a test should settle it, and as to price, if the trade goes to them instead of sticking to the Welsh made article, that will be evidence that it is cheaper. As cannery supplies, such as tinplate, are practically bought a year ahead, the stock required for the coming season will not be sold by the American concern, but the assertion is made that the trade will be divided up with them for the following season. As the run of sockeye is not anticipated to be large this year, but the next year's catch is expected to be heavy, the requirements will be greater another season.

* * *

Further reports received from Cumberland, where the Dunsmuir Company has struck a seam of anthracite coal in their mines, seem to confirm the impression that a genuine find has been made. It is said the seam develops greater dimensions with further exploration. The quality is claimed to be superior to anything but that of the best Pennsylvania, which it resembles, and which it is expected to fully equal. The value of such a find in this Province, where all the coast-mined coal is bituminous, cannot be over-estimated. The search for anthracite coal in paying quantities in the coast district of British Columbia has long been carried on, and the Wellington Mines Co., the Dunsmuirs' Company, has been assiduous in their efforts which seem at last to have been crowned with success.

* * *

Railway building is not stopped by Winter on the coast, the V. W. & Y. R. Co. being still busy with tracklaying on their line between this city and New Westminster. In New Westminster they have built right along the Fraser River between the water and the C. P. R.'s track. The latter company has been disputing the right of the V. W. & Y. R. before the Railway Committee of the Privy Council, but that body has held that the city of New Westminster which gave the right to the V. W. & Y. R., is the undisputed owner of the 25 feet strip of land between Front street and the edge of the bank of the Fraser River, within the city limits. The expectation is that the rails will be laid, and the line completed into Vancouver from the Fraser before the New Westminster bridge across the river is completed. The work on the latter is progressing well and is expected to be finished in less than three months.

THE GROWTH OF A FILE BUSINESS

FOR many years up to 1880 old England supplied nearly all files and rasps used in Canada; shortly after that year American manufacturers sought this market with their increment-cut machine made files and gradually succeeded in replacing the English hand-made files, on account of the quality and price. Several file factories have been in operation in different parts of the Dominion, but for want of experience and the capital necessary to enable them to produce a first-class article, none of these factories succeeded (with one exception).

In September, 1901, the Nicholson File Co., of Providence, R.I., the largest file manufacturers in the world, whose daily production in their six factories exceeds 10,000 dozen, were induced to come to Canada and purchase the plant of the Globe File Co., Port Hope, Ont. Shortly after taking possession of these works they commenced remodelling the buildings, and during the past year have equipped these works in every department with the most modern machinery necessary to enable them to produce files and rasps equal in every respect to the celebrated Nicholson increment brand made at their Providence works. They have also brought in from their other factories experts necessary for each branch of the business and as a consequence they are now producing daily at these works 600 dozen files and rasps in the different sizes, shapes, and cuts, required to meet the wants of the various industries located in the different parts of the Dominion, which has enabled them to secure a large share of the file business of the Dominion.

An experience of over 35 years has placed the Nicholson File Co. in a front rank in this line of business, as during that time they have given their undivided attention to the manufacture of files (files only) and to this may be attributed their success.

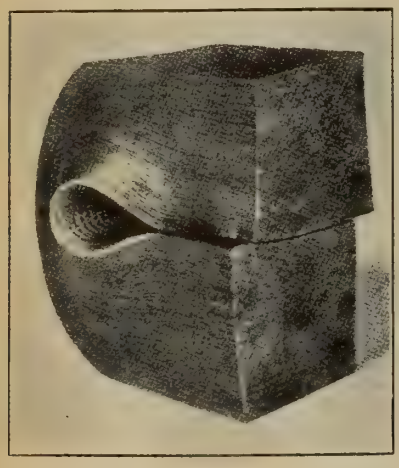
During the past five years they have had a very large trade in Great Britain, more particularly for their "Nicholson" and "Kearney & Foot" brands, and should England adopt a tariff giving her colonies a preference, the Nicholson File Co. would be prepared to supply their English customers from their Dominion factory. They have invested a large amount of money in Canada, and have great confidence in the future growth of our Dominion.

The sale of English made files now is not large in Canada, although they have a preference of 10 per cent. as against the United States or Germany. In 1865 England exported a large quantity of files to the United States, but shortly after the war manufacturers started to spring up in the latter country and they gradually, but surely drove the English article out of their market with the assistance of a high tariff (which tariff still exists). Competition among themselves became very keen. Now they sell their goods in Great Britain and other parts of Europe. The Nicholson File Co. have expended a large amount of money to enable them to produce a sufficient quantity of goods to meet the demand of this growing country for the next 10 years. They give employment to about 125 hands and naturally the town of Port Hope has benefited by having such an industry in their midst.

BEARDSHAW'S SORBITIC STEEL.

IN our issue of October 17, 1903, reference was made to some experiments in steel which are being made by the Baltic Steel Works, of Sheffield, England, with the object of increasing its tensile strength. While in Canada a few months ago, Mr. W. F. Beardshaw, a representative of the company, succeeded in interesting the railways in the results of these experiments which, as we stated before, were first made at the suggestion of the War Office which required steel of extra tensile strength for the light artillery. Considerable success has attended these efforts as is evidenced by the following extract from Engineering, to which our attention has been called by Mr. Alexander Gibb, of 13 St. John street, Montreal, the Canadian representative of the company:

"We illustrate below a specimen of the 'sorbitic steel' made by Messrs. J. Beardshaw & Son, Limited, of the Baltic



Steel Works, Sheffield, which possesses most remarkable and valuable physical properties. The specimen shown was cut from a 5 1-2-inch bar, and was originally 1 1-2 inches square. It has, as our illustration shows, been bent double, and though it has been flattened a little in the process, there is not the sign of a crack anywhere about it, even although the edges of the specimen were left dead sharp, in place of being rounded off, as is commonly done, before making a bending test of steel. The makers inform us that in its original state the bar from which this specimen was cut had a breaking strength of 35 tons, an elastic limit of 18 tons, and an extension of 29 per cent. in 2 inches. It was then subjected to the firm's special heat treatment, which has conferred on it the remarkable toughness indicated in our illustration; and on making new tensile tests, it was found that its strength had been raised to 48 tons, and the elactic limit to 38 tons, whilst the extension on 2 inches was 23 per cent., and the reduction of area on fracture 47 1-2 per cent. A steel of this kind should prove most valuable for very many purposes where lightness and strength are required in combination. It is not in any way a hard steel, and can be cut and filed easily. Possibly even these steels may at a later date find application to structural purposes. Its makers even now can supply it in fairly large sizes, and they claim that they can readily attain even greater strength and toughness if such is required by their customers."

Business Changes

ONTARIO.

THE pattern-house and office of The J. Inglis Co., manufacturers of engines and boilers, Toronto, have been destroyed by fire. Loss covered by insurance.

The business of The Wakefield Mica Co., Ottawa, is being liquidated.

J. Lanthier, general merchant, Wendaker, has assigned to W. A. Cole.

J. W. Watson, general merchant, Minden, has advertised his business for sale.

Bramin Bros., millers and brickmakers, Berlin, have advertised their brick plant for sale.

J. Henderson, hardware merchant, Collingwood, is advertising his business for sale by tender.

The Canada Cabinet Co., manufacturers of office files, Gananoque, have been damaged by fire.

Adams Bros., wholesale and retail saddlers and hardware merchants, Toronto, have been damaged by fire.

Watt Bros., machinists, Gananoque, have been damaged by fire and water; loss partly covered by insurance.

D. Aitchison & Co.'s lumber and planing mill, Hamilton, has been damaged by fire; loss partly covered by insurance.

T. Houard, of T. Houard & Son, contractors, Toronto, have assigned to E. R. C. Clarkson. A meeting of creditors was announced for 29th inst.

QUEBEC.

L. D. Vezina, joiner, Quebec, has registered.

J. A. Pare, general merchant, Lachine, is dead.

F. Brunet, plumber, Montreal, has registered.

The Dominion Bag Co., Montreal, have been damaged by fire.

The Bishop Engraving & Printing Co., Montreal, have sold out.

The Dominion Pneumatic Tool Co., Montreal, have registered.

The Bark River Lumber Mill, St. Alexis des Monts, have registered.

Lefrancois & Laqueux, wood and coal dealers, Quebec, have registered.

H. Girard, general merchant, St. Paul's Bay, has effected a compromise.

The assets of Price Bros., general merchants, Iberville, have been sold.

The Montreal Waste Paper Co., junk dealers, Montreal, have registered.

Cole & Cameron, wholesale paper dealers, Montreal, have dissolved partnership.

The assets of A. D. Spear, general merchant, St. Adolphe de Houard, have been sold.

W. Curry, of W. & F. P. Curry & Co., wholesale general merchants, Montreal, is dead.

Levine Bros., general merchants and fish dealers, Fox River, have compromised.

N. H. Turcotte, general merchant, St. Eulalie, is offering to compromise at 45c. on the dollar.

P. Licard, plumber, Montreal, has assigned; meeting of creditors announced for 31st inst.

Wilks & Michaud have been appointed curators to J. O. Lemire & Co., general merchants, St. Guillaume d'Upton.

J. Belisle & Frere, general merchants, St. Stanislas de Champlain, have made an assignment. Their assets have been sold.

MANITOBA AND N.W.T.

Bell Bros., general merchants, Regina, have been succeeded in business by A. Bell.

NOVA SCOTIA.

Consent has been registered for M. O. Kirkpatrick, general merchant, Diligent River, to do business in her own name.

NEW BRUNSWICK.

R. R. Call, coal dealer, Newcastle, is dead.

J. T. Jordan, proprietor of a saw mill, Lower Queensburg, has made an assignment. Meeting of creditors to be held January 4.

BRITISH COLUMBIA.

W. Powers' sawmill, Midway, has been damaged by fire. Loss partially covered by insurance.

The Pittsburg Metal Market.

From The Iron Trade Review, December 24, 1903.

Pig Iron.—The Northern pig iron market is a trifle weaker this week than last and No. 2 foundry for spot shipment has sold as low as $13.85, Pittsburg, while most brands are held at $14, with a few quoted at $14.25. There has been very little doing, the radiator buying for delivery the first quatrer of foundries east of here doing the most next year at prices equivalent to $14.25, Pittsburg. The amount aggregates about 3,000 tons. There have been further sales of Northern forge iron amounting to about 5,000 tons at prices ranging from $13 to $13.50, Pittsburg. Bessemer iron is also weaker and is quoted at $13.25 to $13.50 at the furance, while basic has sold at $12.90 at valley furnace. Southern operators are firmer, holding at a minimum of $9.50, Birmingham, for No. 2, while forge is quoted at $8.25, Birmingham. For delivery the first quarter as high as $10, Birmingham, is asked by some furnaces. The feeling in the South, judging from these prices, is more confident than that prevailing among the furnacemen in the North.

Bars—There is no buying of either iron or steel bars to cover more than immediate requirements. Quotations on steel bars are being well maintained but on iron bars 1.25c. Youngstown is being done on desirable tonnages. We make the following quotations: Bessemer steel bars, 1.30c.; open-hearth, 1.40c.; plow beams and cultivator beams, 1.30c. net; channels, angles, zees and tees, Bessemer, under 3 inches, 1.40c.; common bar iron, 1.30c. to 1.35c., Pittsburg. The following differentials are maintained on steel: Less than 2,000 pounds of a size and not less than 1,000 pounds, 10 cents advance; less than 1,000 pounds of a size, 30 cents advance. Hoops are quoted at 1.65c., full extras, in 250-ton lots and over, and 1.75c. in less than 250-ton lots. Bands are quoted at 1.30c. and take the bar extras.

Pipes and Tubes—A revised list of discounts on both iron and steel boiler tubes has been issued by the largest manufacturer. It carries a reduction on all sizes averaging about 10 per cent. A revision of the pipe list is looked for by consumers and no doubt will reach the trade by the first of the year. The pipe market generally continues quiet. We quote carload lots to consumers, f.o.b. Pittsburg, plus freight according to Tube Rate Book to destination:

MERCHANT PIPE.

	Steel Pipe. Black.	Steel Pipe. Galv.	Wrought Iron Pipe Black.	Wrought Iron Pipe Galv.
	p. c.	p. c.	p. c.	p. c.
⅛, ¼ and ⅜ inch	68	58	65	55
½ inch	70	60	67	57
¾ to 6 inch	75	65	72	62
7 to 12 inch	69	59	66	56
Plugged and Reamed				
1 to 4 inch	73	63	70	60
Extra strong plain end				
½ to 8 inch	67	57	63	53
Threads only	66	56	62	52
Threads and couplings	65	55	61	51
Double extra strong plain end				
½ to 8 inch	59	49	55	45
Threads only	58	48	54	44
Threads and couplings	57	47	53	43

NOTE.—Orders for less than carload will be charged at 12½ per cent. advance. Extra and double extra strong cut lengths, lower random discounts by 10 per cent. net for 6 feet and longer, and 15 per cent. net for 3 to 6 feet.

Wire and Wire Nails—A fair amount of business continues to be done despite the Winter season. Demand for cut nails has fallen off heavily, however. Concessions continue to be made and average as high as $4 to some delivered points. We quote as follows: Wire nails, carload lots, to jobbers, f.o.b. cars Pittsburg, $1.85 to $1.90; plain wire, carload lots, $1.75 to $1.80; barb wire, carload lots, $2.15 to $2.20; staples, carload lots, $2.05 to $2.10. Galvanizing, 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less than carload lots a further advance of 10 cents is charged. Steel cut nails are quoted as follows: Carload lots, $1.90 and less than carload lots, $1.95, f.o.b. Pittsburg, plus freight to point of destination. Iron cut nails are $1.90 in carload lots and $1.95 in less than carload lots. Terms, 60 days less 2 per cent. off in 10 days.

Coke—Furnace coke for spot shipment is now being sold on the basis of $1.60 at the ovens, while strictly Connellsville foundry coke is quoted at $2 to $2.25. For delivery through the first half of the year furnace coke is quoted at $1.50 to $1.65 and foundry at $1.90 to $2.15. These quotations apply to strictly high grade Connellsville coke. However, a few of the operators in the region will not entertain any such prices and ask $2.25 and in some cases as high as $2.40 for foundry coke. For the week ending Saturday, December 12, the output of the upper region amounted to 113,306 tons and that of the lower region 41,859 tons. About 13,000 ovens are idle in both regions.

TRAVELLERS IN HOLIDAY SEASON

Editor "Hardware and Metal":

Several merchants got into an interesting discussion the other day as to what was the best time to withdraw travellers for the holiday season. The agreement reached by them was that December 1 was about the right time. This gave them a chance to mark off all their goods and place things in proper shape before the rush commenced. Several travellers were of the same opinion and felt that no more business was done by the travellers after December 1 than could hav been done previous to that date. They had to "fill in" a week or two more time on the road, however, merely because others were doing so..

Several merchants have made it a strict rule not to see travellers after December 1 until new year starts again. There is no reason why this could not be arranged with all the leading houses and their travelling staffs and give the merchants and their clerks a chance to make holiday displays and arrange their stocks and stores ready for purchasers. Perhaps some other merchants and travellers can give their views on the question.

TRAVELLER.

Montreal, December 24, 1903.

THE VALUE OF THE PREFERENCE.

AN excellent illustration of the value of the Canadian preference to British manufacturers has been given in the award this week of the contract for 6,000 gross tons of 80-lb. steel rails to Chas. Cammell & Co., of Sheffield, Eng., through their agent in Canada, the estate of the late James Cooper, Montreal.

The quotations of the United States Steel Corporation were slightly lower than those of their British competitors, but the difference in the duty effected by the preference was sufficient to make the British quotation the more favorable, so the order goes to Sheffield.

A saving of $24,000 over the prices on the last contract is effected on this order, which represents the balance of rails required to complete the track-laying to the present northern terminus of the railway, which is New Liskeard, a distance by the railway of 112 miles from North Bay. Rails are now laid to the 57th mile, and the service is being conducted by the contractor to the end of the rails, where connection is made over a Winter road with Haileybury and New Liskeard. Tenders have been invited for the rail fastenings, which will probably be furnished by a Canadian concern.

STOVES AND TINWARE.

THE THOS DAVIDSON CO. DINNER.

THE Seventh Annual Banquet, tendered by the president and directors of The Thos. Davidson Mfg. Co., Montreal, to the travellers and heads of departments, Wednesday evening, 23rd inst., was an unqualified success, eclipsing all previous records.

The function was held at the club rooms of the employes on Vinet street. These premises consist of a three-storey building, which the directors have generously placed at the disposal of their staff. The rooms are open through the day for the serving of meals to employes at cost. A plentiful supply of magazines is always in evidence, and a piano, lately installed, has helped many to pass a very pleasant and profitable evening. The president of the company, James Davidson, acted as chairman, and proposed the health of "His Majesty the King," which was immediately followed by the National Anthem. Telegrams and letters were read from several who were unavoidably absent.

E. Goodwill, in proposing the toast of "The Travellers," referred to the recent additions to the staff, and made feeling reference to the removal by death of one of their number during the year.

W. H. Morgan replied on behalf of the "Knights of the Grip" in a speech bristling with patriotism—the theme "Canada for the Canadians" being enlarged upon in a very eloquent and instructive manner.

T. Chas. Davidson, in a humorous speech, proposed the health of "Heads of Departments," coupled with the names of J. Williams, superintendent of factory, and Wm. Jones and Jos. Bodfish, also Dr. A. W. Haldimand, physician for the employes, and W. J. White, K.C., the attorney of the firm. The ready wit of the latter gentleman was much appreciated.

The toast of "The Ladies" was proposed by C. F. Shearer and replied to by W. C. Huff.

"The Absentees" was the toast proposed by Mr. Chadburn, particularly mentioning J. Taylor Webb, a traveller of long standing, who is representing the firm in Manitoba and British Columbia.

"Canada" was proposed by J. N. Young, who quoted statistics to show that the increase in volume of Canadian trade during the last five years had been more than one-third greater than that of any other civilized country on the face of the globe. This toast was enthusiastically honored and accompanied by the singing of the "Maple Leaf." Mr. Lachapelle made an able reply (in French).

J. N. Warminton, in a few well-chosen remarks, proposed the health of the "President and Directors," responded to by James Davidson. The presence at the banquet of A. Sauvageau and A. O. Gee, both of whom have been connected with the firm for over 30 years, is a practical proof of the good feeling which has always existed between employers and employes.

Mr. Gee and Mr. Bindley made a few remarks, touching on their long association with the company. J. Chalmers (the artist of the establishment) who designed the invitations and the menu cards (which were lithographed on tin), recited an original poem of his own composition, bringing in many local hits, which were much enjoyed. We enclose copy of poem.

TIN TYPES.

To make a speech is not so hard
For those of ready tongues;
To sing a song is not so hard
For those of powerful lungs.
As I's possessed of neither,
It's not so hard to understand
Why I can't speak like Morgan,
Or sing like Haldimand.
Though lacking these two qualities,
There's a third by me possessed,
I'm a connoisseur, a critic
Of all that is the best.

Now, the T. D. Co., we all well know,
We are here at their request.
With me you'll agree, the directors three,
Initials J. D., T. C. D. and E. G.,
Stand good for what 'er they attest.
To this fact we're not blind,
They are three of a kind,
Three of the very best.

Their enamelled quartette, known near and far,
As "Crescent," "Colonial," "Premier" and "Star,"
By good cooks are always possessed.
Their goods are the standard all over this land,
Whether lithographed, pressed, pieced or japanned,
They're better than anyone's best.

Our manager's next, a man full of zeal,
He has no time for theory, he believes in the real,
And from labor he's seldom at rest;
If you do your work right he'll not trouble you,
That's why I tell you that J. W.
Is one of the very best.

Our travellers next, hail fellows well met,
They do not give orders, but take all they get.
From the north, from the south, east or west,
While on the train they tell rude tales,
But on the road they make good sales,
And at that you can bet they are best.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

SITUATIONS VACANT.

WANTED—Hardware Clerk; steady employment to good man; state age, experience, and salary expected. The Western Hardware Co., Regina, Assa. (1)

WANTED — Immediately — First-class horseshoers; steady job to good, steady man; good wages. Apply to Wm. Farr & Son, Sarnia, Ont. (f)

PATTERNMAKERS — Two first-class marine engine patternmakers. Apply The Collingwood Shipbuilding Co., Limited, Collingwood, Ont. (f)

SITUATIONS WANTED.

WANTED—Experienced Traveller wants position calling upon hardware trade in Eastern Ontario, or manager of retail hardware store. Address Box 240, Gananoque, Ont. (1)

BY a young man with 20 years' experience in the hardware business, a position of traveller or in the warehouse; best of reference as to sobriety and ability. Address Z., 73 James street, Ottawa. (3)

ARTICLES WANTED.

ALWAYS in the market for lead and copper concentrates; advise particulars. Syracuse Smelting Works, Montreal. (2)

FOR SALE.

Sale of stock of hardware and shop supplies by tender. The extensive and old-established business of J. HENDERSON in Town of Collingwood. Owner retiring.

Collingwood is one of the most flourishing and progressive Towns in Canada and has brightest outlook for the future. It has largest and most up-to-date dry dock and shipbuiling plant on the Upper Lakes where largest vessels are built and repaired. It has also large saw mills, export meat-packing plant, flour mill, grain elevator, planing mills, tannery, foundry, etc., which give employment to a large number of hands. It has also near completion large steel manufacturing plant and rolling mills, wire mills, nail factory and furniture factory. It is headquarters of large line of steamboats which give it connection with all points on the lakes. Harbor is now crowded with steamboats which will fit out there in Spring. It is a terminal of Grand Trunk Railway and also an objective point of railways now under construction and projected. Written tenders for above stock will be received up to the 15th day of January, 1904 by the undersigned, from whom conditions and terms of tender and other information can be obtained on application.

Building for sale or rent.

Greetings

Wishing you all

A Very Happy and Prosperous 1904.

The THOS. DAVIDSON MFG. CO., Limited

MONTREAL.

The heads of the departments, a secret I'll unfold ye,
My twenty-one year old friend, Charley Shearer, has just told me,
And I give my word of honor it's no jest,
From January to December,
He cannot once remember,
When you didn't try to do your very best.

Now, those whom I have mentioned in quality are first,
There are others, self included, known as "seconds," not the worst,
In truth I know we're just as good's the rest.
Although not of the same stock,
We have all to punch the clock,
And at that I know a No. 2 is best.

JAY SEE.

Others who contributed with songs and recitations included W. J. White, K.C.; Dr. Haldimand, C. J. Cartledge, C. P. Clark, M. Lachapelle, J. Toupin, J. W. Strachan and W. E. Barrat.

The singing of "Auld Lang Syne" followed by the National Anthem brought a very successful evening to a close.

Canadian Iron at Manchester.

THE Manchester correspondent of the Ironmonger includes the following references to Canadian iron and steel in the last market report to hand, December 12: Canadian iron has become a serious competitor here, and the knowledge that this is the case is forcing on the market iron held in second hands at almost any price that can be got, whilst for delivery forward exceedingly low quotations are named.

Lincolnshire pig-iron makers at their usual fortnightly meeting last week decided upon a further reduction in their list-basis rates of 1s. per ton on No. 3 foundry and of 6d. per ton on forge qualities, and an unusual feature about the reduction is that No. 3 foundry, No. 4 forge, and mottled and white irons are all now quoted on the same basis. Lancashire makers nominally have made no change, but Derbyshire iron is, if anything, a trifle easier, although not actually quoted lower. Forge qualities, delivered Warrington, are quoted 6d. below last week's rates, but Canadian brands of forge iron are being offered at 47s., and could in all probability be bought still lower if offers for any quantities were forthcoming. Middlesborough iron has eased down from 6d. to 1s. per ton on recent quotations. Scotch iron is also easier, and both Eglinton and Glengarnock are to be bought at low (and practically at identical) figures, which in the case of Glengarnock are 2s. below what makers are quoting. Canadian and American foundry iron continues to be offered for delivery in this district, and sellers of the respective brands are competing keenly to secure orders. Heavy shipments of Canadian iron have already been arranged to this country, and large quantities of United States iron will probably come over as stiffening in cotton ships. . . . . Competition continues keen in billets, but low prices fail to bring forward any large weight of buying. American and Canadian billets can be readily bought at 4l. delivered in this district, and something under this figure would probably be conceded if anything like good offers were put forward. German billets remain at about 4l. 4s. c.i.f. for 4-inch and upwards, and 4l. 5s. for 2-inch and upwards, with English prices somewhat irregular, but nominally unchanged.

PERSONAL MENTION.

Mr. W. Williams, formerly secretary of the Laurie Engine Company, returned to Montreal last week after a month's business visit to England. We understand that Mr. Williams has secured several good agencies for English manufacturing firms, among them being John Birch & Co., Limited, London.

Mr. Thomas Wright, representative of H. S. Howland, Sons & Co., Toronto, in Manitoba, is on a visit to his home in Toronto and vicinity. Like most travellers covering the West Mr. Wright bears evidence of good treatment there having put on weight as well as dignity since his last visit to the East.

Mr. F. O. Lewis, of Lewis Bros. & Co., Montreal, president of the Canadian Wholesale Hardware Association, returned to Montreal on Christmas eve, after a flying visit to England. Mr. Lewis was in London for a week in connection with business affairs. He reports English trade conditions very dull.

Mr. A. H. Brittain, who has been for some time travelling representative for Mr. Walter Grose, manufacturers' agent, of Montreal, has severed his connection with his old employer and is now in business on his own account. Mr. Brittain is now agent for Black Bros. & Co., of Halifax, and his territory includes the two Provinces of Ontario and Quebec. Mr. Brittain's friends will regret his transition from hardware to codfish but they will joint with "Hardware and Metal" in wishing him every success in his new business venture.

Mr. Ralph Chamberlain, who succeeds Mr. A. H. Brittain as travelling representative for Mr. Walter Grose, manufacturers' agent, of Montreal, is an Englishman of the right type, and ready to adapt himself to conditions in the country of his adoption. He has had seven years' experience in the hardware business in the city of London and since he arrived in this country a few months ago he has been in the employ of Caverhill, Learmont & Co., of Montreal. Mr. Chamberlain will visit the important cities and towns of the Dominion in the interests of the manufacturers whom Mr. Grose represents. "Hardware and Metal" wishes him every success in his new position.

Window and Interior Displays

Timely Hints and Suggestions

THE most frequent excuse made by the merchant who neglects his window is that he has no time. Few in this day dare say that they do not think a well-dressed window sells goods. They would not risk setting up their opinion against that of the ninety-nine out of a hundred who insist upon the expenditure of much time and money on the display of goods seen by passersby. But they will hide behind the excuse that the time consumed is more than can be afforded in the store, implying by this that business is so brisk that the entire attention of the staff is necessary to wait on the customers.

Ask the same merchant how he would meet the contingency of an overflow of customers, and he would say that he would engage more clerks. And yet, although he will admit that in some cases at least, the tasty display of an article will sell it, he often cannot see that the employment of one more clerk for window dressing would mean a larger business. He is loath to add to his present staff, simply because, for the few additional dollars a week he would have to pay, there would not appear any direct, immediate return. An extra clerk is much more profitable when employed as a window-dresser than if he were engaged solely as a salesman.

But this cry is in almost every case made without thought. There are many minutes during the day which are idled away by all the clerks. These, if set apart for one clerk to be spent in decorating the window, would mean no additional help, and procure all the beneficial results of an attractive store. "I haven't time" is very often equivalent to "I have not the ambition to make time." Those time-consuming displays that cost much money in addition, are not a necessary part of the window plans. An excellent display can be arranged in far less time than is wasted every day in almost every store, and after a clerk gets experience, the time spent grows less and less. The plans should be thought of during the regular business or out of hours, and the arrangement can then be quickly worked out. If the merchant who "hasn't" time would make time, he would come to an appreciation of the value of good displays that would make them as important as any other branch of the business.

This Week's Illustration.

The articles in a hardware store are of such a varied nature that they admit of being used in the building up of figures and other schemes. Some time ago a drawing of a horse, driver and wagon, composed wholly of hardware articles, was shown. The accompanying illustration shows the head of King Edward, as constructed by Mr. Jos. W. Noyes for Geo. Allen's hardware store in Burlington, Ont.

Head of King Edward—Built by Jos. W. Noyes for Geo. Allen, Burlington, Ont.

The appearance is a striking likeness, and is decidedly clever in this way, as well as in the use of the different articles. The outline was first drawn on a black cloth stretched over a board background, four by four feet, the hardware being tacked on the outline. The hair is composed of staples, knives and scissors, the ear of calipers and awls, the beard of No. 16 steel jack chain, the forehead of a caliper and bit, the eyes and eyebrows of calipers, one-half inch washers and No. 42 chair nails, the nose of nails and a screw hook, the collar of No. 32 caliper rules, the star and epaulets of brass jack chain, the shoulder of a rule, a skate key, a safety pin, bits and other articles, and the badges of paint colors.

Dozens of changes could be made, but very few that would have been an improvement. The curves are faithfully worked out, a couple of the best touches being in the screw hook for the nose, the chain for the beard and the staples for the front part of the hair. The usua style of figures constructed after this plan are crude, although possibly quite cleverly made. In this picture, however, anyone can readily see the likeness.

Mr. Noyes says that the figure drew crowds from the City of Hamilton, which is close by, and from the surrounding country, and proved a profitable advertisement for the store. Such a display has all the advantages of a picture window, combined with the selling qualities of a display of articles carried in stock. The spectator is also induced to stop and look closely at the make-up of the head in order to see what is used in the different parts. The construction would take considerable time, but it could be built out of the window during spare moments, and there is no expense in connection with it.

* * *

A new man in business almost invariably has his way to make from the ground up. The fact even of his having been a resident counts for very little in these days of strenuous opposition. He should, at any rate, take little consolation in the fact that he has known his neighbors, and that they are bound to come to him for their wants, in spite of competition. The trade must be largely won, and with the winning comes its keeping. The average buyer has little of the staying quality, unless continually rubbed the right way, and patted on the back, so to speak. It may go against the grain to do this sort of thing, yet it has to be almost literally done or the customers rapidly drift away.

PAINT, OIL AND BRUSH TRADES

PIGMENTS FOR PAINTING METAL.

THE various mineral and metallic paints are almost all natural or artificial iron oxides. While these are cheap and useful in painting rough wooden structures, they are sometimes really quite dangerous for application to iron work, because instead of preventing oxidation they are apt to further it. Rust is hydrasted iron oxide, and seems to possess the peculiar faculty of spreading from a center, in some way acting on adjacent iron to form additional rust; moreover, the artificial metallic paints are frequently made from copperas and iron pyrites, and are apt to contain sulphuric acid, which is another source of danger to an iron surface, writes Frank Rathbone, in The Decorator.

Coal tar is much used as a paint for the roughest class of work, both wood and iron, in the latter case, especially for cast-iron pipes, smokestacks, and work to be buried underground. It has the nature both of resin and of oil. Muelder, in a series of experiments, found that it continually decreases in weight, losing from two to five per cent. in 87 days. It has also the disadvantage of becoming exceedingly brittle by the action of cold, and softening at 115 degrees F. Asphalt permits of somewhat wider range of temperature, but otherwise exhibits the same peculiarities. These substances, while they last, are probably the most valuable of paints, especially under water; but they are unfortunate in their tendency to crawl on the surface to which they are applied, finally leaving the upper portions almost or quite bare. This is the case even underground.

In house painting the most important thing to consider is the permanency and durability of the paint itself. In constructive ironwork, on the contrary, the condition of the surface under the coating of paint becomes highly important. To the superficial observer the painted surface may appear as perfect as the day it was put on, yet underneath it the iron may be slowly, yet none the less surely, rusting away. In fact, it sometimes happens that the paint itself proves a destructive agency for injuring the iron. This is, as said above, specially true of certain of the metallic paints, containing sulphur in a form readily oxidizable to sulphuric acid, or of certain of the oxides, such as Venetian red, which are practically rust themselves, and give off oxygen to the iron, absorbing more from the outer air to replace that which has been lost. It is said that a similar process takes place during the oxidation of linseed oil, which changes it to linoxin. Were all the oil to unite with the pigment base to form a soap, then none of its oxygen could be given off to rust the iron.

Red lead, from the fact that it dries up linseed oil almost entirely by saponification, forming a pure lead soap, and that there is therefore none of that oxidation of the oils which takes place in the presence of pigments wholly inert, or which only partially combine with it, has long been regarded as the best possible preservative for clean dry iron. But in order to be most effective, the iron must be perfectly clean and free from any suspicions of rust, and absolutely dry. Red lead should be perfectly pure, and of the best and most careful preparation. That from any well-known corroding house may be depended upon for purity.

As red lead saponifies very quickly with linseed oil, it must be used within a few days after being ground; and, moreover, it is rather difficult to work. Hence there is great temptation to the unscrupulous painter to add some substance; such as whiting, to it in order to make it work freer, as well as to cost less money for material.

A careful reading of the foregoing will, we hope, render it clear that red lead may advantageously be used, not only for iron work and the priming of wood work as it is at present, but also for many other purposes, especially when the surface is subjected to hard wear. For any purpose where great durability and moderate cost are required, nothing probably can exceed the virtues of red lead. Agricultural implements, carts, wagons, barrows, dust cars, in fact, vehicles in general that are subject to hard wear, can be painted and kept in good condition more economically with red lead than with any other paint. The color need not stand in the way of the pigment being employed because, as already pointed out, the addition of a little black greatly moderates the bright color.

Mander Bros. Commence.

In our issue of December 12 reference was made to the establishment in Montreal of a branch of Mander Bros., manufacturers of varnishes and colors, of Wolverhampton, England. We have just received from this firm a copy of a circular letter which they are sending to the Canadian trade. It reads as follows:

Dear Sir,—

We have pleasure in advising you that we have established our own house of business at the above address, where we shall keep a large stock of our high-class varnishes and colors. We have taken this step in view of the great demand in the Dominion for our manufactures, and in doing so are in complete accord with our late esteemed agents, The Sherwin-Williams Co. Our manager and traveller for this branch, G. O. Lees, will have the pleasure of calling upon you in due course, when he hopes to be favored wi h your valued orders. In the meantime, any communications which you may send to our address, as above, shall receive most careful attention.

MANDER BROS.

218 St. Paul street, Montreal.

Paint and Oil Markets.

MONTREAL.

Business is in a transitory state at present, but January may see some new developments. There has been a fair booking of Paris green and a large number of inquiries have come in. With the first week in January business is expected to be brisk. The extremely cold weather has hindered house painting, but we understand that carriage and furniture factories are using large quantities. Prices throughout are unchanged this week. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.ob. Montreal. Terms, four months, or 3 per cent. off for cash in 30 days.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Canadian (present delivery) Petroleum bbls., 12 1-4c.; arsenic kegs, 12 1-2c.; 50 and 100-lb. drums, 13c.; 1-lb. packages, 14c.; 1-lb. tins, 15c.; 1-2-lb. packages, 16c.

—

ST. JOHN.

Oil—In burning oil the market continues very firm. The outlook for linseeds is for low prices, with buyers backward. Turpentine is high. Lubricatings begin to have more attention. A new company have opened a warehouse on the south wharf and The Sun Oil Co. have made a change of managers. Fish oil is very scarce.

—

WINDOW GLASS.

TORONTO.

There is little doing. Prices are still being cut. We quote prices nominally as follows: Star, under 26 in., $3.10; 26 to 40 in., $3.30; 41 to 50 in., $3.70; 51 to 60 in., $4; 61 to 70 in., $5; 71 to 80 in., $4.30 net, Toronto, Hamilton and London.

—

MONTREAL.

Prices are unchanged and are now being well maintained. We quote the following prices: First break, 50 feet, $1.70; second brake, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

WE WISH

that the many favors extended by our patrons in the past shall continue during 1904, and that we shall mutually enjoy a larger and more profitable business than last year.

YOU

may rely upon our best efforts to maintain the high standard of quality which our Anchor Brand goods have always been kept up to.

A HAPPY

Combination is Anchor Brand Paint and the merchant who sells it. He knows he has the only brand in Canada which contains Brandram's B. B. Genuine White Lead—the best in the world—and he enters upon the

NEW YEAR.

confident of having a successful season, and handling a line of goods that will give satisfaction to both himself and customers.

HENDERSON & POTTS CO., Limited, Montreal.

CHURCH'S COLD WATER

ALABASTINE

is already half sold when a dealer puts it in stock because of our GENEROUS ADVERTISING in public papers. It is not a kalsomine, but a permanant coating that hardens with age, a claim that cannot be truthfully made of any other wall-coating. The patented feature—READY FOR USE BY MIXING IN COLD WATER is a great advantage to the busy workman. He appreciates it, and to sell anything else it must be recommended as "the same thing," or "just as good." No dealer can afford to make such representation. The public knows Alabastine, and little or nothing about the just-as-goods. There is no loss in selling Alabastine—it is put up in moisture proof packages, and in the most popular shades.

We shall help to sell Alabastine in the future, just as we have for more than twenty years past. Order early either through jobber, or of

THE ALABASTINE CO., Limited, PARIS, ONT.

Two Mechanics' Novelties.

Considerable interest was aroused some time ago by a reference, with illustration, of a miniature monkey wrench made by the Mechanics' Supply Co., Quebec. This firm are now also making a miniature hammer of similar size. Either of these will be supplied the trade at 30c. each or $2.75 per dozen.

The assets of the estate of J. W. Morrow, general merchant, Robinson, are advertised to be sold.

HARDWARE AND METAL is the only journal in Canada concerning itself with the paint, oil and glass interests. Its markets are trustworthy and full.

WALL PAPER

Discoloration of Ingrain and How to Avoid It.

IN conversation with a gentleman connected with the paper-hanging trade, bearing on this topic, he gave us the result of his experience, which may be worth while putting into print for the benefit of others. He set out with the statement that he would guarantee to make a good job anywhere, and he recited this experience.

A customer came with a client and selected a paper, a blue ingrain, patterned. The painter took it away, and in due course it was hung. Within a few days complaints came to the warehouse that the paper was faulty, and had dried all in patches. To appease the "customer's" "customer," a new paper was supplied free of charge—this time a red one—and sent on to the job. This was hung, and after the usual "decent" interval the complaint came along, accentuated and emphasized by vigorous adjectival English, and demands for compensation.

It was at this stage that our informant came on the scene. He had been away on his holidays, and the transactions had all taken place during his absence. As an expert the matter was referred to him, and he took it up in earnest. He found (1) that the wall on which it was hung was a painted wall, (2) that the work had been done on a wet day, (3) that the paper hanger had religiously kept closed up every avenue of air, (4) that he had not lined the painted walls prior to papering, and (5) that he had used thin, sloppy paste.

The room was thereupon done under the direct supervision of the expert. First the walls were stripped and lined, the lining being hung horizontally. Secondly, the paste was made very strong, but stiff. Thirdly, the windows and doors were kept closed while the paper was being hung. Fourthly, the paper was pasted as "dry" as could be done with safety, and not allowed to stand; and, fifthly, as soon as the walls were hung, doors and windows were opened to circulate the air as much as possible, and, with a fire in the grate, the original blue paper was hung—and turned out an unqualified success. Our informant said that with these conditions, i.e., stiff, strong paste, free from alum, dry pasting, walls lined when the under surfaces are painted (brown paper in sheets preferred), he would guarantee the work turning out well in ninety-nine cases out of one hundred. We believe he is right ! !

From The Journal of Decorative Art.

Valuable Hints on Hanging Wall Paper.

[By E. A. Edmunds, Brooklyn.

THE manner of treatment described in the following lines has served me with unqualified success for many years :

First, prepare the walls. If they are painted, size them with washing soda ; nothing else. Make the solution strong enough so that you can see it cut the paint as you spread it on. Care should be taken to prevent it from running down over the finished woodwork. When dry it will be ready to receive the paper. The treatment makes the paint porous so that the paste can take hold and obviate the disasters of "peeling off" and "opening" at the joints on becoming thoroughly dry. It destroys grease and renders the semi-saponified paint to good purpose as a backing.

The wall should always be sand-papered to remove the small lumps after plastering up the holes and cracks.

If the walls be clean, hard-finished plaster, irrespective of their age, I treat them with a strong solution of glue and vinegar (cider vinegar preferred). Dissolve the glue in water over a slow fire, then thin down with vinegar, and apply copiously. The vinegar destroys the enemy (lime) which causes the paper to shrink apart at the joints and bleach out in spots. I cannot recall an instance where this solution has failed, even on soft, chalky, "hot" walls. All new walls or parts of walls should be treated with a coat of this vinegar size.

In no case should good papers be put on over old ones, or over kalsomine.

The factor that contributes most to the appearance of a nice room is cleanliness ; without this your work will be a failure, irrespective of the cost of paper. In order to attain this you must use your paste so heavy that it is barely possible to work it out evenly on the back of the goods without injuring them. This applies to all grades and kinds of wall hangings, whether of paper or tapestry. In the latter case (tapestry fabrics) it is often advisable to paste the wall, then "roll" the goods on.

The knife and straight-edge should be used to trim with, especially on heavy goods. For "butted" work hang the strips from a sixteenth to an eighth of an inch apart, then work them gradually together, and when you have the room all hung, carefully roll down the joints, then with a clean wet sponge moisten the joint by passing the sponge over it once only. This latter act is to remove the gloss the roller makes, and applies to ingrains or other pulp papers. Do not sponge printed or surfaced goods, the colors will run. —Carpets, Wall Paper and Curtains.

WALL PAPER

Remember this is JANUARY—in a few weeks the Spring WALL PAPER trade will be in full swing—are you ready for it? Not many dealers delay buying this late—if you are one of the "late ones" take a suggestion—ORDER NOW, before the choice is further curtailed. Write us for salesman to call or for samples.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE Canada Brake and Supply Co., Toronto, have been incorporated with a capital of $60,000, to manufacture and deal in brakes and other mechanism. The directors are J. L. Spink, S. C. Smoke, both of Toronto; J. L. Peacock, Buffalo; W. H. Belson, C. R. Tryon, both of Greenfell, Assa.

The Great Northern Railway has awarded the contract for the construction of 70 miles of new railroad from Gatineau Junction to Quebec. The road is being built to avoid the steep grade through the Laurentian mountains. It will cost $1,200,000, and there is a provincial subsidy of $3,200 per mile, making a total of $224,000.

The National Table Factory, Owen Sound, Ont., was almost completely destroyed by fire recently. The loss is estimated to be in the vicinity of $60,000. The origin of the fire is unknown. A member of the company says that the factory will be rebuilt as soon as the necessary building material could be obtained and the weather permitted.

It is claimed by the municipal authorities of St. Johns, Que., that The Singer Mfg. Co. have accepted the inducement made by that municipality for the removal of their Canadian plant from Montreal to St. Johns. D. J. Fraser, manager of the Montreal plant, says that it is the purpose of the company to build a plant in St. Johns with a capacity three times that of the one now at Montreal. At present the company have their cabinet work manufactured in Woodstock, Ont., but the proposed plant in St. Jonns will manufacture all requirements of the sewing machine.

A steel girder bridge over the Zambesi Falls, Africa, will be the highest in the world, 420 feet above water level. It will be 650 feet long. The erection of the bridge will take place simultaneously from both sides of the river, the weight being carried by steel cables until the two halves of the central span abut and are connected. The structure, the total weight of which will be 1,600 tons of steel, is nearly finished in England now, and will be shipped about December. During its erection a cableway will be arranged for the purpose of passing across material required for the bridge, and also for conveying railway material needed for the line north of the river.

NOTES.

There has not been a better season for logging for many years on the North Shore, E.B., and everything is encouraging.

A general reduction in wages, averaging about 10 per cent., is to be made at all non-union iron and steel plants in the United States.

J. F. Brown, architect, Toronto, is getting out plans for a Baptist church at Snellgrove. It is to be built of brick and will cost about $3,000.

The Massey-Harris Co. have decided to make a reduction of about 10 per cent. on piece work and a cut from $1.45 to $1.35 per day in laborer's wages.

A recent fire caused considerable damage to the stock in an annexed building of the Adams Bros.' harness factory on King street east, Toronto.

The Chateauguay and Northern Railway are going to erect large freight sheds at corner of Morean and St. Catherine streets, Montreal, to cost $5,000.

The Richelieu and Ontario Navigation Co. have decided to construct a marine railway at their works at Sorel. It will be the first of its kind constructed in Canada.

A recent fire damaged the planing mill and sash and door factory of D. Aitchison & Co., Hamilton, Ont., to the extent of $20,000. The loss is covered almost entirely by insurance.

During the past two weeks nearly five hundred men have been taken on the construction work at The Dominion Iron and Steel Co. There are employed now on the works in the vicinity of 1,600 men.

A despatch from Nelson, B.C., says that an important strike of silver-lead has been made at the Sullivan Mine in East Kootenay. This will place the Sullivan Mine in the front rank of silver-lead mines.

Douglas & Ratcliff, Toronto, have been incorporated with a capital of $40,000, to carry on in all its branches the business of paper dealer and to acquire the business of Douglas & Ratcliff, Toronto. The directors are S. J. Douglas, E. L. Ratcliff and Geo. Powley, all of Toronto.

FLINTCOTE ROOFING.

"Flintcote" roofing has only been on the Canadian market a short time, yet through its merits and its adaptability to understand the rigorous climate of Canada, has had a very large sale. The company is represented in Canada by Mr. J. B. Gass, of Montreal; in Toronto, by Mr. T. R. Flint, and in Winnipeg and the West by MacKenzie Bros. The great advantage claimed for this roofing over other roofings is a wonderful elasticity which permits of contraction and expansion without opening the seams in the slightest, a feature which is very necessary for such a changeable climate as ours.

INQUIRIES FOR CANADIAN TRADE.

THE following were among the recent inquiries relating to Canadian trade received at the Canadian Government office in London:

1. A Liverpool firm of commission and general merchants, offering good references, are seeking the representation of a good Canadian exporter.

2. Inquiry is made respecting the nature of the encouragement offered by any municipal authority n Canada in the event of a company or group of capitalists starting a new industry by erecting a factory for the manufacture of a staple article not at present being produced in the Dominion.

5. Application has been made for the addresses of iron works (blast furnaces) or steel works in Canada, by a firm desiring to bring before them propositions concerning the utilization of slags.

6. A Vienna commission merchant, with English experience and good references, is anxious to hea from Canadian exporters starting a Continental connection.

7. The names of parties in different parts of Canada, wi ling to act as buying agents for a large manufacturer of sauces and other similar grocers' sundries have been applied for.

8. A West of England firm have asked to be furnished with the name of a large Canadian canning house requiring representation in Great Britain.

The following enquiries were received at the Canadian Section of the Imperial Institute, London, Eng.:

9. An engineering company seeks the co-operation of some first-class Canadian manufacturers prepared to take up the manufacturing agency of their brick and tile machinery.

10. A timber manufacturing firm, in a position to place considerable orders, wishes to hear from Canadian shippers of box shooks.

11. Enquiry has been made for the addresses of Canadian manufacturers of carpets.

12. A Bristol manufacturer of fire bricks for furnaces, who can ship advantageously from Avonmouth, would like to hear from Canadian buyers of these goods.

[The names of those making inquiries may be obtained from the Editor of HARDWARE AND METAL.]

HEATING AND PLUMBING

PLUMBING PRACTICE—PAST AND PRESENT.*

By Geo. Clapperton.

BEFORE entering upon the subject of my paper, I think it but proper to offer a little explanation. I must confess that in choosing a subject to write on, I found it quite difficult to decide on one, which would be interesting, and at the same time somewhat instructive. For to me it apeared as if to read a paper on plumbing before plumbers, was somewhat like shipping coal to Newcastle, but be that as it may, I became bolder as I thought over the various subjects, and eventually chose "Past and Present Plumbing." While I may not be able to place before you all the facts which I would like, or you might expect, still if I can place enough to make you think a little harder and deeper into the subject of my paper, it has not been without its reward.

Having chosen our subject, next let us see what the meaning of the word Plumber is, this we find is "one who works in lead, or a lead worker." Now, while we are not told by historians that all the men of ancient days who worked in lead were plumbers, still most of you here will agree with me when I say that he could not have been called by a better name. So, we will consider all lead workers of ancient days as plumbers.

Chinese the First Plumbers.

This takes us back quite a long way, for we find that the Chinese, long before the Christian era used lead and soldered lead and other materials together. To think that the Chinese were the pioneers of our trade may not be pleasant to many of us, but it nevertheless is true. But, the Chinese were not the only ones which used lead about this time, for we find Archimedes, a Greek philosopher, who lived 200 years before the Christian era, used lead pipe.

We find it stated in the Bible, that lead is a lasting metal for letters, and that David used leaden pipes, also that in the ancient cities of Asia, Egypt, Greece and Syria, lead pipes were used. These, Mr. Chairman, will be quite sufficient to prove that there were lead workers (whom we now call plumbers) in the early days, and taking Archimedes for the first plumber we have our age, 200 years B.C., or bringing it up to the present time, makes it 2,103 years old, quite a respectable age, while this may seem a long time, it would fade into insignificence, when we compare it with the Chinese, who used lead nearly 5,000 years ago. History tells us that there was such a man as a lead worker, but does not tell us that he had a helper, who was to be an apprentice to the trade, so that we will consider his helper as a laborer or handy man, and the explanation, no doubt, will account for a lot of the lost art, if I may call it such, for none of us would care to dispute the fact, that the ancients knew secrets about which we know nothing. To thoroughly understand this one has only to turn up some of the old masters and see what wonderful wisdom and skill the ancient plumber displayed in the use of metals and hydaulics.

Having obtained our age, now let us look and see if we can trace some of the metals and articles which we now use. While many have changed their shape, as well as their material, others have retained their shape and changed their material.

Sheet Lead.

As we have no records of pipe being drawn by the ancients, it will be fair to assume that they first cast their lead into sheets, and then formed them into pipe, burning or soldering the seams, so that this must have been the style of pipe used by Archimedes, besides we read of lead being used as leaves for books. The Westminster Abbey and St. Paul's Cathedral have cast sheets of lead for roofs, the former was built in the 13th century, likewise the King's College, Cambridge, built in the 15th century, has cast sheets for a flooring between ceiling and roof. The first records we have of sheet lead being rolled was in the year 1670, when a patent was issued to Howard & Watson, and known as an engine and rollers for drawing lead into sheets. This machine did its work with cold rollers. Afterwards in 1804, Dodds patented a machine which worked with hot rollers. Burr followed him using rollers heated by hot water. Since this time lead has been rolled in a very similar way, and I am told is rolled in much the same way to the present day, only substituting steam for hot water. Rolled sheet lead was first used for sheeting of ships.

Lead Soil Pipes.

This kind of soil pipe has been used in the Eastern cities, especially in Rome, almost from the earliest recorded time. They were used in France long before they became known in England. Sir John Harrington was the great advocate of lead soil pipes in England and he lived during the reign of Queen Elizabeth which was from 1558 to 1603, A.D. So his advocacy must have been prior to 1603, or 300 years ago, but lead soil pipes must have been used long before this, as we find one Robert Brocke obtained an English patent for casting lead soil pipe in the year 1539, these were made in short lengths of 18 inches and three feet long, slightly tapered, and then joined together by burning. By this means they had a pipe resembling our present pipe, but not as good. After this they cast the lead pipe very thick, and then drew it through a die, this enabled them to make it any required thickness. This way came into use about 1800. I have no doubt but Brocke copied this idea from Braham's patent, for he invented a machine for pressing a pipe through a die, thereby getting a pipe which very much resembled the drawn pipe of to-day. His machine was worked by hand and he worked or used the lead while it was in its molten state. In 1820, or about 20 years after Bramah's patent, we find a man by the name of Burr patented an improvement on Bramah's machine by applying the hydraulic press to it, thus enabling him to do his work easier. He worked his lead, while it was hot but in a solid state.

Then came Hague, who patented a press, using, instead of the hydraulic press, one driven by a powerful screw

Preston and Winnipeg

and compound cogwheel. Since these there appear to have been no improvements of note for making drawn pipe. For the machine of to-day appears to be worked similar to Burr's machine.

While these machines appear to have been doing good work, it took a number of years to displace the old soil pipe made from sheet lead and seamed lengthwise, but the start having been made nothing appears to have impeded the steady progress and we passed from hand-made pipe to machine pressed pipe, then to cast iron, copper and now, wrought iron soil pipes, which brings us up to the present day with soil pipe.

Solder.

Next let us see about the metal used to mix solder, namely tin. This metal is contained in nearly everything the plumber has to do with, however, we will deal with it only as it forms solder. Here we can go a long way further back than we did with sheet lead, for we find that the Chinese have records of its use as far back at 2,200 B.C., this is nearly 5,000 years ago, besides we know the Egyptians used it and were undoubtedly A1 plumbers, for they were not satisfied with simply laying lead, and lead pipes, for imbucated vases were their delight, you will find them represented in the times of Thotimes the Third. In Malacca, tin was found in very remote ages, also soldering lead pipes is mentioned by Vitrurious. The ancient plumber, not only knew how to do his work (but unlike the plumber of to-day) took advantage in soldering with the capillary action of the solder, for we read that their soldering was so neat that it could not be seen. They wer in the habit of tapping the lead and letting the solder sweat underneath, more especially in cistern work where the water was liable to eat away the tin as they called it, in some isolated cases. This way is still used for chemical work.

Solder is one of the materials which has changed but little during the last 5,000 years and before passing away from it, it is but fair to say, that the ancient plumber, not only mixed tin and lead together to form his solder, but it often contained lead, tin, bismuth, mercury and cadmium, by adding or combining the first four of these together in proper proportions the combined metals will melt with 122 degrees of heat or only 22 degrees more than your blood heat, or 90 degrees less than would boil water. When you consider the finest solder we use, that is half-and-half requires 370 degrees of heat to melt, you will not wonder how the ancients did such fine work. Now, we have our sheet lead, soil pipe and solder.

The Earliest Trap.

Let us look back to the all important article, namely the trap. We find that the earliest trap which has been located was taken out of the Lathbury Old Church built by the famous architect, Sir Christopher Wren. This trap bears the date of 1678 A.D., 225 years ago, it was for a water closet and made of a "4-square" shape, of the style commonly called "D" traps. While this would not be copied by our modern plumber, still this one was well made and by some means unknown to the writer, the bottom was increased over one half in thickness, which is more than could be said of all the hand-made traps of more recent dates. Some of you no doubt will be skeptical about this date, but when you remember that sheet lead was rolled in 1670 or eight years before this trap was made it will no doubt remove that doubt. But the ancients did not call everything placed under a fixture by the word trap, they called our present "S" trap a syphon, and used it for syphon purposes only. As far as I can find out a trap was used first to keep back gases in chemical work so they have not changed their use in all these years, as far as keeping back gases is concerned.

They have changed their shape, but little, but that little has made a wonderful difference in the cleanness of this particular article, for we now have in our drawn trap one which is smooth inside and has no square corners to accumulate filth. This cannot be claimed of our many cast traps, be they brass or other metal, for as you are all aware they often contain a very highly polished exterior and a very rough and uneven surface on the interior.

While I am able to date back 225 years with the trap, I must admit that the records do not say that they had any particular kind of a closet bowl, but if they had used a trap for water closet purposes they must have had a bowl of some sort attached, however, we find that there was an English patent taken out by one Cumming, in the year 1775. This closet was worked with a slide valve. Two years later Prosser patented a closet (much resembling our old Demerest) with float balls to regulate the water, for he says in his description that when the basin empties, these balls act and cause the water to flow into the bowl). Then in 1878 Bramah patented a closet having two valves, one to regulate and control the water to the basin, the other to take it away. This closet had a ground in brass outlet 4 inches in size, a wooden frame and lead lined trunk.

Then came Underhay, who made the bottom valve to close on a rubber seat. His idea was to reduce the cost (a typical plumber) and guard against leakage by grit or dirt getting under valve. This invention must have been made about 1840 as that was the year India rubber was first vulcanized and made suitable for this work. He also invented a very simple air bellows, as well as an oil regulator, both for the purpose of controlling the action of the supply valve. After these closets were more or less at a stand still. In fact, they appear to have retrograded, all kinds of valves, tanks and bowls were used. Inventors, however, were in the meantime busy trying to get a closet which would fill the place, that is to remove the valve from the tank overhead. The first person to accomplish this was a Scotchman, by the name of Wm. Ross, of Glasgow. (This may not be accurate, as we only have his word for it). This brought the separate tank for each w.c. and the all-porcelain bowl and trap, of all shapes and sizes. This line of invention appears to have a lasting effect up to the present day, until we have the closet bowl of to-day with an outlet of 21-2 inches, a size which I think is altogether too small and I think that all here will admit that while the ancients erred by having everything too large, we have gone to the other extreme.

But let us hurry along. The wash basin has been somewhat improved and made more easily kept clean, also its shape has changed to a more serviceable one. Our urinals have made some rapid strides in the last few years, and not before it was needed, for this fixture is one of the most useful and at the same time the hardest to properly arrange so that it will be self-cleansing.

The Modern Kitchen Sink.

Next to the urinal, I think the kitchen sink comes; we have come from the old lead lined sink to the cast iron painted, then to the enamelled iron, and now the all-porcelain, but the greatest step was taken when the boxed in arrangement around the old sink was disposed of, with it went the store hole for everything around the kitchen. Contrast this old sink arrangement with our present cast iron enamelled sink and drainer, supported on brackets of the same ma-

PLUMBING GOODS
Gas and Electric FIXTURES.

You will tender during the forthcoming months on a good amount of Plumbing Work.

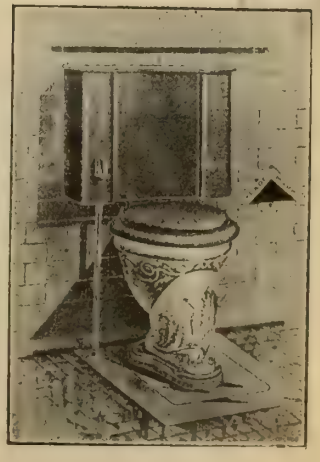
Plumbing Jobs are too important to be trifled with. Cheapness is false economy.

Workmanship is very important. This part of the contract is yours to figure on.

Supplies are equally important. This is where we come in,—with your assistance.

We are the one supply house for a majority of the plumbers from one ocean to the other in Canada. We keep busy, however, by asking for business. We ask for yours if we do not have it already.

Let us work with and through you on your 1904 tenders.



Manufacturers and Designers of Gas and Electric Fixtures.

Contractors for Electrical Wiring in all its branches.

The James Morrison Brass Mnfg. Co., Limited, Toronto.

terial and see what a difference there is, why, Mr. Chairman, one almost shudders to think of it.

Stationary wash tubs appear to be of modern invention, but like all other inventions have been considerably improved, for you are all well aware that the old wooden tubs are doomed and are gradually but surely passing away and being replaced by those made of non-absorbing material.

Pumps Ancient and Modern.

There is still another fixture which we do not often see in the present day, namely pumps, or machinery for raising water. When the first one was invented I cannot tell, but we know that the Archimedes screw was used 200 years B.C. for raising water, when it was required to raise water to a great height. A series, one obliquely above the other, was employed. After this the old chain pump came into use, such engines (if they may be called such) may be found to-day along the banks of the Nile and in Hindostan. This is one means of raising water where the atmosphere need not be taken into account. Then came the historic water ram. This was invented by a Frenchman, Montgolfer, somewhere late in 1700. This machine, while simple of construction, is perhaps one of the most difficult to adjust. This machine has been known to do some very peculiar work. There is one now in use in Hartford, Conn., where the water is brought from a little river half a mile distant and then raised to a height of 140 feet. There is another in England which raises water 134 feet, the water supply being only 4 1-2 feet above the water ram. This ram raises 262 gallons per hour. Then came the centrifugal pump. This was first exhibited and astonished the visitors at the London Exhibition in the year 1851 by Mr. Appold. The inventor claims to have raised water 67 feet 8 inches by a speed of 1,322 revolutions per minute, probably not a case exists where the adaptions of science to the arts has met with such complete success as this; the whole machine is based on the strictest principals of mechanical science and yet its construction is so simple, that few can view it without an exclamation of surprise, that its invention has been left to our times and not known long ago. Then came the force pump about 1853, this is still in use, only somewhat remodelled and improved.

Now, I think I have about exhausted your patience, so will close with a short summary.

We find the plumber of old doing his work in a very round about way, but in a thorough manner, his material was somewhat clumsy and in some cases awkward, but he nevertheless displayed considerable ingenuity to overcome difficulties. He had to take his raw material and manufacture his work, then put it in place. We, on the contrary, have our manufacturer and supply men, who get our work ready, we simply put it in place. We also have his successes and his failures in book form for our guide. Is the plumber of to-day as good a mechanic as his predecessor? This question I will leave with you.

Shelby Steel Tubing.

JOHN MILLEN & SONS, Montreal, inform "Hardware and Metal" that they have been given the Canadian distributing agency for Shelby seamless cold-drawn steel tubes. They are carrying in their Montreal and Toronto warehouses a large stock of about 150 sizes, which should be sufficient to meet the ordinary demands of the trade. Any special orders for sizes not in stock can be filled with little delay by importing from the United States.

The Shelby tubes are made from the very best open-hearth steel, the material being soft and easily worked. It welds as easily as the best iron, but is much more ductile, and has a higher tensile strength. As the metal is cold drawn it is rendered dense, tough and ductile. The cold-drawn process gives it an increased tensile strength and produces a tube true in size and gauge. Working the tubes cold also eliminates the danger of surface defects, which often occur through the presence of rolling mill scales or other dirt in the fibre of the metal.

The physical properties of the tubes are about as follows :

Tensile strength	50,000 lbs.
Electrical limit	35,000 lbs.
Elongation	33 per cent.

The introduction of this product into many fields of manufacture has been followed by the most gratifying results. Seamless steel tubing is now extensively used for various mechanical and engineering purposes. It makes possible a great economy of labor, for it can be used for many purposes for which it has formerly been the custom in most shops to undertake the tedious task of boring through the solid steel. The tubing can be put to many different uses. For example it can be used for hollow axles, roller bearings, laundry machine rollers, diamond drill rods, typewriters, hollow shafting, pneumatic tubes, etc. It can be used in all classes of artistic iron work.

The material from which these tubes are made is the best that can be obtained ; it machines readily and cuts free and clean. Soft annealed tubes suitable for bending or forming into special shapes can be furnished. Both cold-drawn and hot-drawn tubes are furnished for mechanical applications. Owing to its smooth finish and slight variation in diameter and gauge, a cold-drawn steel tube can often be used to advantage and with economy in place of an article ordinarily machined from solid stock. For such purposes as tubing is regularly used, seamless tubing possesses the maximum of strength with the minimum of weight.

Seamless tubing is now extensively used for bicycle and automobile construction. Manufacturers demand tubing of the greatest strength and rigidity, so that the construction will stand the severest shocks and vibratory strains. On this account the tubing in question is highly esteemed.

John Millen & Sons, 1,525 St. Catherine street, Montreal, will be pleased to send to "Hardware and Metal" readers fuller information regarding this tubing than we have been able to give in a short sketch, as well as price lists and all necessary particulars.

To Ascertain Weight of Steel Tubing.

THE question is often asked, what is the best method of ascertaining the weight per foot of any size and gauge of steel tubing. A Montreal firm have sent to "Hardware and Metal" the following method :

Ascertain the decimals of both outside diameter and gauge. Subtract the decimal of the gauge from the decimal of the outside diameter. Next multiply the result by the decimal of the gauge and multiply this result by 10.67.

EXAMPLE.

To ascertain the weight per foot of a tube whose outside diameter is 2 inches and whose gauge is 10. The decimal of 10 gauge is .134.

First subtract the decimal of the gauge from the outside diameter :

$$2 - .134 = 1.866.$$

Multiply this result by the decimal of the gauge :

$$1.866 \times .134 = .250044.$$

Multiply the result obtained by 10.67 :

$$.250044 \times 10.67 = 2.66896948.$$

The weight per foot of tubing 2 inches outside diameter and 10 gauge is 2.668 pounds.

The Best Door Closer is . . .

TORONTO PLUMBERS IN SOCIAL CONVENTION.

AMPLE proof of the success of the monthly social evenings instituted last month by the Toronto Master Plumbers' Association was furnished at the meeting on Monday evening in the association rooms, Richmond street west.

When President Robert Ross arose to "give the glad hand" there were over one hundred members of the association present, as well as many guests. Among the latter were noticed:

P. McMichael and W. Cluff, of The Dominion Radiator Co.

T. Alcock, E. Brewer, and W. L. Helliwell, of The Gurney Foundry Co.

W. A. Porter and F. W. Armstrong, of The James Morrison Co.

A. D. McMichael and M. Sheppard, of The James Robertson Co.

W. P. Malcolm and W. S. Jackson, of The Ideal Mfg. Co.

Secretary Meredith read regrets from F. N. Cullen, of Cullen & Johnston, E. R. Rogers, of the James Robertson Co., and Fred Somerville, of the Ontario Lead and Wire Co.

Mr. Ross extended a hearty welcome to those who had responded to the invitation to be present at the evening's entertainment. The attendance was, he thought, a satisfatcory proof of the good fellowship existing between the manufacturers and supply men and the master plumbers.

The feature of the evening was a paper on "Past and Present Plumbing," read by Mr. George Clapperton, of the Bennett & Wright Co. This most interesting and comprehensive report is published (at the request of many who heard it) verbatim in "Hardware and Metal."

A live discussion of the paper ensued. The representatives of the manufacturing and jobbing houses extended greetings to their friends, the master plumbers, in their usual jolly and affectionate manner. The universal keynote was that of harmony, good-will and mutual interest. One supply man caught the spirit of the occasion. "Indeed," he remarked, "our interests are one; we cannot do without you nor can you do without us; if we are to be successful we must work together; and we wish the master plumbers of Toronto to make dollars during 1904 in place of the cents they made in 1903, and that the trade may continue to flourish and develop like a green bay tree."

The splendid undercurrent of comaraderie was manifest during the evening, whether in the lighter vein of entertainment or when one member eulogized another or indulged perchance in a bit of pleasantry at his expense.

After a fine vaudeville and musical programme had been provided, to which several of the members contributed in addition to first-class professional talent, the evening's meeting, characterized by a distinct flavor of "old Scotch" and cigars, adjourned with the singing of "Auld Lang Syne" and the National Anthem.

New Foundry for Maisonneuve.

FOR some time past there have been numerous references in the Montreal daily papers to the new foundry which Warden King & Son, of that city, are proposing to erect in Maisonneuve. When seen by "Hardware and Metal," Mr. King has courteously but persistently declined to speak for publication until the matter is finally settled, claiming that the newspaper reports are premature and for the most part incorrect.

It is no secret, however, that Warden, King & Son have been negotiating with the town of Maisonneuve in the outskirts of Montreal relative to the establishment in that town of a large foundry to employ several hundred men. The town made some offers with regard to exemption from taxation of the new buildings and plant, but sought to impose some restrictions which were not agreeable to the company. At least 50 per cent. of the employes were to reside in Maisonneuve and the buildings were to be put up within a stated time.

These conditions were not agreeable to Warden, King & Son, and there has been some delay in reaching a basis of settlement which would be acceptable to both parties. It is now pretty well understood that an agreement has been made which is awaiting signature to make it binding. Mr. King states that he considers nothing settled until the contract is signed, but it is understood that the agreement which now awaits signature is somewhat as follows:

All restrictions as to time in which the buildings for the foundry, workshops, etc., are to be built are swept away entirely. The proposed clause with regard to the place of residence of the employes has also been eliminated. The firm are quite at liberty to choose their own employes without reference to their place of residence, but in all probability most of their workmen will find it convenient to live in Maisonneuve. It seems likely that the town will get what it wants, but a hard and fast regulation would have been irksome in the extreme.

It is the intention of Warden King & Son to erect buifdings costing $300,000 within three years with the plant and machinery necessary for their proper equipment. It is understood that they have given the Town Council every assurance that this intention will be carried out, but they have been unwilling to enter into any hard and fast contract to that effect. Refusing to be bound by contracts, they have accepted a commutation of municipal taxes instead of an exemption. For 20 years they undertake to pay a tax of $200 per annum but no more.

Both Warden King & Son and the town of Maisonneuve will receive important advantage from this agreement No matter how large or costly the buildings and plant which the firm may erect during the next 20 years their taxes are not to exceed $200 per annum. On the other hand the town can not fail to benefit from the presence of large iron works employing several hundred men. Moreover a tax of $200 per year will be derived from a property which at present pays less than $2 per year in taxes to the corporation. The arrangement should be for the benefit of all concerned.

At time of writing the agreement has not yet been signed, but active preparations are already being made to commence building operations in the early Spring. The total area of the land secured for the works is 400,000 square feet. The property has a depth of 1,013 feet, and the frontage is on the line of the Chateauguay and Northern Railway.

Chadwick & Beckett, architects, are getting out plans for a modern brick and stone residence for Mrs. V. Chadwick, Poplar Plains road, Toronto; also for a brick residence for T. G. Blackstock, 20 Homewood avenue, Toronto.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1.000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

MONTREAL MILL, ESTABLISHED 1825.

BINDER TWINE.

We manufacture the following brands:

Blue Ribbon	-	650 ft. per pound.
Red Cap	- -	600 ft. " "
Tiger	- - -	550 ft. " "
Golden Crown		500 ft. " "
Standard	- -	500 ft. " "
Sisal	- - -	500 ft. " "

The above Brands have stood the test for years, and are the Farmers' Favorites.

Out of 14 lots of Binder Twine, seized and confiscated by the Government Binder Twine Inspector this year, only one was Canadian.

Dealers, who handle our Twine, will secure a satisfactory article, and, at the same time, help to build up one of our oldest industrles.

See our Samples before placing your order elsewhere.

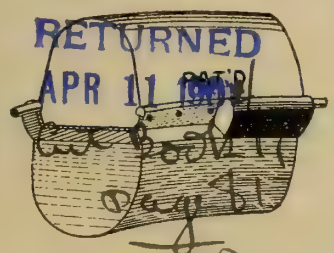
That Side Wire Tired Feeling.

All through the trade is getting that feeling of confidence in the Dunlop Side Wire Tire. The points of it are so simple that its merits are plain at a glance. The retaining wires do not pass through the centre of the rubber tire but to either side of it, on the outside, close to the rim of the wheel, and these retaining wires do not press against the rubber, but against across bars vulcanized into it at regular intervals. The wearing, eating-into force of the wire is therefore counteracted. The tire may be fastened to the wheel with as tight a pressure as the rim will carry without the wire cutting into the rubber, and the grip is so tight that sand and gravel cannot work between the tire and the rim of the wheel.



WE ARE THE SOLE MANUFACTURERS IN CANADA.

THE DUNLOP TIRE CO., Limited.
TORONTO, CANADA.

Agencies: Montreal, St. John, Winnipeg, Vancouver.

The Sales You Lose...

represent just so much money lost. In the matter of robes, for example, you can do a clean cut, profitable business if you sell the right sort of robes.

"Arctic" Buffalo Robes

are sensible, durable, attractive, profitable. They are easily sold, for they sell themselves, with a very little talk on your part. Order a sample.

Made of rich, dark brown fur, lined with red or dark green Astrachan cloth, interlined with rubber; nicely trimmed; rain, wind and moth proof; 52 x 54; 62 x 54; 72 x 54.

HARDWARE NOVELTY.

THE *Ingersoll*

American Watches.

RETAIL PRICES, **$1.25 to $2.50**

ARGUMENT.

We now offer a practical time piece for the Hardware Trade of Canada, and base our statement upon the following:

First—It is absolutely guaranteed to keep accurate time.

Second—It stands rough usage and does not get out of order easily, **making it the only watch for dealers outside of the jewelery trade to handle,** and also making it a practical one for sportsmen, boys and all men who give a watch hard usage.

Third—Its low price and high quality insure a tremendous sale, which we further augment by furnishing many handsome advertising devices for your store.

Fourth—Last but not least, these watches offer a handsome profit. Price cutters are not supplied.

Sold by several leading Hardware Jobbers of Canada. We will tell you who they are upon request.

Trial Offer—To any Hardware Dealer who will write to us upon his **business letter head** and inclose 75c. we will send a sample watch (duty not paid) and our catalogue, so that he can test its accuracy and durability.

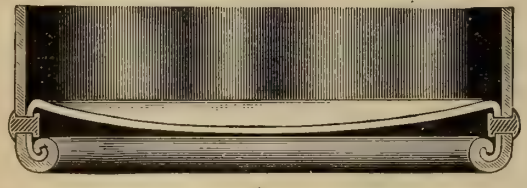
KEMP'S BROAD HOOP ROLL RIM BOTTOM MILK CAN TRIMMINGS



A criticising public have used them for the past five years and the increasing demand is proof of their superiority, also evidence of the satisfaction which they give.

The Roll Rim Bottom having no sharp turns does not break the grain of the metal or lessen its wearing qualities.

Narrow Top Hoops can be supplied in place of Broad Top Hoops if desired.

For Strength, Durability and Finish our Trimmings are unexcelled.

They cost no more than inferior qualities.

We also carry in stock a full line of **First Quality Tinned Iron,** cut suitable for the different size of Trimmings, which we will supply at the lowest current market quotations.

KEMP MANUFACTURING CO., TORONTO, CANADA.

TRAVELLERS' ANNUAL DINNER.

Twenty-Ninth Function of The Dominion Association.

THE twenty-ninth annual banquet of the Dominion Commercial Travellers' Association was held at St. Lawrence Hall, Montreal, on Wednesday evening, December 30th. To state that the attendance was large, that the toasts were loyal and enthusiastically responded to, that the speeches were of a characteristically high order, and that everybody enjoyed themselves as only commercial travellers can, goes without saying.

The large dining hall was profusely and handsomely decorated with flags, bunting, streamers and the tables ornamented with ferns and flowers. Shields bearing the arms of the different provinces of the Dominion hung on the walls. On a raised platform at one end of the diningroom an orchestra was stationed and to the strains of sweet music the excelent menu provided by Boniface Brown was done ample justice to.

Mr. J. S. N. Dougall, president of the association, was in the chair with Hon. Sidney Fisher, Minister of Agriculture, on his immediate right and Hon. Raymond Prefontaine, Minister of Marine and Fisheries, on his left. Among the other distinguished guests occupying seats at the president's table were Mr. R. L. Borden, M.P., leader of the Opposition in the Dominion House, Hon. J. I. Tarte, Mr. F. D. Monk, K.C., M.P., Mr. Robert Bickendike, M.P., Ald. Nelson, Mr. Arthur J. Hodgson, president of the Board of Trade, and Mr. D. M. Stewart, general manager of the Sovereign Bank of Canada.

After the good things provided for the inner man had received appreciative attention at the hands of the guests, President Dougall arose amidst loud applause. Before proceeding with the toast list he asked the indulgence of the guests to give a few statistics regarding the association. Organized in 1875 its membership had increased from 251 at the end of the year of organization to its present magnificent roll of 4,434. Since 1881, when the mortuary benefit scheme was established, $366,000 had been paid to deceased members' families. A surplus at the end of the first year of $534 had grown to a surplus at the end of the present year of $19,942, making the present capital $226,172. The commercial travellers had every reason to be proud of the position of their association. He then proposed the toast of "Our King." This having been duly honored, the toast of "The President of the United States" was also drunk. This was done no doubt in deference to the presence at the banquet of the president of the Commercial Travellers' Union of the United States, as well as in honor of a large number of American-born members of the association. Mr. George Wilkins then read letters of regret at inability to attend from Lord Minto, Governor-General; Sir Wilfrid Laurier, Hon. Chas. Fitzpatrick, Sir Wm. Mulock, Hon. R. W. Scott, Hon. Clifford Sifton, Hon. W. S. Fielding, Hon. A. Turgeon, Lord Dundonald and Hon. A. W. Edwards, Consul-General of the United States.

The toast of "The Dominion Government" was proposed by Mr. D. M. Lefebvre, vice-president of the association, and responded to by Hon. Sidney Fisher, and Hon. Raymond Prefontaine, the former in English and the latter in French. Both speakers acknowledged the services rendered to Canada by such a body of live business men as the Commercial Travellers' Associations, and the widespread influence of travelling men on the trade of the country. It was the duty of all travellers to use their influence to further the best interests of the country and, as Mr. Fisher expressed it, "the electors frequently looked to the commercial traveller for information, hints and inspiration." A few remarks were made by the Honorable Minister of Agriculture on the material progress that had been made in the country's trade.

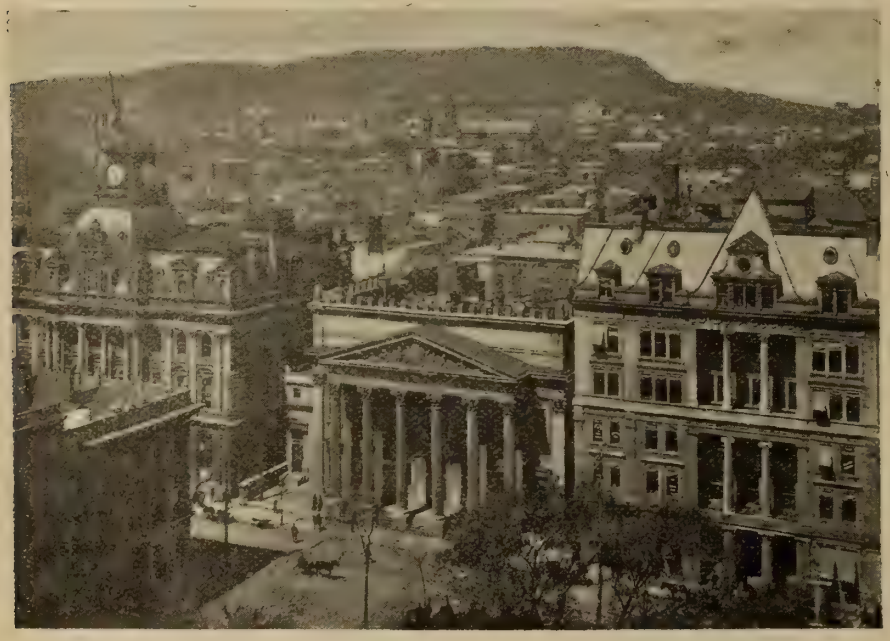
Hon. Mr. Prefontaine described commercial travellers as the advance guard of civilization, and declared that the Government was proud of them. Mr. Prefontaine referred to the opening up of new railway and shipping routes, and said it would not be long before the ubiquitous drummer would be finding new avenues to explore and develop.

Mr. Fred L. Cains, treasurer of the association, in a few words proposed the toast of "The Dominion Parliament" coupling with it the names of Mr. R. L. Borden, Hon. J. I. Tarte and Mr. F. D. Monk. The applause which greeted these speakers, particularly the respected leader of the Conservative party, must have been most flattering to these gentlemen. Mr. Borden claimed the privilege of being considered a commercial traveller as he had during the present year been on the road offering a good article to the public, he claimed he had a "good policy," and was endeavoring to lay its merits before the people. Speaking of the Dominion Parliament he considered that institution as one of great credit to the country. References had been made by previous speakers to the Dominion but he did not think that any of them had greater confidence in the future of Canada than he had. Every commercial traveller should realize to the fullest extent the greatness of this country and he thought the proper way for them to grasp its great magnificence was for them to take the trip from ocean to ocean. He asked them all to remember their duties to their country. They were the pioneers, living factors in the progress and development of the land; their fingers were ever on the pulse of trade and must be acknowledged the best judges of material changes.

Hon. J. I. Tarte, who spoke in English, in replying, referred to the great number of Canadians that had left their native land for the United States. He would encourage every one to remain here and assist in developing our national resources, and urged them all to assist in building up Canada. He also in a modest way referred to the part he had taken in developing the waterways of Canada and his efforts to make the Canadian route the best. Canada now had the shortest route between the great West and Europe, and the improvement of the Canadian route had been taken advantage of not only by Canadians, but also Western United States shippers. Mr. Tarte, on repeated cries of "en Francais, en Francais" from the guests, repeated the gist of his

remarks in the language of his compatriots. That this was appreciated was evidenced by the applause that greeted him on rising.

Mr. F. D. Monk also replied to this toast, speaking first in French and concluding in English. He fully endorsed the sentiments expressed by Hon. Mr. Fisher and Hon. Mr. Prefontaine, as to our living in a great country, that the progress of our young nation was great and that we were on the road to success. Are we going to sit by in the midst of this great era and see our friends to the south of us surpass us? This question was answered with vociferous "Never, never." He called on commercial men to use their abilities and great opportunities to advance still further the country's trade.



Montreal from Notre Dame.

The toast of "The Provincial Legislature" was proposed by Mr. W. J. Eagan, a director of the association, and replied to by Hon. J. D. Rolland, an ex-president of the Dominion Commercial Travellers' Association. Mr. Rolland pointed out what the Legislature had done towards doing away with the tax at one time levied by municipalities upon commercial travellers, and this was a proof of the Legislature's interest in, and appreciation of the services of travelling men. The question of improved hotel accommodation was a matter somewhat difficult to regulate, but no efforts would be spared to make the traveller more comfortable. This sentiment was loudly applauded by every traveller. Hon. Mr. Rolland also referred to the progress made by the Dominion Commercial Travellers' Association during the 29 years of its existence, and said that it stood to-day on an equal basis with any life insurance company in the Dominion.

Ald. Nelson, in the absence of his Worship Mayor Cochrane (who was confined to his home through illness) replied to the toast of "The City of Montreal." Mr. Arthur J. Hodgson, responded to the toast of "The Board of Trade."

A vote of thanks proposed to the president, Mr. Dougall, for the very excellent manner in which he had presided, was drunk with enthusiasm, and after he had responded, the National Anthem was sung.

The highest praise is due the president and directors and officers of the association for the magnificent manner in which the banquet was arranged and conducted, everything went off smoothly and well.

ATTRACTIONS OF A HARDWARE WINDOW.

THE window of McLean's hardware store, 389 Talbot street, formerly the London Hardware Company, proved to have a too irresistible attraction for a turkey of a peculiarly large and "tough" disposition yesterday afternoon. The big bird, brought to market by an Indian, flew up to a near-by building, and could not be coaxed down, until shortly after noon, when it became curious to see something of the world. Selecting an attractive window, that of the McLean store, it made a dash straight for it. The 16-pound bird struck the thick plate glass with terrific force, shivering the glass into a hundred fragments. Despite its adventurous passage, the bird was apparently uninjured, for it proceeded full speed into the body of the store, creating a scene of wild excitement amongst the clerks and the large crowd of customers. The intruder was finally captured and turned over to its dusky owner. The broken sheet of glass over seven feet square, was a total loss, the insurance company having to pay Mr. McLean $34 just because this turkey was unable to resist the too tempting allurements of the bright hardware, which shows that even the turkeys know where to go for a good thing.—London Free Press.

OPENED OFFICE IN MONTREAL.

TAYLOR-FORBES CO., hardware manufacturers, Guelph, Ont., have leased a portion of the Lamplough warehouse, 9 De Bresoles street, Montreal, where they will immediately open up an office and showrooms, as well as a large warehouse, where a well-assorted stock of various lines will be kept on hand. This move on the part of this firm should meet with the approval of the hardware trade generally, especially the jobbers, for whose trade they exclusively solicit. The business will be in charge of Harry F. Moulden, general sales agent, who has been with the firm for a great many years, and is thoroughly competent to give the necessary attention to the business which it requires.

Taylor-Forbes Company have increased their business, under the present management over 150 per cent. during the past 12 months. They have also recently opened agencies in Halifax, St. John, and Vancouver. They are now completing an entire new plant for bronze goods, and this department will be in charge of one of the most experienced men in the country.

CATALOGUES, BOOKLETS, ETC.

HARDWARE AND METAL would be pleased to review catalogues, booklets or other such publications issued by manufcturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. No charge will be made for these services.

CHRISTMAS GREETINGS.

One of the daintiest greetings of the season was issued by the D. Moore Co., Limited, Hamilton. The feature of the card is an attractive bunch of holly tied with a bow of bright red ribbon. On the back the firm extend their compliments to their friends and customers and incidentally refer to their hopes of increased business during the new year.

THE READING HARDWARE CO.

The Reading Hardware Co., Reading, Pa., have demonstrated their progressiveness and good taste by issuing a beautiful souvenir book of the ninth annual convention of the National Hardware Association of the United States, held in Atlantic City in November. The book is full of excellent illustrations showing the many attractions and delights of the far-famed seaside resort. The booklet is one that will be preserved by all recipients, who will not fail to appreciate the courtesy of the company in sending it out. The Reading Hardware Co. are also sending out a catalogue of their "Vassar" front door lock sets, their bit-key front door locks and their door checks and holders. As the goods in this catalogue are among the most modern and fashionable offered to the trade the booklet is likely to be in great request, so if readers of "Hardware and Metal" desire one it would be wise to write early for it.

A RED LETTER YEAR.

Anyone who gets a copy of the New Year's greetings sent out by Henderson & Potts, Limited, Montreal, cannot fail to be interested. The message it bears is "With compliments and best wishes for a red letter year." This is followed by an original drawing of four men —or monkeys—each of whom is attaching the red letter to his neighbor's back. The card is indeed unique. Get one.

THE WATSON FOSTER CO.

The Watson Foster Company, wall paper manufacturers, Montreal, have sent out a beautiful New Year's card with greetings and best wishes. The card is a four-fold white sheet of fine quality, with an embossed stamp and a sprig of holly on the front, and inside, the compliments of the season. The entire design is very neat and tasty, and does not savor of advertisement.

MACHINERY

The Machinery Market.

TORONTO.

THE machinery market is reported to be quiet this week, there having been a slight falling off ever since last week. This quietness has reference to the amount of actual business transacted, not to prospective business. Of course this state of affairs is quite natural, and has been expected for some time, since not many enquiries were received during the last few weeks, which would lead to immediate business, and the business of those two weeks consisted chiefly in the filling of booked orders. This week's business has been the reverse of that, not very much actual business has been transacted but enquiries have been very numerous. In deed the past week has been rather remarkable for enquiries. They have not been confined to any special lines of machinery, but have been very general. Except for this unusual amount of prospective business, the market is rather featureless this week. It is expected that this market condition will extend itself throughout next week. Then the actual business of the year will commence. All Toronto machinery dealers seem well satisfied with the way things have been shaping themselves during the past week. They did not expect so many enquiries to be forthcoming during the first week in the year, and were consequently agreeably surprised at the number that did come in. So, considered from all points of view, this week has been as promising for a busy time to come as can be expected.

The A. R. Williams Machinery Co. report the market rather quiet, which was expected the week before. Prospective business is good, and therefore the prospects for a picking up of the trade in a couple of weeks are good. The market has been rather featureless this week, sales in no special lines of machinery attracting much attention.

The H. W. Petrie Machinery Co. report business quiet this week, there being quite a noticeable decrease of orders even since the previous week. However, that is very usual for the first week in the year, so that the firm are not at all disappointed in the amount of business transacted. The number of enquiries they have received during the past week are remarkable, and are very promising for a busy Winter and Spring. Otherwise there is no special feature on the market this week.

The Levy, Weston & McLean Machinery Co. report that they have not noticed much difference in the market this week. The falling off in orders have not been felt to any great extent by the company. They have had numerous enquiries and the prospects for a busy year are good.

The Jones & Moore Electric Co. say that business has been slacker during the past week than during the two previous weeks. They found it slacker in that they did not receive so many orders; but they had numerous enquiries which in all probability will lead up to substantial orders in the future. For the last three or four weeks Jones & Moore have been been trying to catch up on orders during the slack time. Mr. Moore says that during the past year they have doubled the capacity of their factory and consequently their staff have also been nearly doubled.

The Dominion Motor Machine Co. have been quite busy this week repairing automobiles. They are looking forward to a bright Winter and Spring.

The Fairbanks' Machinery Co. have not got their machinery department completely installed yet. They are expecting some machinery from Cincinatti and also from headquarters at Montreal.

—

MONTREAL.

A round of the various Montreal machinery houses shows a general feeling of optimism as to the immediate future of the Canadian market unless disturbed by conditions in the United States. This optimistic feeling prevails in spite of the recent failure of the James Cooper Mfg. Co. and the embarrassments of the Locomotive and Machine Company. In both these instances, it is held that the trouble was due to special circumstances and that the embarrassments of these firms can not fairly be interpreted as indicating a gloomy outlook for this market. The Locomotive and Machine Company were forced to ask for an extension of time of three, six, nine, and twelve months for different amounts owing for which they are giving notes. It is understood that they have secured the assent of the majority of their creditors to these terms and that they will continue in business. Those interested in the company have subscribed a sufficient sum for working capital. In the meantime any orders which they may place are guaranteed by some personal representative of the stockholders. It is further understood in Montreal business circles that the liabilities of the firm amounted to $850,000, of which $400,000 are held by the banks and $450,000 by trade creditors. The arrangement made is considered quite satisfactory in local circles and as indicating the confidence which is felt in Montreal as to the ability of the company to meet their obligations it might be mentioned that a couple of rather large sales by Montreal firms to the Locomotive and Machine Company are reported to us this week.

Montreal machinery men say that the embarrassments of these two firms have not so far, had the effect of keeping American machinery houses out of the Canadian market. The number of travellers who represent American machinery houses coming to this section of the country is on the increase and there are rumors of a slashing of prices. Local houses would not be sorry if American machinery houses were to take the alarm and decide to stay away. But they think this is too much to hope for.

The local market has not yet recovered from the quiet season which is always experienced during the holidays. Actual business this week has not been of very great volume and most houses report that inquiries are not quite so numerous as they would like to see. No serious alarm is felt, however, for the season is not far advanced and it is early yet to look for much business. Some large sales of machine tools are certain to be made before long to the Grand Trunk and Canadian Pacific

Railways. Both have been building new shops and neither has yet bought an adequate supply of machine tools with which to equip them. Other large buyers will soon place their orders. Hence the outlook in machine tools is good unless a depression in the American market should play havoc with values. In heavy machinery, large boilers and engines of considerable horse-power, prospects are also good.

The Laurie Engine Company report no particular change in conditions as described by them in our last issue. They have several contracts on hand for engines of very large horse-power and they are busy executing them in their St. Catherine street works. The demand for engines of small horse-power came during 1903 from a very wide area. Actual business in engines is still quiet but inquiries are numerous and the outlook is considered quite satisfactory. In machine tools and woodworking machinery, actual business during the week, although small, is considered quite satisfactory for the season. Inquiries for delivery two or three months hence are now coming in freely from a wide area. The Laurie Engine Company do not assume the role of prophets and are not prepared to forecast the future, but they are confident that if nothing happens in the United States to demoralize values there the Canadian machinery business should continue to prosper even more than in 1903 which was a record year.

The Fairbanks Company report some good business this week in machine tools. Inquiries for delivery two or three months hence are numerous and the general outlook is considered very satisfactory. Trade has not yet recovered from the slackness which is always incidental to the holiday season but that slackness has not been so pronounced as in some other years. Now that the holidays are over, some large sales are confidently expected.

Mr. Alfred Rubra, of the Machinery Exchange, reports that general conditions remain much the same as last week. Trade has not yet emerged from the dullness which is always experienced at this season. Prospects on the whole are bright unless the competition of American machinery firms has the effect of breaking values. Actual business this week is quiet, but some inquiries are coming in and a good trade is confidently expected during the next few months.

Mr. W. H. Nolan, of the Canadian Machinery Agency, reports business this week fairly active. Like other machinery men the only thing which he fears is a break in the American markets followed by sales in Canada at slaughter prices.

Williams & Wilson report a quiet, steady trade this week which is considered satisfactory for the season.

NEW YORK.

Manufacturers of machinery are expecting a normal year's business in 1904. All who were seen report that the year just closed has been equal to or better than previous years, and that in the beginning of the year business promised to be much in advance of the normal, but that it fell off in the later months. December, though, has in all cases shown a decided improvement, and the indications are that the opening months of 1904 will continue to show improved conditions.

Louis L. Brinsmeade, manager of the Westinghouse Machine Company, said: "We are looking for a much better business next year than any we have had. This is due to the fact that we are the leading manufacturers of steam turbines and gas engines, and that these machines are rapidly replacing others that were formerly used. The steam turbines in particular are in constanly increasing demand. All the big units that are being installed now are turbines, and we, of course, are getting the benefit of that business. The electric roads and big electrical power plants are all taking to this class of engine now to the exclusion of the Corliss engine, and our business in this line is growing right along. Business with us did slack up a little a couple of months ago, but it has fully recovered now, and we can see nothing in present conditions to indicate that it will not continue to improve. We have not experienced any difficulty with collections. The nature of our business is such that we seldom do have any difficulty in getting our money. Most of our customers are large corporations that are amply provided against any temporary stringency."

Machinery and Electrical Notes.

The Moose Jaw Machine Works, Moose Jaw, Assa., were completely destroyed by fire on Christmas day. The estimated loss is $4,500, which is partially covered by insurance.

The time for receiving tenders for the plant of the James Cooper Mfg. Co., Montreal, has been extended to Monday, January 11th.

The commission to go to Europe to investigate the different methods of electric smelting, has been appointed by the Government. It consists of Dr. Haanel, superintendent of mines, and C. E. Brown, assistant and works engineer for the Canadian General Electric Co., Peterboro. Dr. Haanel will secure in Europe the services of an expert metallurgist and such additional assistance as he may require to make a thorough investigation of the processes, and to determine the possibility of adopting any of them profitably in Canada.

Fire in Laurie Engine Co.'s Plant.

ON Wednesday, January 6th, a fire completely gutted the patent storage building of the Laurie Engine Company's works on St. Catherine street, Montreal, and resulted in a loss of between $15,000 and $20,000. The loss of the valuable patterns is a very serious matter for the company as it will be almost impossible to replace them.

The building was situated in the rear of the big engine works on St. Catherine street east. The foundry proper was saved, the only damage resulting from water and smoke.

The alarm sounded about 12.30 o'clock and when the firemen arrived at the foundry they found the pattern department burning fiercely. In a very few minutes the entire eastern division of the fire department were on the spot and very soon a dozen or more streams were playing on the flames. At one time it looked as if the engine works were going to be destroyed, but the work of the firemen was well directed and this disaster was fortunately averted.

It is understood that the loss is covered by insurance, but it can not fail to cause the Laurie Engine Company considerable inconvenience.

Iron Works to be Sold.

IN our advertising columns will be found reference to an important sale of the Northrop Iron Works, of Valleyfield, Que. These works consist of a valuable manufacturing plant including a machine shop, iron and brass foundry and carpenter shop. The plant is complete with modern equipment and there is some stock on hand. The buildings are thoroughly equipped with automatic sprinkler system, and they are

piped through for steam heating. The entire plant is run by electricity and there is also a complete electric lighting plant. The shipping facilities are of the best, both by rail and water. The Canada Atlantic Railway side track runs through the works.

This is a remarkably desirable manufacturing plant and the situation could hardly be excelled. It is only 35 miles from the city of Montreal by rail, either by C. A. R. or N. Y. C., and the same distance by water. The property is such as would be suitable for almost any manufacturing business.

The Stroboscope.

WHEN an engine, or machine is moving at great speed, its parts appear a mere blur to the spectator. Now an important improvement to a machine may depend on the possibility of realizing exactly how a certain part of the motion at full speed takes place. Such is the purpose and powers of the stroboscope. A movement that really takes place in the hundredth or thousandth part of a second may be seen drawn out to a quarter of a minute or more. The time of the movement may be magnified so as to enable it to be watched and examined at leisure.

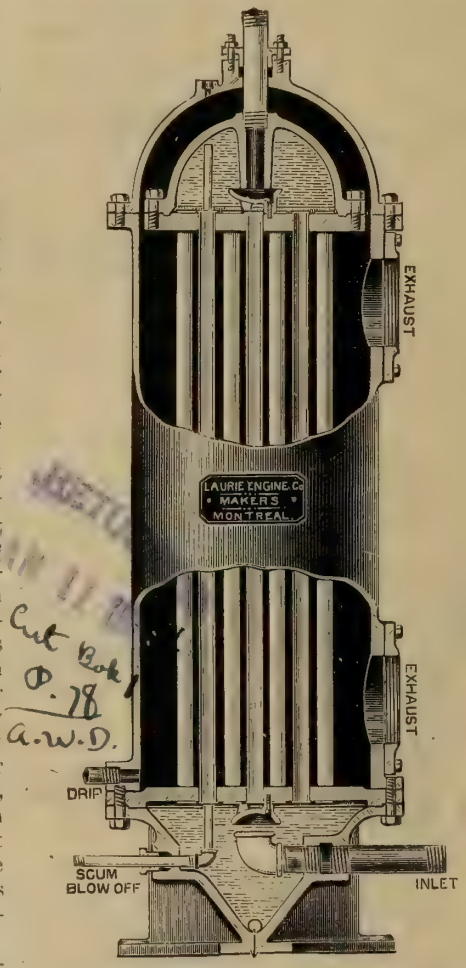
The means that produce this result are very simple. By means of an electric spark made at rapid recuring periods, or by a revolving disc in which are slits, passed before a lantern, the moving object is illuminated in a succession of flashes. If the flashes coincide exactly with the period of the machine's revolution they will show it always in the same position, and to the observer there will appear to be no motion. By slightly retarding the flashes, so that they will lag behind, the machine under observation will seem to move slowly, because at each revolution it is shown at a little later stage. Thus a movement too rapid for direct observation may be watched closely and analized the strains or vibrations at every point being clearly noted.

Thus with the stroboscope the formation of the stitch in a sewing machine, the exact way in which a petrol motor works, and a thousand other machine movements of lightning speed may be observed. The great glare of the arc lamp is not a continuous light but a succession of sparks caused by the alternating current, the intervals between which are so short that the nerves of the eye act too slowly to catch the rise and fall in the illumination. The stroboscope will throw the image of the arc upon a screen so that the rise and fall of the light appears to take place quite slowly. This the effect of different kinds of carbons, different rates of alternation and different methods of regulation can be judged.

Feed Water Heater and Purifier.

THE great problem which confronts all users of steam power is that of securing the most economical means of using fuel. Hence any device which can be used to lessen the consumption of coal and still secure the same or greater efficiency is always eagerly sought after. For this reason, "Hardware and Metal" takes pleasure in calling attention to the patent Feed Water Heater and Purifier manufactured in Montreal by the Laurie Engine Company.

In the description of this Feed Water Heater and Purifier, two well known



facts should be borne in mind. The first is that a very small proportion of the heat in steam is utilized in doing work. The greater portion is a waste product. The second is that the hotter the feed water the less coal has to be used to turn it into steam. The peculiar merit of this feed water heater is that it utilizes the exhaust steam, which ordinarily is entirely wasted, to heat the feed water and it thus proves its value as an economizer of heat, and therefore of fuel. These heaters, when applied as rated, will raise the temperature of the feed water to 208 or 210 degrees, and also reduce the back pressure on the engine by condensing a large portion of the exhaust.

The accompanying illustration shows the internal construction of these heaters. The shell of body, base, tube-plates and caps are made of cast iron, and the tubes of seamless drawn brass, thus making it practically indestructible. The tubes are firmly set in a lower and upper tube plate, the lower plate only being fastened to the body of the heater. The upper tube plate is not attached to the shell in any way, thus allowing for full and free expansion of the brass tubes independently of any other part of the heater. The advantage of this special internal construction (patented) of moveable tube plates is that by means of it the water may be heated almost to boiling point without any danger of tubes bursting or plates cracking through expansion or contraction.

The water entering feed "inlet" at base (and being distributed by deflector) passes slowly up through the tubes, absorbing heat from the exhaust steam with which the heater is filled, in its passage to the upper or discharge chamber, where it is still surrounded by exhaust steam, until discharged at top "outlet." The discharge pipe projects downward into chamber to avoid carrying any scum from the surface of water into the boiler, a scum blow-off being provided with discharge at bottom of heater as shown in cut.

The impurities in the feed water that precipitate at 208 degrees are deposited at the bottom of the heater, where provision is made for blowing off. The "drip" opening at bottom of heater provides for draining of condensation, and should be connected to drain and left open, as an accumulation of water in the heater tends to reduce its efficiency.

The tubes may easily be cleaned by removing top cover of shell and cap of discharge chamber, thus giving access to inside. Frequent cleaning is not necessary.

The advantages of this heater are many and obvious. The impurities in the water are precipitated in the heater and hence do not injure the boiler. The life of the boiler is prolonged also by supplying feed water at a high temperature, thus preventing unequal contraction, such as occurs when feeding cold water. As mentioned before, the back pressure on the engine is reduced by condensing a large portion of the exhaust.

These heaters are made in various horsepowers from 30 to 2,000. We understand that the Laurie Engine Company are now building three 2,000 horsepower heaters for the Toronto Street Railway Company.

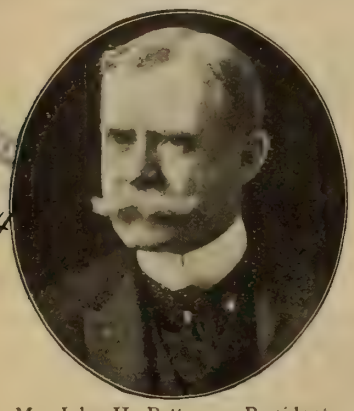
RED-LETTER DAY FOR CASH REGISTER MEN.

THE last week in the old year was a red-letter one, as far as the Canadian business of The National Cash Register Co., of Dayton, Ohio, was concerned. It marked the opening of the company's first factory in Canada. For some years the company has been doing business in Canada, but this business has grown to such an extent that it was found necessary to have machines for the Canadian market made in this country. The necessity for the factory was, to no small extent, due to the efforts of Mr. F. E. Mutton, the district manager, and his staff of salesmen. In fact, members of the selling staff of the Canadian branch of the business have more than once carried off the honors in the company's world-wide service for the largest number of machines sold.



Mr. John H. Patterson, President

The factory, which is under the management of Mr. J. W. DuLaney, was formally opened on December 28th, as already reported in the columns of this paper. On the three following days conventions were held at the King Edward Hotel, where practica demonstrations appertaining to the work of organization were given by the various heads of departments and the sales agents in the employ of the company.

On Wednesday evening a banquet was held in the private dining-room of the King Edward Hotel. It was a function of unusual interest and success. It was also remarkable for its uniqueness. Mr. F. E. Mutton, district manager, was in the chair, and Mr. Crane, of Dayton, Ohio, one of the veteran sales agents of the company, was toast master. Mr. H. Chalmers, of Dayton, Ohio, general manager of the company, and several other officers from headquarters, occupied seats of honor at the guests' table. Among the guests were also a number of ladies which, of course, added much grace to the function.

Factory at Toronto—Front and Rear View.

After the tables had been cleared stereopticon views of the factory and workmen's homes at Dayton were given, Mr. Thomas being the lecturer for the occasion. The views were perhaps the finest of the kind ever seen in Toronto. They were of enormous proportions and were in natural colors. A number of the views showed the different stages in the development of the factory and also in the improvement of the workingmen's homes. The transformations thus shown were greeted with loud applause. For some years The National Cash Register Co. has awarded prizes for the best lawns and back-gardens in the workmen's homes, and the work that has been accomplished in this direction is simply marvellous. After the views had been disposed of, the toast list was taken up, and it was well after midnight before the last toast was proposed and duly honored.

Mr. F. E. Mutton, District Manager

The one thing which probably impressed those outside the members of the firm and their employes who were present was the marked esprit de corps which existed among the heads of the firm and the different employes.

Hugh Chalmers, General Manager.

Although I know nothing about cash registers beyond the fact that they are a good thing for merchants generally, I felt the influence of this esprit de corps. Every sales agent present appeared to be possessed of the idea that there was nothing in the world like the National cash register, and no other firm in the world equal that which manufacture it.

When Mr. Chalmers, the general manager, arose to speak he was received with a warmth of enthusiasm which scarcely could have been exceeded. Although he is a young man, less than 30 years of age, and some 16 years ago entered the employ of the firm as an office boy, every employe, old and young, holds him in the highest esteem almost to the point of adoration.

"Why is it," I remarked to a well-known sales agent of the company, "that you men exhibit such strong loyalty for your company and its interests?"

"I'll tell you why. It is because they treat us 'white' and we know that if we do our duty they will recognize the fact in a substantial way. And then we believe in the merits of the goods we sell."

The Factory at Dayton, Ohio.

District Manager Mutton was "caned" about 11 o'clock, and Mr. Du Laney, was presented with a valuable umbrella by the local sales agents.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITICISM

Edited by John C. Kirkwood, TORONTO.

NOTE—Herein are discussed the principles and practice of advertising. Subscribers are invited to send Mr. Kirkwood specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

Profitable Advertising for Hardware Dealers.

IN looking through a goodly number of Canadian weekly newspapers—dailies, too,—for examples of advertising, I was struck with the absence of hardware advertisements. There were dry goods announcements in abundance, but comparatively little hardware advertising. Just how to explain this condition of affairs is hard. It would seem, however, to indicate that the hardware dealers belittle the value of advertising; that is, so far as their business is concerned. It seems to indicate, too, that newspaper publishers have not been very active in the direction of the development of advertising. Just here I may say that, judging from my own experience, weekly newspaper publishers are not very good or very aggressive advertising solicitors, notwithstanding the fact that their prosperity depends very largely upon the amount of advertising carried in their newspapers. I cannot do otherwise than consider it short-sighted and a misuse of opportunity for a hardware dealer of any pretension or ambition not to advertise. Accordingly, I desire at this particular time, at the opening of a new year, to talk over very briefly this subject.

With a good many, the question of cost is the barrier that stands in the way of their advertising. The uncertainty of its "paying" is a sufficient reason for them to refuse to spend money on advertising. The intangible character of the transaction is so present with them in their consideration of the subject that they think of advertising as nothing more or less than a gamble. Others, again, are unable to judge the value of newspaper space, and are inclined to think any proposal by a publisher as being decidedly too profitable for the publisher, and dislike exceedingly to enter into any contract where the profits are so enormous.

This question of the cost of advertising is very apt to be viewed in a very wrong and narrow way. No newspaper publisher can guarantee that an advertisement in his paper will be profitable, yet this is just what many a merchant wishes the publisher to do. A publisher sells space, nothing more, nothing less. He offers space in his paper, three inches deep, six inches deep, one column wide, two columns wide, three columns wide. He sells space, and this space is worth money; how much money depends upon the extent and character of the circulation. He gives merchants an opportunity through the use of space in his paper to tell the community what to buy, and where to buy. This opportunity varies in worth: If the newspaper has a circulation of 1,000, it is worth so much; if the circulation be 2,000, or 5,000, the opportunity is worth a good deal more. That is, space in a paper with a large and choice circulation is worth more than space in a paper with a small circulation. An opportunity to tell 500, 1,000, or 3,000 families, a large portion of whose money is being spent daily for hardware, why this money should be spent at one store rather than at another, is worth no small sum to a wideawake, aggressive, ambitious retailer. Such a man has every week several excellent reasons for inviting these families, the heads of households, to his store, and there is no cheaper, speedier, better way to acquaint buyers with his weekly offerings than by engaging space in a local paper.

This leads me to say that the burden of sale is not on the publisher but on the merchant. The publisher sells space, but the profitable use of space sold lies with the merchant. If a hardware dealer, for example, who buys space, neglects to use it intelligently, brightly, persuasively, he cannot expect his advertising to be profitable, and, if he be honest, he will blame himself for the failure. Having an opportunity is one thing; the right use of an opportunity is quite another thing. We all have known men to own horses which stand idle in their stalls most of the time, or else wander about a big pasture field. They do no work: yet we do not say the horses are no good. It is their owners whom we censure. So is it with much advertising: Some advertisements stand unchanged week after week, using up space which must be paid for; and some ramble so that they fail to sell a penny's worth. Such advertising is costly, because it represents waste.

The dealer who advertises, or, rather, who thinks he is advertising, by engaging space in his local paper and then giving neither time nor attention to a right use of this space, might just as well cancel his contract.

In dismissing this question of the cost of advertising let me say that a better question is—What will advertising yield? Advertising can yield, will yield, and does yield a most profitable return on the money spent—if done rightly. I know hardware dealers in towns where conditions are much the same as those that exist in almost every community this whole country over, who are ready to say that they could not do business without advertising. The cost of advertising doesn't concern them: the necessity of advertising was long ago admitted. The business-producing power of advertising is daily perceived. But these men put their whole thought into their announcements to the public and fill the space they employ with news that throbs with the activity of a busy store.

The purpose of this department of Advertising Suggestion and Criticism in "Hardware and Metal" is to assist retailers in their advertising. If any hardware dealer feels himself unable to write advertisements that will sell goods, he will find in these columns every week something calculated to help him in this direction; if his difficulties are not being met or touched upon, he is urged to write a personal letter to the editor, who is ever ready to give what assistance he can to any interested in this department.

There is another phase of the advertising problem related to cost, yet quite another matter; namely, the question of what space to use. It will be found in most cases that a small, short, pointed, specific, nicely set up advertisement will do more work than one which is long, indefinite, and loose looking. The temptation is to tell too much, and the danger of a long story is that most of it will be forgotten. There is waste in advertising, some of it inevitable, just as the carpenter's plane makes waste; some of it preventable. And there is a waste in not advertising. The greater waste is the latter.

PRICES CHANGES OF THE WEEK.

HARDWAREMEN generally have learned to look upon the first week in January as one of the most important during the year, because of the meetings of manufacturers to discuss business conditions and to reach where possible a basis of prices for the ensuing season.

The majority of these meetings have been held, and while they were behind closed doors the decisions reached have been given out and will be found of wide interest. Among the many lines affected by the meetings are: Stamped ware, coiled spring, galvanized, plain and barb wire, cut and wire nails, screws, rivets and burrs, tacks, bolts and nuts, lead pipe, shot and soil pipe.

One proof of the steadiness of trade conditions in Canada was furnished in the fact that of the great variety of stamped ware productions only one new price was established, the discount on creamery cans being changed to 50 per cent.

In several lines the influence of lower prices in the United States was felt in a slight degree. Reductions of 5c. per 100 lb. are noted in coiled spring wire and in galvanized, plain and barb wire. It is now well understood that the price on galvanized, plain and barb wire is fixed on a basis arranged by the American Steel and Wire Co., and the Canadian maunfacturers. No reason is assigned for the reduction other than the lower basis of steel prices in the United States.

In wire and cut nails prices have been fixed at the present basis until May 1, after which prices will depend on existing conditions.

In contrast to the reductions noted is the action of soil pipe manufacturers who have advanced prices by a reduction in the discounts.

Another decision recently reached was that of Canadian manufacturers of low wheel lawn mowers to allow jobbers to sell their wheels at open prices. This was done to meet American competition In these goods, which has been felt in some districts. No change has been made in high wheels, as in these Canadian manufacturers have so far been able to hold the home market.

In addition to these changes by manufacturers an important change in tin is noted. In the outside markets this metal has been exhibiting much strength for some time, and the local market has this week followed the lead of primary markets by an advance of $1 per 100 lb.

INDEPENDENCE OF PARLIAMENT.

AS an academic proposition few people would deny that members of Parliament should not be appointed to places of emolument. It is desirable neither that the vulgar place hunter should be encouraged nor that the man of independent principles should be seduced from the course marked out by his best judgment, by the insidious temptation of the place bribe. Even hardened politicians will accept this proposition—when in opposition.

Back in 1893-94 "Hardware and Metal," conducted a campaign along this line and found a doughty champion in the present Postmaster-General, who read extracts from editorials in this paper in the House and moved a resolution affirming the principle that no member of Parliament should be appointed to a public office of emolument while sitting in the House or until two years after ceasing to sit therein.

It is not to be assumed that Sir William, now a knight sans peur et sans reproche, and one of his Majesty's Privy Councillors for Canada, ripened with years and experience, is less zealous for the independence of Parliament, and the political morality of its members than when plain William Mulock, member of her Majesty's loyal Opposition, he fought side by side with "Hardware and Metal" to eradicate the blasting canker of patronage.

And yet Mr. Blair has been appointed chairman of the Railway Commission, Mr. Blair, who opposed the Government's transcontinental railway policy, who resigned from the Cabinet, who uttered the bitter words "Cox can't wait," and who voted with Mr. Borden and Mr. Tarte against the Government on this imoprtant measure. Then Mr. Blair becomes quiescent, his official organ declares that since the thing is done the only recourse is to support the Government. A pause ensues. After the pause Mr. Blair is announced as having been appointed to the chairmanship of the Railway Commission.

The shock this appointment must have been to the redoubtable champion of parliamentary independence and present Postmaster-General can better be imagined than described. Let us draw a veil.

With Mr. Blair's personal fitness for the position no exception can be taken. He was an admirable Minister of Railways and the service he rendered his country in connection with placing the Intercolonial on a sound business basis, will not soon be forgotten. It is doubtful if a man better qualified for the position could have been found. But in consideration of the principle at stake it would have been better had one perhaps slightly less qualified been appointed. The Liberal party in Opposition was unflinchingly opposed to the appointment of members of Parliament to office. The case of Mr. Blair is a particularly flagrant one, all things considered, and we are convinced that there are many friends of the Government who will agree that the appointment was ill-advised.

THE SIGNIFICANCE OF C. I. F. DECISION.

IN another column will be found a summary of the remarks made by Mr. Justice Trenholme in giving judgment in favor of The Canada Hardware Company in their action for damages against Suren Hartmann & Company, of London, England, for injuries by rust to a quantity of metallic goods bought by the former on a c.i.f. contract. The decision is a complete victory for the plaintiffs, and as such is of great interest to all importers and manufacturers' agents. The question has been a vexed one for some time, and there is a general feeling of satisfaction that the obligations of a seller under a c.i.f. contract are now clearly defined by the decision. All uncertainty on the point is now removed. The purchaser has a right to expect the seller to effect complete insurance, and the seller who neglects to do so is liable for damages in case of loss.

The evidence given at the trial made plain one or two things. It was quite evident that there has been a great diversity of custom as to the kind of insurance effected under c.i.f. contracts. It was also evident that in some quarters there is not a very clear understanding of the difference between the different kinds of marine insurance.

There are two kinds of marine insurance policy. The first is the policy which was obtained in the present instance, known as f.p.a. (free from particular average). This is simply insurance against total loss only, as no damages will be paid under such a policy unless the injury occurs through the stranding, sinking, burning or collision of the vessel. The cost of such partial insurance is about one-third the cost of the "with average" policy, which provides complete insurance, covering partial as well as total loss.

It is a satisfaction to business men to have this vexatious question settled. No person questions the bona fides of either party to the contract. Custom has not been well established either way. Mr. Lomer has for many years been selling goods on c.i.f. contracts, and it has always been his custom to effect this limited kind of insurance. On the other hand, the plaintiff never doubted that he was receiving complete insurance. The decision is of interest and importance to all business men.

CANADA DISCUSSED.

THE Sheffield Daily Independent, of December 12th, 1903, received a few days ago, contains an interesting account of a meeting of the Sheffield Chamber of Commerce and Manufactures held on the evening of December 11th for the purpose of receiving the report of their delegates to the big congress held in Montreal last August. Mr. W. F. Beardshaw, the president of the chamber, and one of the prominent delegates occupied the chair. He said that a strong desire had been expressed by the members of the chamber to discuss the fiscal question, but this night was to be devoted to Canadian business. His own opinion, and that of the council generally, had been that it was necessary first to gather all the facts available with regard to English trade and the possibility of extending it in the colonies. With that end in view they had already collected a small library on the subject for the benefit of the members. The chamber could not discuss the question intelligently until its members had made themselves acquainted with conditions in Canada. He would ask the delegates to give a resume of the results of their visit without expressing any opinion on the fiscal question which was so prominent during their visit.

It has been the fashion among some Canadians to ridicule the Englishman's ignorance of conditions and places in this country. As was pointed out once before in these columns this ignorance is no more remarkable and no more to be condemned than the lack of geographical knowledge which the average Canadian displays regarding England and the other parts of the Empire. People who live in glass houses should not throw stones. But it would do the Canadian scoffer incalculable good to examine carefully the report in this English paper of the intelligent discussion of Canadian potentialities by the Sheffield Chamber of Commerce. We doubt if an average gathering of Canadian business men could discuss English affairs any more intelligently.

The transcontinental tour of which advantage was taken by so many of the delegates to the congress, was a happy idea. It was perhaps the best advertisement that Canada ever received, for every English delegate returned to the old land much impressed with the potentialtities of the premier colony. And the delegates are all men of weight and influence in their community. The speakers at the Sheffield meeting had all profited by their tour. They under stood something of the immensity of the country and they impressed strongly upon their fellow members the fact that there are practically inexhaustible resources in Canada waiting to be developed. In discussing the proposed changes in the Empire's fiscal policy it is necessary to consider not merely the Canada of to-day with her growing, but limited, market, but the Canada of the near future with several times her present population.

The delegates described their trip through the Northwest in the harvest time, and it was evident that they fully appreciated the force of Canada's claim

A LIFE SYMPHONY.

To live content with small means; to seek elegance rather than luxury, refinement rather than fashion; to be worthy, not respectable, wealthy not rich; to study hard, think quietly, talk gently, act frankly. To listen to stars and birds, to babes and ages with open heart; to bear all cheerfully, do all bravely, await occasions, hurry never—in a word, to let the spiritual unbidden and unconscious grow up through the common: this is my symphony. —Canning.

to be the "granary of the Empire." British Columbia with its magnificent possibilities as a lumbering and mining country was not forgotten. Ontario, Quebec, and the Maritime Provinces with their great industrial possibilities were passed in review. The delegates had no hesitation in saying that the Eastern portion of Canada has a wonderful future before it. Notwithstanding its vast proportions and great extent of natural deposits necessary to industrial success, it is apt to escape the attention it deserves because the interest of the general public has been more directed to the great wheat growing tracts of the West.

JOHN S. COLE, JR.

Recently appointed to represent U. M. C. ammunition Remington rifles and B. G. I. sporting goods in Canada

The delegates remarked that in the industrial establishments visited by them in Canada they noticed an anxiety on the part of the workmen to produce as large an output as possible. There was no disposition among them, as among some English workmen, to restrict the output. Canadian manufacturers were found anxious to use the latest labor-saving machinery and their men agree with them.

The transcontinental tour has made many English missionaries who are effectively preaching the gospel of Canada's boundless resources.

THE LATE MR. SAMUEL COULSON.

IT was with great surprise and regret that Montreal business men read in their evening papers of Tuesday, January 5th, of the sudden death that same day in Toronto of Samuel Coulson, general manager of the firm of H. R. Ives & Co., Montreal. Mr. Coulson was visiting in Toronto at the home of his brother, Duncan Coulson, general manager of the Bank of Toronto, when he was taken so suddenly ill. His death, which is attributed to heart failure, was a great surprise to all his friends, for when he left Montreal on Sunday night last he was apparently in the best of health. Only a few days before his death he called at the Montreal office of HARDWARE AND METAL to examine some back files of the paper. He seemed then in the best of health and spirits, and he chatted cheerily of the business prospects for 1904.

The late Mr. Coulson was one of the foremost business men of Montreal. He was a son of the late Samuel Coulson, of the Bank of British North America, of Toronto, in which city he was born, but he has been for many years a resident of Montreal, and one of her most prominent citizens. He was a man of pronounced strength of character, endowed with pleasing social qualities, and possessed of strong business instincts and enterprise. He was an active member of the Montreal Reform Club, and being a man of readiness, energy, and facility of expression he did excellent service on the club's council. For many years Mr. Coulson was an ardent supporter of the M. A. A. A., and he always took an active interest in all wholesome sport. Shrewd in business, he was also the soul of good nature, and he never missed the opportunity of saying a kindly word or assuaging the hurt feeling. He will be remembered chiefly for his social qualities.

Mr. Coulson attained an early success in business in handling the assets of bankrupt manufacturing and wholesale firms. For a number of years he was a bidder upon practically every property of this sort which came upon the market, and in this way he became possessed of the assets of many bankrupt firms, a few of which were re-established, but most of which were wound up. It was in this way that in 1891 Mr. Coulson became possessed of the assets of the firm of H. R. Ives, iron moulders of Montreal. His intention was to wind up the business, but the market for foundry property was not then very promising, and on further examination he became convinced that there was a good opportunity to build up a successful business for himself. Instead of selling the plant, he took personal charge of it, operated and added to it, and the result of his personal supervision is the building up of one of the most important industrial concerns of Montreal. To the foundry business he added an art iron and a brass bed branch, each of which is one of the largest of its kind in Canada. A few months ago Mr. Coulson organized the business as a joint stock company, of which Mr. H. R. Ives is president and Mr. Coulson himself first vice-president and general manager. Mr. Coulson's death will therefore not interfere with the operation of the business.

The late Mr. Samuel Coulson.

Mr. Coulson was interested in many other firms, among which might be mentioned that of Coulson, Quinlan & Robinson, who have been awarded a million dollar contract of canal repairing on the Lachine.

Mr. Coulson was still in the prime of life. He leaves a widow, but no children. The funeral took place privately in Toronto on Wednesday, January 6.

BUSINESS MEN ELECTED.

"HARDWARE AND METAL" is desirous of securing a list of business men who have been elected to the positions of reeve or mayor in the various municipalities throughout the country. Friends would confer a favor by sending such information to the Editor of "Hardware and Metal." The full name and particular line of business engaged in by the new public servant is desired.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Hardware.

Montreal, January 8th, 1904.

BUSINESS has not yet emerged from the dullness which is always experienced during the holiday week. Most of the jobbers have now finished stock taking, but many of their retail customers are just commencing this rather unpleasant but absolutely necessary task. Until stock taking operations are concluded business can not be expected to be very brisk. A few sorting orders for shelf goods have been filled during the week, but on the whole trade is still very quiet. There are not many changes to record this week. Barb and galvanized wire have been reduced 5 cents. It is said that the reduction has been made in order to meet the competition of the English makers who have recently succeeded in placing a few orders in this country. All cotton goods are advancing and prices for cotton rope, sash cord and similar goods are very stiff. The position of manila hemp is very strong also. Payments are said to have been fairly satisfactory. Paper for very considerable amounts had to be met on the 4th of the month and few extensions of time were asked for.

Spring Hinges—Frequent inquiries are reported for spring hinges for 1904. Prices for this season are as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Wire Nails—Trade is now very quiet. Mills are still closed down for stock taking and repairs. At time of writing a meeting of the manufacturers is being held at Toronto at which some changes in price may be decided upon. If any changes are made at this meeting they will be announced in our next issue. We quote as follows: $2.40 per keg in carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

Cut Nails—The same remarks apply to cut nails, trade in which has been quiet since the close of navigation. We quote: $2.45 per keg f.o.b. Montreal; car lots $2.40.

Fence Staples—There is no actual business this week, but a few inquiries for Spring delivery are reported and the outlook for good 1904 business is considered very satisfactory. We again quote as follows: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c extra.

Pressed Spikes—The discount is 25 per cent.

Horsenails—Trade is quiet this week at the following unchanged discounts: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—Trade is now very quiet and there is nothing of interest to note. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.ob. Montreal onlv.

Sleighbells—There was an excellent holiday trade in this line and a few orders are still being received. We quote the following prices: Back straps, 30c. to $2 each; body straps, 70c. to $2.50 each; shaft gongs, 2 bells, 20c.; 3 bells, 35 to 60c.; 4 bells, 55c. to $3 each; brass team bells, No. 1, $1.90 per dozen; No. 2, $2.40 per dozen; No. 3, $2.70 per dozen; No. 4, $3.70 per dozen; No. 5, $4.65 per dozen; York eye bells, No. 10, $1.35 per dozen; No. 12, $1.65; No. 14, $1.90; saddle gongs, $1.10 to $3 each.

Skates—Trade is now on the quiet side after the holiday rush. A few sizes have been pretty well cleaned out of the wholesale stocks and they would be difficult to obtain at present. Prices remain unchanged as follows: Halifax pattern, 37c. per pair; nickel-plated, 65c.: ladies' nickel-plated, 55c. to $1.25; ladies' concave nickel-plated, $1.45; plain hockey, 27c to $1.35; nickel-plated hockey, 60c. to $2.50; double end hockey, $1.65 to $3. Skate straps, 70c. to $1.35.

Hockey Sticks—Wholesale stocks are pretty well cleared out now that the holiday trade is over. One or two houses have been offering special price inducements in order to clear out the small supplies remaining in stock. Prices of all wooden goods are advancing and hockey sticks are almost certain to be dearer next season. We quote as follows: Best second-growth goalkeeper's, $3.80 per dozen; ash, $2.70; elm, $2.18; boys' elm, $1.10. Regulation pucks, $1.50 per dozen; boys', $1.15 per dozen.

Fire Shovels—Still in seasonable demand. We quote: No. 70, 39c. per dozen; No. 55, 55 to 82c. per dozen; No. 57, 82c. to $1.10 per dozen; No. 60, 70 to 88c. per dozen; No. 65, $1.10 to $1.23 per dozen; Duplex, No. 7, 96c. per doz.; No. 9, $1.20 per dozen; No. 11, $1.54 per dozen.

Snow Shovels—In seasonable request at unchanged prices. We quote the following prices: "Habitant," $2.50 to $2.75 per dozen; "Victor," 30 per cent. off; steel railroad shovels, 45 per cent. off.

Screen Wire Cloth—As expected, there has been an advance in screen wire cloth which is now quoted at $1.50 per 100 square feet, an advance of 7 1-2 cents. Orders are now being booked freely for future delivery.

Galvanized Wire—As noted above there has been a reduction of 5c. per 100 lbs. this week. Inquiries for 1904 trade have been coming in more freely this week and it is expected that some business will follow the announcement of the new prices. We quote the following reduced prices: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.50; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12. $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. extra per 100 lbs. will be charged.

Barb Wire—In barb wire there has also been a reduction of 5 cents per 100 lbs. The remarks above will apply to barb wire. Inquiries have been frequent and it is believed that good business will follow the anouncement of new prices. We quote as follows: $2.75 per 100 lbs. f.ob. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—The market continues quiet and without special feature. We quote following unchanged prices: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.: spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.; hay-baling wire, 20 to 25c.

Fine Steel Wire—Trade is quiet at present. The discount continues 25 per cent. with net extras as follows: 1 and 2-lb. hanks, 25c. per 100 lb.; 1-2-lb. hanks, 37 1-2c., and 1-4-lb. hanks, 50c.

Brass Wire—Business is fair at unchanged discount, viz., 60 per cent.

Copper Wire—Business fair: discount 60 per cent.

Rivets and Burrs—Trade is now very quiet and the market is without special feature. The discounts are still as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs,

in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—Some American bolts and nuts are still being offered on the Canadian market, although the recent increase in discounts has helped to keep them out. The bolt manufacturers are meeting in Toronto this week. We again quote the following prices: Carriage bolts, common ($1.00) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1.00) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1.00) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3.00) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes, 4c. per lb. off; nuts, hexagon, all sizes, 4 1-4c. per lb. off.

Washers, 45 per cent. off.

Cutlery—Trade is now comparatively quiet after the holiday rush which was the biggest on record. A few sorting orders have been filled during the week.

Screws—Trade is entirely of a sorting nature at present and its volume is not very large. We again quote the following discounts off list prices: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—Trade is dull and there is nothing to note. We again quote: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

Lanterns—We quote as follows: Lift, hinged or tilt, $4 to $4.25 per doz.; cold blast No. 2, $7 to $7.50; painted dashboard, $6.50 to $6.75; plain dashboard, $6 to $6.25; searchlight, $20 to $24 doz.; brass cold blast, small, $9.75 to $10.

Cordage—The cordage market is very firm at present. The remarks made in a recent issue of "Hardware and Metal" on the condition of the market are confirmed by the following extract from the Cordage Trade Journal of December 17th, 1903:

"Quotations are extremely firm on first quality manila cordage, as the raw material has advanced in value, the better grades of manila fibre—such as are used in first-class manila cordage—being scarce and bringing extraordinary premiums over fair current fibre. Under such circumstances low prices for manila rope can only mean inferior goods. Those who risk life and property should not buy any maila rope that is not above suspicon."

All cotton goods are advancing and a rise in cotton rope and sash cord will be noted below. We quote: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11c.; single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 21c.; cotton twine, 20 and 23c. for 3 and 4 plv. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 29c.

Building Paper—Trade is very quiet at present. We again quote: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

Cement—There is nothing doing at present and not activity can be expected until Spring. We again quote the following prices: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—Trade continues very disappointing. Prices are unchanged, English being quoted at $16 to $22 per 1,000, and Scotch at $17 to $22.

Plumbing Goods.

The long continued activity in plumbing goods has quieted down and had it not been for the demands from the city trade for iron pipe and similar supplies to repair leaks and bursting pipes consequent to the extreme cold there would have been little business this week. Prices of solder have stiffened a trifle in sympathy with the advance in tin. Iron pipe continues easy but other supplies are firmly held.

Lead Pipe—A good average trade is reported this week at firm and unchanged prices. Composition and waste are selling at 8c. and ordinary at 7c. The discount is 35 per cent.

Iron Pipe—The cold weather caused the bursting of many pipes in the city, and in consequence there have been many hurry calls from city plumbers. This has in fact been the feature of the plumbing market this week. Prices are easy, and as has been remarked in these columns for some weeks back concessions of as much as 10 per cent. are obtainable for good business. Subject to these remarks we again quote as follows: Standard pipe, per 100 feet, in lengths under 19 feet—black, 1-8-in., $2.30; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55. Galvanized—1-4-in., $3.20; 3-8-in., $3.45; 1-2-in., $3.90; 3-4-in., $5; 1-in., $7.20; 1 1-4-in., $10.05; 1 1-2-in., $12.20; 2-in., $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in., $4.20; 3-4-in., $5.25; 1-in., $7.55; 1 1-4-in., $10.55; 1 1-2-in., $12.75; 2-in., $17.60. Galvanized—1-2 in., $5.20; 3-4-in., $6.65; 1-in., $9.55; 1 1-4-in., $13.25; 1 1-2-in., $16; 2-in.. $21.

Soil Pipe and Fittings—In steady request at the following unchanged discounts from the list prices: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—In sympathy with the strong tin market ther has been an advance in solder. We now quote: Wire solder, 18c.; bar, 17 1-2c.

METALS.

Stock taking is interfering with business this week and will probably continue to do so for another fortnight. Buyers are not willing to load up with new stock until stock taking is completed. In pig iron there is nothing doing this week. Canada plates have stiffened in primary markets as much as 2s. 6d per ton. There have been numerous inquiries during the week and buyers have made offers which we understand have not been accepted. There is considerable inquiry for galvanized iron and some large orders will likely be booked very soon, but actual trade this week has been on the quiet side. Tin continues to rise in the primary markets and sympathetic advances have been made locally. Tinplates are also very firm. A few small sales were made this week.

Pig Iron—As stated above, trade is still very quiet owing to the fact that most buyers are busy stock taking. Londonderry iron is not yet on the market but will be very soon . We quote: Summerlee, $19.25 to $19.75; Carron, No. 1, $21; do., No. 3, $18.50 to $19; Middlesboro', No. 3, $17 to $17.50; Ayersome, No. 1, $20; do., No. 3, $19.40.

Bar Iron—Business is dull this week and the market is not regarded as particularly strong. Quotations remain as before. Merchants' bar, $1.85; horseshoe iron, $2.10; forged iron, $2.05.

Black Sheets—Prospects are good for an active trade later on. Inquiries are numerous but actual business is not very great this week. We quote: 28 gauge, $4.25; 26 gauge, $2.40; 22 to 24 gauge, $2.35; 18 to 20 gauge, $2.30, and 8 to 10 gauge, $2.40.

Galvanized Iron—Inquiries are numerous at present and some heavy buying is expected before long. Actual business this week is not very considerable. We quote as follows: Gorbal's "Best Best," $4.30; 28 Queen's Head, $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates—Some sales are reported this week, but not of very large quantities. In sympathy with the advance in tin, tinplates are very firmly held. We quote generally: Cokes, $3.75 and charcoals, $4.

Ingot Tin—In sympathy with the stiffening in primary markets local prices

have been marked up. Some good sales are reported to have been made during the week as the indications point to a still further advance. The lowest price obtainable now would be 32c. and an order would require to be large to be filled at that price. For small quantities the price is 32 1-2 to 33c. and a further advance is probable.

Terne Plates—Business is said to have been quite active this week. Prices range from $6.75 to $7.

Coil Chains—Trade continues fairly active at the following prices: No. 6, 10c; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 3-8-in., $4; 7-16-in., $3.80; 1-2-in., $3.70; 9-16-in., $3.55; 5-8-in., $3.35; 3-4-in., $3.30; 7-8-in., $3.25; and 1-in., $3.20, with 10c allowance on carlots.

Canada Plates—As noted above prices have stiffened on the primary markets. There have been numerous inquiries but little actual business during the week. We quote as follows: 52s., $2.40; 60s., $2.45 to $2.50; 75s., $2.55; full polished, $3.60, and galvanized, $4 to $4.10; galvanized, 60s., $4.25 to $4.35.

Steel—Business is only fair. We quote: Sleighshoe, $1.95 to $2; tire, $2 to $2.10; spring, $2.75 to $3; reeled machinery, $2.75 to $3; toe calk, $2.60; machinery (iron finish) $2.50; square harrow, $2.50.

Tool Steel—A satisfactory volume of business is passing at the following unchanged prices: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Jonas & Colver's, 10 to 20c; "Air Hardening," 50 to 65c. per lb.; Conqueror, 7 1-4c.

Ingot Copper—Prices as quoted last week remain unchanged. Quotations are being well maintained as primary markets are firm. We quote: $13.50 to $13.75 per 100 lbs.

Pig Lead—Quoted at $3.20 to $3.30.

Sheet Zinc—Business is fairly active at steady prices. We quote $6.15 to $6.25 for cask lots; smaller quantities, $6.50.

Zinc Spelter—The price is 6c.

Scrap Metals—Trade continues very quiet and there are no changes to report this week. We quote the following prices: Heavy copper and wire, 9 1-2 to 10c per lb.; light copper 10c.; heavy red brass, 10c.; heavy yellow, 8 1-2c.; light brass, 5 1-2c.; lead, 2 1-4 to 2 1-2c.; zinc, 2 3-4 to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $13 to $15; stove plate, $12; mallable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers 6 to 6 1-2c. per lb.

Ashes.

The market is without special feature to note. We again quote:

First pots, per cwt	5 95	6 00
Seconds		5 55
Pearls, per 100 lb	7 00	7 25

Hides.

Receipts from country points continue to be liberal. Quebec is not taking any very large supplies and the market is therefore not particularly strong. We quote::

No. 1 beef hides	0 08	0 08½
No. 2 "	0 07	0 07½
No. 3 "	0 06	0 06½
Lambskins		0 75
No. 1 calfskins		0 10
No. 2 "		0 08

ONTARIO MARKETS.

Hardware.

Toronto, January 9, 1904.

THE feature of the situation during the week is the meetings of various manufacturers' associations to discuss their prices for the year. Among the lines represented were lead pipe, shot, coiled spring, galvanized, plain and barb wire, wire nails, stamped ware, cut nails, rivets and burrs, tacks, screws, bolts and nuts. Reductions of 5c. are reported in coiled spring, galvanized, plain and barb wire. A new price has been made for creamery cans. Soil pipe is 5c. higher. Otherwise there is no change, manufacturers deciding that the conditions warranted the continuance of present quotations. Travellers started on the road last Monday, but have not done a large volume of business, as there has been a general disposition to defer buying until prices had been fixed. The general opinion is that prospects are excellent, that the Spring trade in all parts of the country will be well up to the high mark of former years. The only depressing influence is the offering of American goods in this market. This is not general, yet is frequent enough to make many manufacturers uneasy and to create a widespread feeling of conservatism as to the output of many lines for the season. The present year is likely to be one which will call for sound judgment on part of buyers. It would be well for all such to guard against too great caution in buying as the conservatism of manufacturers might lead to a shortage in some lines as was the case during the last Summer and Fall seasons. On the other hand conditions, local as well as national, should be studied with some care before large orders are given.

Galvanized Wire—Manufacturers and jobbers have agreed to an all-round reduction of 5c. A good business is anticipated. Prices are now as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8, and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. per 100 lbs. extra charged.

Barb Wire—There has been some enquiry but buyers have held back, thus securing a reduction of 5c. Prices are now steady as follows: $2.75 per 100 lbs. f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—There has not been much business done to date but with a reduction of 5c. this week it is expected that trade will open up nicely. Prices are now as follows: No. 9, $2.70 per 100 lbs. f.o.b. Cleveland, freights equalized with factory points at Hamilton, London, Welland or Windsor and allowance to other points up to 25c.; carlots, $2.65, freight allowance to 20c.

Screen Wire Cloth—The new prices quoted last week are now in effect and a fair business has opened at $1.50 per 100 square feet.

Spring Hinges—A fair business has opened up. Prices quoted for the year are as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Wire and Cut Nails—Buyers have been waiting for the meetings re prices. No change was made. Prices steady with the base price $2.45 per keg f.o.b Toronto.

Screws—No change is reported in this line. A fair business has been done. We quote: Flat head bright, 87 1-2 per cent. discount; round head bright 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Business is quiet and prices unchanged. Our quotations are: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—There are still some United States bolts and nuts offering, but the sale of them is so small that Canadian manufacturers are allowing prices to stand. We quote: Carriage bolts, common ($1 list), 3-16 and 1-4-in., 60 per cent.; 5-16 and 3-8-in., 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—The big advance in cotton cordage is still maintained. A fair business is doing. We quote: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11 1-2c.; single lathyarn, 11c.; double shingleyarn, 11 1-2c.; single shingleyarn, 11c.; sasheord "Hercules," 29 to 30c.; "Star," 36 to 40c.; cotton rope, 3-16-in. and up, 20 1-2 to 22c.; 5-32-in., 25 to 27c.; 1-8-in., 25 to 28c.; cotton twine, 3-ply, 22 to 24c.; 4-ply, 26 to 28c.

Skates—There are still a few orders coming in but stocks are beginning to run pretty low. Prices are steady.

Harness—A particularly good demand for sleighbells and horse robes is reported, at steady prices.

Snow Shovels—A nice trade has been done, a feature being the demand for heavy shovels.

Woodenware—There is practically nothing doing. Prices show no change. We quote per dozen: Washboards, Victor

Canada Iron Furnace Co.

MIDLAND, ONT. Limited

$1.35; Crown, $1.45; Improved Globe, $1.60; Standard Globe, $1.70; Original solid Globe, $2; Superior Solid Back Globe, $2.15; Jubilee, $2.10; Pony, 95c.; Dominion King (glass), $3.10. Tubs, No. 0, $10.50; No. 1, $8.50; No. 2, $7.50; No. 3, $6.50. Pails, No. 1, 2 hoops, $1.75 and $1.90.

Building Paper—Prices have been fixed for the first three months of 1904 at present quotations. We quote the following prices: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c. per roll.

Cement—The cement market is dull this week. We again quote: Canadian Portland at $2.05 to $2.65 Toronto, and $1.65 to $1.90 at the works; American Portland, $2 Toronto.

Firebricks—The market in firebricks is brightening, with good demand at present. Our quotations are: 28 to 33c. for English, and 30 to 35c. for Scotch.

PLUMBING GOODS.

A fair business is doing thought, of course, this is the dull season. Prices are steady throughout except in iron pipe, which is rather easy. Retail plumbers in the city have had an extremely busy season at repair work owing to the severe weather and the freezing of many pipes.

Lead Pipe—There is not much doing. Prices are steady as follows: Lead, 7c.; lead waste pipe, 8c.; discount 35 per cent.

Soil Pipe and Fittings—Trade continues much the same as last week. We quote: Light soil pipe, 45 and 5 per cent.; light soil pipe fittings, 50 and 5 per cent; medium and extra heavy pipe and fittings, 55 and 5 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

Iron Pipe Fittings—Moderate business is reported. We quote the following discounts: Malleable fittings, 15 per cent.; cast iron (not standard), 57 1-2 per cent.; headers, 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; unions, 55 per cent; nipples, 2-in., 65 per cent.; nipples, 2 1-2 to 6-in., inclusive, 60 per cent.

Copper Range Boilers—Trade in copper range boilers is fair; last week's discounts at 15 per cent. continue.

Brass Goods—Business in steamfitters' brass goods is fair with prices steady.

Iron Pipe—The market in iron pipe is quiet this week. We quote f.o.b. Toronto as follows: 1-8-in., $3.25; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55; 2 1-2-in., $19.25; 3-in., $22.75; 3 1-2-in., $28.75; 4-in., $35.25.

METALS.

OPEN HEARTH STEEL

throughout the country to be busy stock taking or taking things easy after the holidays, consequently there is little disposition to buy. Reports re iron and steel in the United States are not encouraging and an easy feeling is reflected here in both pig and bar iron. Tin has been stiffening on outside markets all week except on Tuesday, when a decline set in. Locally prices are 1c. higher. Copper, lead and other ingot metals are firmer outside. Sheet metals are also steady.

Pig Iron—Business is still slow as buyers have not settled down to securing materials since the holiday season. Prices are unchanged with Midland and Hamilton iron nominally $18.50 for No. 1 and $18 for No. 2 at the mills.

Bar Iron—Competition for business is still keen, but there is not as great a disposition to cut prices. Quotations are now as follows: $1.80 f.o.b. Toronto for extras cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft. 20c., over 20 ft. by special agreement according to length and size.

Black Sheets—Prices are unchanged, a fair business doing. We quote: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—Our quotations have been high, so are this week lowered 10c. There is not much doing. We quote: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—A fairly good business has been prompted by the stiff market. An advance of $1 per 100 lbs. is noted on the local market, which change is a result of higher values on the larger markets. We now quote prices at $30.50 to $31.50.

Galvanized Sheets—A fair trade is doing at steady prices. We quote: Queen's Head, $4.25 to $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.25 for 28 gauge; Gordon Crown, $4.25 for 28 gauge.

Tinplates—A better feeling prevails, despite American competition. We quote as follows: Coke plates, bright, 14x20, $3.75; charcoal plates, $4.25.

Copper—Prices in British and U. S. markets are still stiffening. The local market, while considerably stronger, shows no change, prices being as follows: Ingot copper, $14, and sheet copper, $20 per 100 pounds.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—A considerable advance is reported at outside market, but local quotations are steady. We quote: $3.30 per 100 lb. for pig lead and $3.65 for bar lead.

Zinc Spelter—Prices show an upward tendency at primary market, but the local situation is unchanged at 6 to 6 1-2c. per lb.

Zinc Sheets—The market is firm and a fair business doing. We quote: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c., and wiping, 17c.

Old Material—There is practically nothing doing in the market this week. Dealers in these lines like those in many others are waiting patiently till the beginning of the year when they expect business will wake up and be up to the regular level again. Machinery cast scrap is selling lower this week, prices ranging from $13 to $14. Malleable and steel also have dropped $2, bringing the price down to $4. We quote the following: Heavy copper and wire, 10c. per lb.; light copper, 9c. per lb.; heavy red brass, 9 3-4c. per lb.; heavy yellow brass, 8c. per lb.; light brass, 5c. per lb.; lead, 2 1-4c. per lb.; scrap zinc, 3c. per lb.; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast crap, $13 to $14; stoveplate, $10; malleable and steel, $4; old rubbers, 6 1-8c. per lb.; country mixed rags, 50c. per 100 lb.

Seeds.

The seed market is more active with prices as a rule higher for choice seed. The recent severe weather has somewhat checked the supply of seed coming from the farmers. We quote:

Red clover, per bush	5 50	6 00
Alsike "	4 75	5 75
Timothy, per "	1 15	1 50
" flail threshed		1 75

Hides, Skins and Wool.

The market continues dull. The only lines meeting a noticeable demand are lamb and sheepskins, which have risen 5c. This is the only change in prices this week. We quote:

shows an increase of about 30 to 35 per cent. in the hardware trade done.

The year 1903 will be chiefly remembered by the remarkable increase in the manufacture of structural iron in the West and the great extension of the manufacturing capacity. One new company, the Manitoba Iron Works, is purely a growth of the past year, and with their six huge buildings and a moulding capacity of seven tons an hour they are a fine example of western progress. The veteran iron company, the Vulcan Iron Works, have extended their premises by an enormous foundry, which more than doubles their foundry capacity. The Northern Iron Works Co. suffered the entire loss of their plant by fire, erected temporary buildings and managed to fill all contracts undertaken before the fire, and have all plans ready for the erection of very extensive permanent buildings next Spring. The Stewart Machine Co. greatly enlarged their works during the year, but sold out before the close of the year. The new firm will extend the business next year. These mark the greatest changes for the year, and there are numerous smaller ones that all go to mark the progress of western manufactures.

The holding of the Dominion Exhibition here next July, with the interest that will be taken in it by the Canadian Manufacturers' Association, will no doubt tend greatly to further manufacturing developments in the West. In implement manufactures, The Western Implement Co. did not succeed in completing their large new factory, but this will be in operation in the early Spring, and there are other lines of implement making that will be taken up also next Spring.

The year has been one of growth and progress, and the whole outlook for the coming season is satisfactory and encouraging. Prices are unchanged throughout. We quote:

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

Vancouver, B.C., Dec. 31, 1903.

THE year just closing is one which has witnessed great advancement in this province. There is much to look back upon with regret in the way of lost opportunities, but, on the whole, there has been progress of substantial character. The year was marked perhaps by the most insistent series of labor troubles which ever marked its history. The U.B.R.E. strike of employes on the C.P.R. began in February, and it affected other unions to such an extent that the ordinary business of Vancouver and Victoria as well as much interior traffic was seriously hampered. The strikes in the various building trades followed in succession, and even the fishermen were at one time on the verge of a strike, had, in fact, decided on a course which would have amounted to a strike, but which was happily averted. The printers employed in the newspaper offices in Vancouver submitted a new schedule to their employers which was, to have the effect of an ultimatum taking effect on October 1. The publishers left the matter to the last minute and then asked for an arbitration, to which the men agreed, stipulating that the finding of the arbitration shall in no case reduce the scale then in force, and any finding to be retro-active, taking effect on October 1. The decision was reached after the first of December, and it in effect gave the printers their demands, or nearly so.

* * *

Despite labor disturbances, the general trade in mercantile lines in this province this year has been splendid. The business with the north has grown in volume, and the wholesale trade of the coast cities is holding more of it in proportion than in the past.

Local trade, especially in building hardware and lumber, is evidenced by the proud record of Vancouver City, in which $1,350,000 worth of building permits were issued during the year. The lumber trade with the Northwest in the season was very good, the number of cars short in the early part of the year being a drawback, but, on the whole, a big year's trade was done.

In manufacturing lines there has been a noticeable expansion of trade. There are more firms now engaged in machine shops and foundries than ever before in the history of the Coast, yet each is doing a bigger trade than ever. The amouot of larger work in ship repairing and building which has been undertaken in part accounts for the increase.

Mining in the interior has shown a very satisfactory condition on the whole. The figures from the Rossland camp alone show that the mines of the Kootenays have continued to add to the total wealth of the country. The gross tonnage of ore output is given as 377,134 tons for the year 1903, and the value is placed at $1,631,280. The increase in tonnage over last year is roughly estimated at 50,000 tons. During the ten years of the camp's history 1,687,786 tons of ore, valued at $26,816,342, have been produced. A notable feature of progress in Rossland camp was the success of the concentration process installed during the year.

Other Kootenay camps, such as Nelson and the Boundary district show equally good results from the operations of 1903, accurate figures of which, however, are not yet to hand. In every way it can be said the mining interests of British Columbia have shown marked advance.

* * *

One of the most important developments of the year is found in the building of a second railway into Vancouver. The last day of 1903 witnessed the running of the first train over the line from New Westminster right into the city of Vancouver. The first section of the V. W. & Y. Railway is thus complete. By it will be furnished direct connnection, as soon as the traffic bridge across the Fraser river at New Westminster is ready for trains to cross, with the railway systems of the south, and, by them, with Eastern Canada and the United States. The same people who have been active in carrying out this construction, have also, during the year, built a line from Port Guichon, at open tidewater on the Fraser river, to Cloverdale, connecting with the line of the Great Northern running in from the State of Washington and at present terminating on the south bank of the Fraser river opposite New Westminster.

The section of the V. W. & Y. Railway, first mentioned, will, when the bridge is finished, connect with this portion of the Great Northern system direct. In addition to this the same people have now on the ground steel sufficient for 30 miles of rails, and the building of a line from Cloverdale to Huntingdon on the international boundary is to go ahead early in the present season. The engineers are finally locating the line at the present moment. This line to Huntingdon will give direct connection with the N.P.R. and with the B. B. & B. C. railways, and will in all probability form the first section of the V. V. & E., the famous line long promised as a direct means of transportation and communication between the coast and the Kootenay district. It will be under the V. V. & E. charter and name that the Cloverdale-Huntingdon section will be built.

These extensive operations which have been carried on in 1903, have involved the expenditure in purchases and construction of a round million of dollars, all of which has been spent in the coast district. In the coming year the expectation is that the same company will expend a large amount in further extensions. It is an open secret that all the lines being built (each of which has a separate charter) are tributary to the Great Northern Railway system of J. J. Hill, which in its self is a source of satisfaction, for that great Canadian railwayman is not in the habit of undertaking railway projects and putting money into them without making them complete and successful.

The greatest portion of the projects now in hand is the continuance of the V. W. & Y. north from this city through the wealthy and undeveloped interior of British Columbia and on to Dawson, forming an "All-Canadian" route. The general proposition has had much favorable comment, though the Provincial Government has not as yet favored the promoting company with a promise of assistance.

In addition to opening out the interior of the northern portion of British Columbia, the projected line would make it tributary to the cities of the coast, and when the new Canadian transcontinental line, the Grand Trunk Pacific, is built through, the V. W. & Y. would form a connecting link by which ready communication could be had with the section traversed by the G. T. Pacific.

* * *

The talk of oil deposits in this section of the coast district has been roused up once more by the instructions recently issued by a local firm of solicitors to form a development company, which is to take over the claims held by Emil Guenther in North Vancouver, across the harbor from this city. Two New York capitalists are to be on the board of directors, and the company, which is to be limited liability, will put no shares on the market. The capital is furnished for all prospecting, and thorough tests are to be made. Last Spring a representative of the Rockefeller interests spent some time here looking into the proposition, and he received samples of surface collections of oil from the locations in question. These were analysed and gave satisfactory results, so that the present movement may be an outcome of the visit of inspection. The local principals are very reticent in discussing the proposition. They claim to have good authority for the anticipation of a find of paying petroleum.

It is interesting to note that in Steveston, on the north bank of the Fraser river, a company have been operating for some time, boring for gas and oil. The finding of a vein of natural gas occurred a long time ago, and the gas has been burned since that time, though no commercial or economic use has been made of it. The company now exploiting the prospect expects to put it on a business basis, and the expectation is that oil will also be obtained. With these two prospects in close proximity to Vancouver, one on the north and one on the south, success in either would be a great boom to the city.

TRADE CONDITIONS IN NOVA SCOTIA.

Halifax, Jan. 5, 1904.

SO far as sales are concerned business is about at a standstill. Wholesale firms are stocktaking and getting matters in shape generally for the Spring campaign. The province was visited by severe weather for the greater part of the week, the thermometer on one or two occasions registering eight to ten below zero, which is quite unusual in this city. On Sunday a regular old-fashioned snowstorm raged—the worst for 20 years and at the present writing, both city and country are snowed up and business suspended. The storm was so severe that the trans-Atlantic steamers due to sail on Sunday did not leave port until the following day.

* * *

Hitherto all the wholesale hardware firms in this city have also conducted retail departments in connection with their business. Commencing with the first of the year two of the leading firms will abandon the retail branch and devote their entire attention to the wholesale business. The firms are William Robertson & Son and W. B. Arthur & Co. In making the announcement of the change the former state that the wholesale business has so increased of late years that this change was rendered necessary, and that in the future the firm will devote their entire energies to a strictly jobbing trade. W. B. Arthur & Co., on account of the growth of the wholesale branch, announce that they have cut out the retail department and will devote their attention solely to their wholesale customers. The firm, however, will still conduct their bicycle department on Bedford Row and will devote more attention than before to the sale of Singer sewing machines and Baum safes in a jobbing way. The new building erected for A. M. Bell & Co. on Granville street is a magnificent structure and is a decided addition to the appearance of our wholesale district. It is not yet ready for occupation, but will be taken possession of by the firm during the present month.

* * *

Graham Fraser assumed the active management of the works of The Dominion Iron and Steel Co. at Sydney on Saturday, and his first act was to close down the open-hearth and blooming mills. It is expected that other departments will also be closed temporarily. No effort will be made to increase the output while the market is in its present condition, and all the work that will be done will be to fill such orders as are booked or may be received from time to time. The men were not discharged but have been put to work on the construction of the finishing mills, etc.

* * *

The collector of customs at St. John has placed an officer in charge of five carloads of stoves, etc., shipped by The McClary Mfg. Co., of Ontario. To avoid the Winter freight rates on Canadian railways the company sent the goods to Boston and thence by water to St. John. The boats being American instead of Canadian abrogated the bonding privilege and, it is claimed, rendered the goods liable to duty on re-entry in Canada. The matter has been referred to the authorities at Ottawa.

The Robb Engineering Co. have lately introduced a new type of engine which they call the "Robb-Armstrong Corliss," the construction of the valves being based on the original Corliss plan with a very ingenious valve gear invented by Mr. E. J. Armstrong. This gear is simple in construction, having only half the number of parts of the original Corliss, and being especially adapted for high speed work. The Robb Engineering Co. have 25 of these engines now under construction, five of them being for the Montreal shops of the Canadian Pacific Railway, and two for the same company at Fort William.

THE C. I. F. DECISION.

JUDGMENT was given at noon on December 31st, in the c.i.f. case, by Justice Trenholme in favor of the plaintiffs, the Canada Hardware Company. Unfortunately up to time of going to press we have been unable to obtain a copy of the decision, but the following is a summary of his Honor's remarks in giving judgment.

His Honor briefly recalled the circumstances of the case which are known to our readers. Mr. Gerald Lomer, manufacturers' agent, of Montreal, representing Suren, Hartmann & Co., of London, England, made a contract of sale with the Canada Hardware Company of a quantity of metallic goods, mostly annealed hay wire unvarnished. The contract was what is known as a c.i.f. contract Montreal, and the purchaser paid over a lump sum to cover the cost, the insurance, and the freight to Montreal. The contract did not bind the vendor to deliver. His obligation was merely to insure the goods properly. If damage was done the purchaser could then look to the insurance company for restitution. The whole question at issue is: In the absence of any special instructions what kind of insurance was the vendor bound to effect? Plainly this is a question of law unless there is a well established custom to override the law. This custom might either be a custom generally recognized by the trade or a custom established between the parties by previous contracts.

The insurance effected in this case was that known as f.p.a. This insurance provides only against total loss as no damages are paid unless the injury is incurred by the stranding, sinking, burning or collision of the ship. The cost of this insurance was shown to be one-third the cost of complete insurance against both total and partial loss. In the case in question the goods were injured by rust and as the loss was only partial the insurance company were not liable.

The evidence adduced failed to show any general usage among the trade not to insure such goods against all the perils of the sea. Neither had any usage been established by previous dealings between the parties. There had been no previous loss and the goods in the earlier contracts had been of a different nature upon which f.p.a. insurance might have been satisfactory. The purchaser did not know or acquiesce. Therefore the whole question was, "What was the law"?

By operation of law all the ordinary perils of the sea whether resulting in partial or total loss are covered by insurance. It would be a strange thing not to protect against the most usual kind of loss. Partial loss is more frequent than total loss. The plaintiff was entitled to full insurance by the terms of his contract. It would be hard to find a case more exactly in point that that quoted by counsel for the plaintiff.

His Honor then discussed the amount of the damages to be paid. Judgment was given without question for two items, but Suren, Hartmann & Co. will be held responsible for the third item only in case the party to whom the Canada Hradware Company sold part of the shipment and received payment before arrival of goods in Montreal make good their claim for damages. There was evidently some doubt as to their technical right to claim damages at this late date. This item is dismissed unless the purchaser has legal recourse against the plaintiffs in this action, in which case the defendants will be held responsible.

PERSONAL MENTION.

Mr. Walter Grose, manufacturers' agent, of Montreal, is in Hamilton this week consulting with his principals.

Mr. F. O. Lewis, of Lewis Bros. & Co., Montreal, was in Toronto early in the week attending a meeting of the Executive of the Canadian Wholesale Hardware Association.

Mr. J. R. Terrill, one of the most energetic and popular of the "knights of the grip" in the service of Caverhill, Learmont & Co., of Montreal, has been given leave of absence owing to ill health. He is taking a rest in the Laurentians. "Hardware and Metal" wishes him a speedy return to his accustomed health.

MONEY TIGHTNESS IN CANADA.

By D. M. Stewart.

THE year just closed has been, without exception, the most prosperous the banks of Canada have ever had, and that should certainly mean Canada has had the most prosperous year in its history. Existing conditions indicate that the present marked prosperity should continue throughout 1904.

Some idea of the good business done by the banks may be gathered from the fact that the assets of all banks have increased from $625,000,000 at the end of 1902, to $660,000,000 at the present time, an increase of $35,000,000. The most noticeable change in the business done during the year was the largely increased amount that the banks of the Dominion have placed out on commercial loans.

From $324,000,000 at the end of 1902, these loans have increased to $382,000,000, making an increase of $58,000,000 for the year, which means an increase of nearly $5,000 a month.

Then, again, the bank note circulation has reached a new high level, at $70,480,000.

While money, as has been claimed, is fairly tight at the present time, the reasons for it indicate that the condition will last but a short time longer.

The three principal reasons are as follows :

The lateness in the crop movement ; the quietness that has recently prevailed in the cheese market in England, which has resulted in there being at present between three and five million dollars worth of cheese in the city, and the fact that a number of capitalists purchased stocks at higher prices than are prevailing at present, and are waiting till higher prices can be secured.

A month or two should see an improvement in the cheese market in England, and the stock market here, and this should tend to make money much easier than it is at present.

EXPRESSED THEIR GOOD WILL.

ON New Year's eve the travelling staff of Lewis Bros. & Co., Montreal and Toronto, presented Job W. Taylor and Theodore Korb with gold watch charms, containing inscriptions commemorative of the event, which marked the resignation of Messrs. Taylor and Korb from the staff of Lewis Bros. & Co. Complimentary addresses were also read.

Mr. Taylor, who for many years represented Lewis Bros. & Co., has accepted the Canadian agency of the Pittsburg Steel Co., with headquarters in Montreal.

Mr. Korb, who joined the Lewis Bros. staff to compile the thousand-page catalogue recently issued by that firm, leaves to manage the advertising bureau of the Belknap Hardware and Manufacturing Co., Louisville, O. Many of the trade will unite with the staff of Lewis Bros. & Co. in extending good wishes to Messrs. Taylor and Korb.

RETAILERS OF THE FUTURE.

LEAVING out of the question the effect on the man now in the trade, it must be conceded that the changes constantly going on in retailing mean better merchants, says an exchange. Necessity is the mother of invention. The smaller the margin the greater the necessity of inventing methods which save and make money. Even the ordinary student of trade conditions can see that the future has in store developments which are to greatly change the conditions of retailing and the character of the retailer. The centralization of the manufacturing industries of the country is going steadily forward, and the methods of marketing the goods means far less profit to the retailer than under the old plan. Under the old methods some merchants made money, others did not, and a large number failed. It depends upon the man mostly. It depends upon his resources sometimes. Under the old method a sleepy merchant, twenty years ago, frequently made a fortune. The future will have no such opportunity for sleepy merchants. But there will be plenty of opportunity for the right man. To go further than this the future will develop the right men. The young man of energy and ideas need not hesitate when opportunity beckons him toward the store. His will not be known as the golden age of retailing, but it will be known as the age of ideas. —Iron and Machinery World.

TOO MUCH STOCK.

Surplus stock is the merchant's curse.

His ideas of a surplus are too often far beyond him.

Daily urged to buy enough goods to supply his trade he makes doubly sure by buying twice as much as he needs.

He waits until the annual inventory to find what he has on hand.

There is a time which taken at its flood sweeps some of these mistakes out of the way.

That time is now.

People are buying. How are you meeting the opportunity?

Can you see the other end of the story or are you wading in the mire of too much stock and no turn in the road?

What departments of your business are carrying too big a load?

Never looked it up, eh?

Now frame a new resolution and hang it over your desk:

Be it resolved that you will immediately investigate and keep on investigating. That you will not rest till the decks are properly cleared for action.

The trouble with hundreds of merchants is they are too much working men and too little on the thinking order.

If they would put in half the time on clean cut thought about their business, they could well afford to pay some man to do part of the work they are doing.

Buy and sell is not the whole story. Neither is collecting the subject of the last chapter.

Loss on goods carried over, loss of discounts, loss in interest paid are important items.

Are you guarding against those losses right now?—The Hardware Trade.

AUTOS FOR TRAVELLERS.

Editor " Hardware and Metal ":

Who will be the first business man to bring automobiles into use by travellers visiting the smaller towns, especially where railway service is lacking or entirely inadequate or neglectful, where tme-tables are arranged to suit the manager's convenience, not that of the public?

This may still be premature, but it is bound to come. Travellers will condense their samples and make about three towns a day where now they make but one on some of the railways. They will not need to wait for trains or livery rigs but can move on as soon as they are through in a town. The machines would pay for themselves in a short time out of what it now costs to feed and stable a team, to say nothing of the livery bills and railway fares to be saved. There is no reason why these machines cannot be perfected to overcome a lot of the difficulties experienced in the early stages of manufacturing, which made the automobile a doubtful proposition for the road. There is now no question as to its practical utility for the purpose.

Y. Z. L.

Toronto, December 24, 1903.

SOLD THEIR PADLOCK BUSINESS.

Wm. Wilcox Mfg. Co., of Middletown, Conn., have sold their entire padlock and French rim dead lock business, including tools, balance of stock, good will, etc., to S. R. Slaymaker, manufacturer of padlocks, night latches and hardware specialties, Lancaster, Pa., for whom John H. Graham & Co., 113 Chambers street, New York, with offices at San Francisco, Cal., London, England, and Copenhagen, Denmark, are general sales agents.

GLASS FIRM ENLARGING.

The Toronto Plate Glass Importing Co., 135-143 Victoria street, Toronto, have put another storey to their present three-storey building. Latterly they have not been able to carry a large enough stock to supply the ever-increasing demand. They will now have about 35,000 square feet of flooring and will be able to give their customers better satisfaction than ever before.

Now for 1904!

We are ready with a more complete and larger plant than ever. Everything points to 1904 being the greatest in the history of our business. We know we will make and sell more

Imperial Oxford Ranges

and

Oxford Hot Water Heaters

than in any previous year. This will be because more people will know of them and to know of them is to want them. Don't you want to be with us in our greatest year? Write us about it.

The Gurney Foundry Company, Limited.

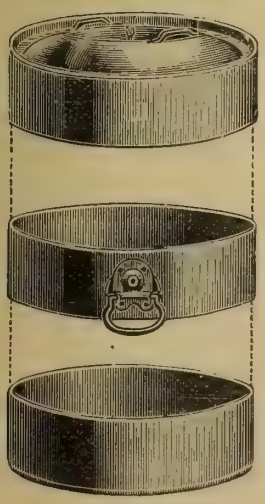
Toronto Winnipeg Vancouver

The Gurney-Massey Company, Limited,

Montreal.

ESTABLISHED 1860. INCORPORATED 1895.

DAVIDSON'S MILK CAN TRIMMINGS FOR 1904.

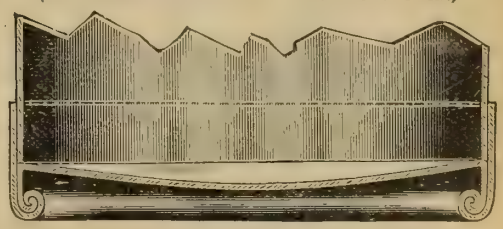


BROAD HOOP PATTERN.

This demonstrates the popularity of

Davidson's Patent Milk Can Bottoms

(See how the Outer Rim and Inner are rolled in.)



SECTION OF BOTTOM.

You should buy our Milk Cans and Trimmings, because: our Broad Hoop Bottom has all the advantages of a seamless bottom without the strain that spinning entails. The rim is turned in with edge of bottom, giving double durability and heavy rolled edges that will not tear factory floors nor waggons.

They have no air spaces (which make soldering difficult) but sufficient space is left between bottom proper and rim to allow body of can to be inserted ¼ of an inch, making permanent joint.

Bottoms are thus sweated in with half the solder.

Bottoms are concave, draining to the centre, therefore are easier to wash out.

They will not corrode like those which drain to the side. They have flush side handles.

Top bands are "SHOULDERED" and have cut out at joint, making neater and cleaner job in half time than with old style hoop.

Bottoms are rivetted to bottom hoop, as well as being rolled together.

All bands have retinned edges.

For durability, finish and economy in making up, our Trimmings are unequalled.

The THOS. DAVIDSON MFG. CO., Limited, MONTREAL

UNDER THE WINDING UP ACT.

Important Sale by Tender of Real Estate, Plant, Machinery and Supplies of the NORTHROP IRON WORKS, Valleyfield, Insolvent Company.

Under authority granted by the Court, the liquidator of the above estate asks for tenders at a rate on the dollar on the inventoried value of the following property:

(1)—Plant, machinery, tools, jigs, patterns, supplies, work in process, inventoried at $61,070.47.

(2)—Real estate described as follows: "A tract of land in the Town of Salaberry de Valleyfield, forming part of the lot known on the Official Plan and Book of Reference of the Parish of Ste. Cecile as number ninety, containing eighty-four thousand feet in superfices, more or less, and bounded as follows, starting from a point on the south fence of the Canada Atlantic Railway Company's right of way, which point is in direct continuation of the east side of Maden street, as shown on said Official Plan, if the said east side street be continued north, so as to intersect the Canada Atlantic Railway Company's right of way, as it is also shown on said Official Plan, from this said point two hundred and fifty feet, south on the said line being a continuation of the east side of Maden Street, thence four hundred and twenty feet east on a line parallel to a street called The Avenue, and thence one hundred and fifty feet north, this line being parallel with the line first drawn as aforesaid, making a strip of land bounded on the north by the Canada Atlantic Railway right of way, in which line it measured four hundred and forty feet west, south and east by the lines just described, with all the buildings thereon erected."

The plant, tools and machinery are all modern and of approved designs. The real estate situated at Valleyfield, in the Province of Quebec, offers the greatest possible facilities for manufacturing operations.

Details of the property, together with inventories and all other information required, can be had at the office of the liquidator. Tenders will be received up to 30th day of January, 1904, addressed to the liquidator, and marked "Tenders Northrop Iron Works." The highest, or any tender, not necessarily accepted.

STANLEY H. McDOWELL,
Liquidator,
15 St. Helen St., Montreal.

STOVES AND TINWARE.

Sheet Zinc for Roofing.

WILL zinc roofing become popular? Is it of such value that the success of the attempt to introduce it will be ensured? In reply to inquiries made by The Metal Worker several interesting opinions have been received.

The general manager of The Matthiessen & Hegeler Zinc Co., La Salle, Ill., writes as follows; Zinc is extensively used for roofing purposes in several European countries, and there is no reason why it should not be used advantageously for the same purpose here, provided sufficient allowance is made for expansion and contraction of the metal by reason of the changes in temperature, which are more severe here, the South excepted, than in Central Europe. In Europe zinc roofing is considered a special trade which is carried on by mechanics skilled in the art of working sheet zinc into all kinds of ornaments as well as roofing. At the time the writer was living in Europe zinc roofs were guaranteed to last for 40 years without repairs. When zinc is used in the shape of tiles it is more easily applied than in larger sheets, and it can be laid on in the same way as other metallic tiles. Two zinc tile roofs in this vicinity are giving complete satisfaction.

The Lanyon Zinc Co., St. Louis, Mo., say: We are glad that you have brought up the subject of zinc for roofing purposes, because it is one that is really entitled to consideration. The interest now being evinced by architects and builders in sheet zinc for roofing purposes shows that the experience of the European people during the past 25 or 30 years is sufficient to insure good results if the subject is taken up thoughtfully by our people. So far as we can learn, the climatic differences here are such as require more technical attention to the method of attaching the various sections of the roof or ornaments, but as soon as these points are carefully worked out there is no doubt about the ultimate use of zinc for these purposes. We have been surprised to note the increase in the inquiries and purchase of sheet zinc for roofing. This demand has been growing steadily and has reached a substantial quantity. However, it is still but a fraction of the amount used yearly in Europe.

W. H. Mullins, of Salem, Ohio, a well known manufacturer of architectural sheet metal work, writes: I am sorry that I cannot give you any practical or accurate information in regard to sheet zinc roofing in this country. We have sold quite an amount of our stamped zinc tile roofing, but not enough of it to justify the claim that it is in general use. Zinc, as you are probably aware, is largely used in Europe for roofing purposes. In Germany 40 per cent. of the total product of sheet zinc is so used. There a roof is made of heavy zinc, sheets never lighter than No. 12 gauge being used and Nos. 14 and 16 gauge being preferred. Where this heavy gauge of zinc is used the zinc, in oxidizing, forms its own coating and is protected from the action of the weather. It is claimed that a roof made of No. 14 gauge zinc will last for 40 or 50 years. Where zinc has been employed for roofing in this country I think the mistake has been made of using zinc of gauges that are too light for the purpose, so that when oxidation takes place it has not enough body of metal to work on and the sheet is very soon eaten through. We have furnished a number of ornamental roofs in zinc, notably a roof for the large office building of The Illinois Zinc Co. at Peru, Ill., and for the residence of Mr. Matthiessen, of the firm of Matthiessen & Hegeler, at La Salle, Ill. I have often thought that if the matter was properly exploited in this country a much larger quantity of zinc would be used for roofing purposes.

Grand River Metal Works.

The Grand River which supplies many of the industrial establishments of Galt, Ont., with power, also supplied a growing industry of the town, the Grand River Metal Works, with a name. This firm make specialties formerly imported. Among their lines are bolts, iron brackets, "Blizzard" snow shovels, carpet stretchers, etc. They have already "caught on" in an excellent way. Mr. Handcock, treasurer of the company, informed a representative of "Hardware and Metal" that through their advertisement in this paper they received several big orders, so that their works are now kept busy supplying the market.

The Mountain View Ranching Co., Stratford, Ont., have been incorporated with a capital of $50,000, to carry on the business of farming, ranching and stock-raising in all its branches. The directors are E. Walton, St. Albans, U.S.A.; J. A. Davidson, John Brown, and Henry Walton, all of Stratford; and C. R. Moore, of Toronto.

FOR SALE.

Sale of stock of hardware and shop supplies by tender The extensive and old-established business of J. HENDERSON in Town of Collingwood. Owner retiring.

Collingwood is one of the most flourishing and progressive Towns in Canada and has brightest outlook for the future. It has largest and most up-to-date dry dock and shipbuilding plant on the Upper Lakes where largest vessels are built and repaired. It has also large saw mills, export meat-packing plant, flour mill, grain elevator, planing mills, tannery, foundry, etc., which give employment to a large number of hands. It has also near completion large steel manufacturing plant and rolling mills, wire mills, nail factory and furniture factory. It is headquarters of large line of steamboats which give it connection with all points on the lakes. Harbor is now crowded with steamboats which will fit out there in Spring. It is a terminal of Grand Trunk Railway and also an objective point of railways now under construction and projected. Written tenders for above stock will be received up to the 15th day of January, 1904 by the undersigned, from whom conditions and terms of tender and other information can be obtained on application.

PAINT, OIL AND BRUSH TRADES

A New Method of Making Art Glass.

A LONDON manufacturer of art glass proposes to establish a factory at Aurora, Ill. He describes the process as follows: The figures or designs are first made, then are placed between two pieces of plate glass. A high-class artist is employed. He is given the idea of the design wanted and then traces the same on a piece of transparent paper. This paper is laid upon a piece of plate glass the desired size. The tracings are then followed by a flexible brass rule, which is placed on the outlines traced. After the brass strips have been put into place, small beads the size of a pin head and crushed glass of the desired shade are placed inside of the brass strips. After all of the beads and plate glass have been put into position the entire design is covered with what is known as a water glass, which acts the same as glue. The design is then covered over with another plate glass and firmly secured and is ready for the market.

It is claimed for the work that it will out-last the art glass, made in this country, and according to the designs displayed the work is far more artistic than that seen in churches and other places where art glass is made. The manufacturers claim for their product, that it can be manufactured for just half of the cost of art glass and thus far in England the new work is being used extensively in all of the modern buildings and churches.—Review.

The 1904 Linseed Oil Outlook.

IN July and August of 1901 raw linseed oil in carload lots sold at Chicago at 80 cents per gallon. Since that time the tendency of the market has been generally downward, until the Chicago quotation is now 33 cents. This is the lowest December quotation for oil since December, 1896, when the market touched bottom at 27 cents. In the two following years the lowest December quotation was 35 cents, but in the four years since that time, 1899-1902 inclusive, the close of each year has seen much higher prices for oil, ranging from 43 to 58 cents.

The usual tendency of the linseed oil market, following the first of each calendar year, has been to advance. The year 1903 was an exception, the January price being 44 cents, while subsequent months developed lower prices. But in 1902 the year opened at 55 cents and went to 64 cents in July; in 1901 January opened at 53 cents and there was a steady advance to 80 cents in July; in 1900 the opening was at 51 cents and the July price 65 cents. Some of the years previous to 1900 show a weakening market from January to July, but in the majority of instances there has been an advance or a firm market during the first six months of the calendar year. Lower prices usually have come after the appearance of the

Taking the average of past years in respect to the course of prices, and considering all other circumstances, it appears probable that linseed oil will not sell much lower, if any, after January 1st than it is now selling. True, there is a large amount of flaxseed in public and private store, but it is held, for the most part, in strong hands. Much of it is owned by crushers and they are in no mood to sell their oil at prices below real value as predicted on the cost of their seed. Besides, they anticipate a brisk demand for oil after January 1st, due to the fact that only a small amount of oil as compared with past years has been placed under contract. While we do not wish to be understood as predicting higher prices for oil for the first half of 1904, we think the situation is favorable to firm or advancing markets.—Paint, Oil and Drug Review.

Paint and Oil Markets.

MONTREAL.

Trade this week is considered fair for the season of the year and the general outlook is promising. Linseed oil and turpentine have been slightly advanced. Other prices are unchanged. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.ob. Montreal. Terms, four months, or 3 per cent. off for cash in 30 days.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Red Leads.—Genuine red lead, in casks, $4.25; in 100-lb. kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge.—Ground, casks, 5c.; in less quantities, 5 1-2c.; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47c.; 5 to 9 barrels, 46c.; boiled, 1 to 4 barrels, 50c.; 5 to 9 barrels, 49c. Delivered in Ontario between Montreal and Oshawa at 2c. per gallon advance.

Turpentine—Single barrels, 85 1-2c.; 2 to 4 barrles, 84 1-2c. Standard gallon of 8.6 pounds.

Benzine.—25 to 26c.

Shellac Varnish.—Pure white, $2.60 to $2.80; pure orange, $2.60 to $2.80; No. 1 orange shellac, $2.40 to $2.60.

Mixed Paints.—$1.20 to $1.40 per gallon.

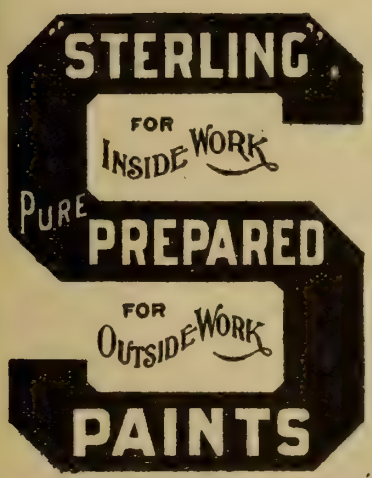
AGENTS FOR ASPINALL'S ENAMEL.

JANUARY—DECEMBER, 1904



This year is fraught with many possibilities for the hardware dealer. It will end right or wrong, according to his choices.

In the matter of Prepared Paints he must choose some brand, and the one to choose is that which will advertise him best and longest.

STERLING PAINTS

are by all tests the best. The paint itself says so. Write us and we'll tell you more about it.

THE STERLING PAINT PEOPLE

(GRANT-HAMILTON OIL CO., LIMITED)

Toronto Montreal Winnipeg

Castor Oil.—8 3-4 to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

English Paris Green.—50 and 100 lb. drums, 15c. per lb.; 25 lb. drums, 15 1-2c; 1-lb. paper boxes, 16c.; 1-lb. tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

TORONTO.

There is little business and prices are without change throughout. In fact little interest is being taken in the market though some business for future delivery is noted. We quote:

White Lead—Ex-Toronto, pure white lead, $4.75; No. 1, $4.30; No. 2, $4; No. 3, $3.60; No. 4, $3.35 in packages of 25 lb. and upwards; 1-2c. per lb. extra will be charged for 12,1-2-lb. packages; genuine dry white lead, in casks, $4.87 1-2.

Red Lead—Genuine, in casks of 560 lb., $4.25 to $4.50; ditto, in kegs of 100 lb., $4.75; No. 1, in casks of 560 lb., $4; ditto, in kegs of 100 lb., $4.25.

Litharge—Genuine, 6 to 6 1-2c.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c. per gallon.

Paris White—90c. to $1 per 100 lb.

Whiting—60 to 65c. per 100 lb.; Gilders' whiting, 75 to 80c.

Shellac—Pure orange, in, barrels $2.45; white, $2.60 per gallon; No. 1, 15c. less; in less quantities 30c. extra, including price of can.

Pumice Stone—Powdered, $2.50 per cwt. in bbls., and 4 to 5c. per lb. in less quantity; lump, 10c. in smal lots and 8c. in bbls.

Linseed Oil—Raw, 1 to 2 bbls., 50c.; boiled, 53c.; 3 to 5 bbls., raw, 49c.; boiled, 52c.; 6 to 9 bbls., raw, 48c.; boiled, 51c., delivered. To Toronto, Hamitlon and London, 2c. less.

Turpentine—Single bbls., 86c.; 2 to 4 bbls., 85c., delivered; 5 bbls. and over, open. Toronto, Hamilton and London, 2c. less. For less quantites than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

Glues—Broken sheet, in 200-lb. bbls., 8 to 8 1-2c. per lb.; cabinet glue, in bbls., 11 1-2 to 12c.; emery glue, in bbls., 17c.; bookbinders', ground, 10 1-2c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

Putty—Common, $1.65; pure bladders in barrels, $2.25; bladders, in 100-lb. kegs, $2.40; bulk, in barrels, $2.05; bulk, less than barrels and up to 100 lb., $2.95.

Plaster Paris—New Brunswick, $2 per bbl.

Liquid Paints—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

Barn Paints—65 to 70c. per gallon.

Castor Oil—English, in cases, 7 1-2 to 8c. per pound, and 8 1-2 to 9c. for single tins.

English Paris Green—Petroleum bbls., 14 1-4c.; arsenic kegs, 14 1-2c.; 50 to 100-lb. drums, 15c.; 1-lb. packages, 16c.; 1-lb. tins, 17c.; 1-2-lb. packages, 1-2-lb. tins, 19c.

Canadian Paris Green (present delivery)—Petroleum bbls., 12 1-4c.; arsenic kegs, 12 1-2c.; 50 and 100-lb. drums, 13c; 1-lb. packages, 14c.; 1-lb. tins, 15c.; 1-2-lb. packages, 16c.

ST. JOHN

Burning oil is always a large business at this season. The present prices are much above the average. People must have oil, and as there is no competition between American and Canadian oils, they have to pay the price. Values are very firm. Lubricating oils begin to have more attention; the market is firm. Paint oils also have more attention. Linseeds are very low. Turpentine is unchanged at the high price. Fish oils are scarce and high.

WINDOW GLASS.

MONTREAL.

Prices are being fairly well maintained at the present low figures. We again quote as follows: First break, 50 feet, $1.70; second brake, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

Some cutting is being done. A fair business is reported. We quote prices nominally as follows: Star, under 26 in., $3.10; 26 to 40 in., $3.30; 41 to 50 in., $3.70; 51 to 60 in., $4; 61 to 70 in., $5; 71 to 80 in., $4.30 net, Toronto, Hamilton and London.

RETAILER CHARGED WITH FRAUD

At the instance of the creditors Edward Basken, general storekeeper of Sault Ste. Marie, has been arrested on the charge of fraud. Basken recently assigned to Osler Wade of Toronto, and at a meeting of the inspectors it was decided to make an investigation into his methods of doing business. It was stated that last September Basken issued a statement showing a surplus of $6,000, whereas when the failure occurred the liabilities were found to be about $30,000, with assets of only $7,000. Mr. A. C. McMaster, of Macdonell, McMaster & Geary, representing about 40 of the creditors, was sent to Sudbury, North Bay, and the Soo, Basken having had stores at the three points, to investigate, and the arrest followed.

BEGIN THE NEW YEAR

by stocking the best liquid paint on the market.

"ANCHOR" LIQUID PAINT has no equal. The White Lead used in its manufacture is BRANDRAM'S B. B. GENUINE—the world's standard . . .

CHURCH'S COLD WATER

ALABASTINE

is already half sold when a dealer puts it in stock because of our GENEROUS ADVERTISING in public papers. It is not a kalsomine, but a permanant coating that hardens with age, a claim that cannot be truthfully made of any other wall-coating. The patented feature READY FOR USE BY MIXING IN COLD WATER is a great advantage to the busy workman. He appreciates it, and to sell anything else it must be recommended as "the same thing," or "just as good." No dealer can afford to make such representation. The public knows Alabastine, and little or nothing about the just-as-goods. There is no loss in selling Alabastine it is put up in moisture proof packages, and in the most popular shades.

We shall help to sell Alabastine in the future, just as we have for more than twenty years past. Order early either through jobber, or of

MINING AND SHIPPING NEWS

HARDWARE AND METAL desires to furnish its readers with reliable mining and shipping news, and would welcome each from any authentic source.

A modern bankhead is to be installed at Sydney Mine No. 1, Sydney Mines, N.S.

The Algoma Navigation Co. are figuring on a project to put on two new steamers to trade between Owen Sound, Manitoulin Island and North Shore points.

The steam vessel which The Calvin Co. are building at Garden Island, Ont., is a paddle-wheel brig, 130 feet keel, 20 feet beam and 9 feet depth of hold. She is for raft towing and for running the St. Lawrence rapids.

The Nova Scotia Steel Co. have secured several options on iron deposits in Cuba, and have sent an expert to examine them and report. The iron would be valuable for mixing with the iron ore they now use.

Graham Fraser has assumed active management of the works of The Dominion Iron & Steel Co. Having inspected every department of the plant he has closed down the open-hearth and blooming mills for two weeks. No effort will be made to increase the output with the market in its present condition.

The Northern Light, Mining and Development Co., Port Arthur, Ont., have been incorporated with a capital of $1,000,000, to carry on the operations of a mining, milling, reduction and development company. The directors are J. Gonska, J. H. Hill, N. Mueller, J. J. Durage, all of Duluth, U.S.A.; and C. Larson, Superior, U.S.A.

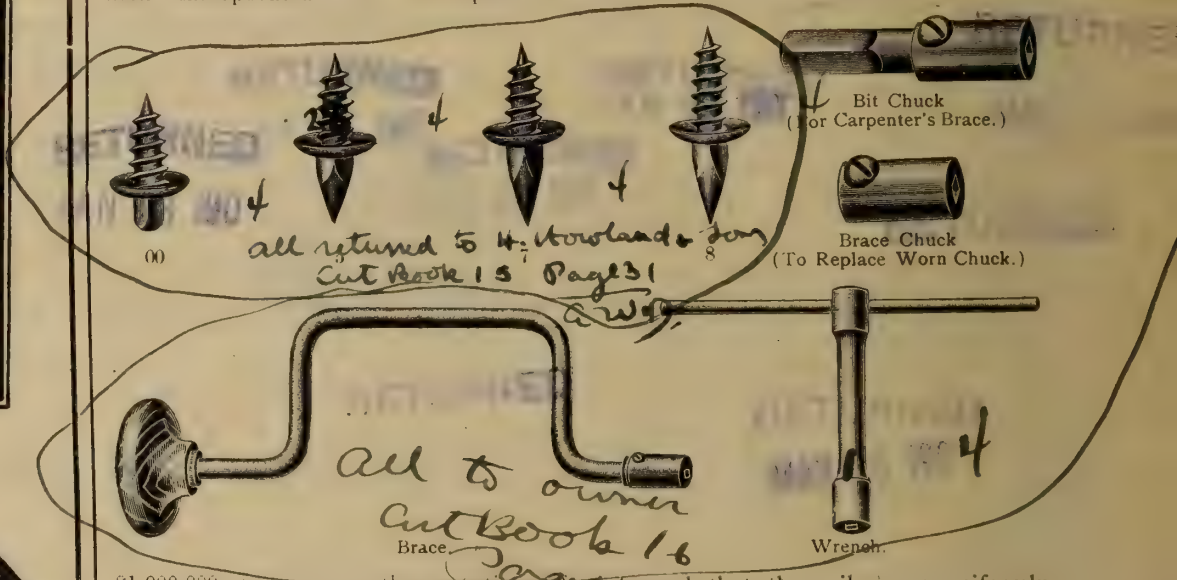
Political quarrels have been started in Montreal relative to the proposed spending of between $2,000,000 and $3,000,000 on steel sheds at the wharves. This is quite in line with past history in Montreal, and will result in the lengthy postponement, if not the abandonment, of the project for completing the improvement scheme that has been in progress for the past six years.—Marine Review.

The Dominion Coal Co. will increase their output. President James Ross gave out the following statement last week: "Now that the coal company has taken over the management of their own affairs I might say that the chief feature of the policy of the company will be to increase the output as rapidly as possible. Our output has now reached all but 15,000 tons a day, while last Thursday out of No. 2 Dominion mine 1,900 tons were taken."

John F. Stairs speaks hopefully of The Nova Scotia Coal & Steel Co. He says: "The company are now experiencing the most prosperous year in their history, and the steadily increasing output of coal puts the company in a better position to-day than it has ever been in the past. In addition to the old collieries taken over from the General Mining Association, two new collieries have been opened up during the past year, and the output from these new collieries has already reached 200,000 tons, and they are not yet fully developed. The output of ingots and finished steel is also considerably larger than in any previous year."

THE LIPSCOMB DISC SCREW CALK

The Lipscomb disc screw calk, which was first placed on the market last year by The Canada Screw Co., Hamilton, has proved so popular that the manufacturers are introducing two new sizes for this Season's trade, and have re-numbered the entire set. Experience has shown where several important improvements could be made over last year's calk, and we are informed that the spikes are uniformly hardened, and that the formation of the disc has been so altered as to greatly strengthen it. The spike shape has been improved, and the calks can be turned in easily. The chucks of the different tools are now made very hard and of better material than those sent out last year. We illustrate the different sizes of calks on this page. The manufacturers state that size No. 00 is intended mainly for an ice calk. No. 5 is the standard logger's calk for most sections. The goods are marketed through the jobbing trade.



Window and Interior Displays

Timely Hints and Suggestions.

The Hardware Window.

IT is a lementable fact, but nevertheless true, that the hardware merchant is the most backward as a class, in the attractive decoration of his windows. The dry goods store has for years felt its very existence dependent upon the interest it could create through the window display; the grocer is rapidly showing that he has reached the conclusion that his window space can be used as a valuable advertisement; the bookseller and dealer in fancy goods has been long aware from the very nature of his business that the volume of his business varied directly with the efforts he made to draw the attention of the public to the wares and novelties he was handling; and the men's furnisher and millinery establishments are devoting more time on the arrangement of their window than on any other part of their business. But the hardwaremen in some centres, seem to have become infused with very few of the progressive ideas that have so strongly influenced the decorative plans of the other merchants.

Why they have remained stationery is not difficult to understand, but the reasonableness of such a backwardness is impossible to defend. The causes of it may be looked for in the nature of the goods handled, which from their unattractiveness in themselves, convey the impression to the merchant that they cannot be tastily shown, and also in the fact that almost everything in the hardware stock is a staple, a thing which a man must buy if he needs it, but will have no interest in as long as he does not actually require it.

This slowness in grasping the idea of modern business methods does not, of course, extend to all hardware merchants, and in this article it is only those who are careless of their display and the number of whom is much too large, who are criticized. They consider that if a man wants a hammer or a screw or a coal scuttle or a whetstone he knows he must go to the hardware store to get it, and no amount of display will sell any one of them to him unless he does need it. But the fact is lost sight of, that the window that prompts his memory, that reminds him of his requirements, belongs to the store that is going to sell him the article. A man in need of the most staple article will in many cases buy it where he sees it. The carefully dressed hardware window, whether it shows the article or not, will remind him of his needs, and the window that in no way attracts his attention will be passed by.

But it is not the staples which should occupy the most prominent positions in the window, and this is one of the points that every window dresser should remember. Such things as nails, hammers, screws, chains, etc., will receive only small benefit from a window space, as everyone knows such things are carried in sufficient variety in all hardware stores. But this is only a small part of the stock, the greater part admitting of not only good arrangements, but of profitable advertising through the window display. Knives, skates, scissors, razors, guns, silverware, clocks, lamps, heaters of various kinds, carpenters' tools and a great list of other articles are lines which can very often be sold entirely from the display and will create a demand that may not have been pressingly felt by the customer. Any of them may be done without for months, but at the same time the possession of them may fill a want.

Expensive But Profitable.

YES, no one will deny that the merchant who arranges good window displays is undergoing some expense which he who is careless of the appearance of his store front does not encounter. The unprogressive merchant who offers this objection to the show window considers that, as the expense cannot be denied, his argument closes the question.

He may believe in advertising in the local paper, although it is safe to say that if he does not eblieve in dressing his window he is out of accord with all the modern business building methods. But if he does advertise, the expense objection is discovered to be of no weight for advertising costs more than the average window-dressing, and the results are less evident. If he does not advertise let us ask him if he allows his name and business to appear on the front of his store. If so, why? He will say in order that people may see who and what he is. Well, if the public will bother to look at his name and business, things in which there is no active interest, it is certain that they will observe his show window if it is well trimmed. And if they observe and admire the merchant is sure to profit from that.

Should any man, merchant or not, feel sure that, from an investment of a sum of money, he will reap a profit, he would not hesitate to make the investment. He has the expense of laying out the money at first, but he is looking forward to the profit, and does not begrudge the outlay. The merchant who will not dress his windows on account of the initial expense, is like the man who will not spend a dollar to make another, simply because he must part with the dollar first. Of course it would be very difficult to convince him of this, but if he can not see the comparison he must be one of the very few who think that nothing is sold through the window. The number who really think this at this date is so very small, that it is scarcely worth while combatting their ideas. They are not the successful class, nor do they deserve to be.

But window dressing is not the expensive phase of storekeeping that many think it to be. Excellent windows can be dressed all the year round, at a total cost of only a few dollars. The elaborate fancy window of the departmental dry goods store is not a necessary part of any plans for attractive windows. Some of these cost many dollars, and would not be in place in the smaller stores, but a miniature copy of the general design, used only on particular occasions, would revive an interest that might be flagging as a result of only ordinary displays. The goods themselves in nine out of ten arrangements are all that is necessary for windows that will sell, and the tenth can be so made up that the features of it that cost money can be retained for future displays, and the expense thus be reduced to a minimum.

HEATING AND PLUMBING

AN ARCHITECT ON TORONTO PLUMBING SITUATION.

IN Toronto considerable discussion has been carried on in the daily press as a result of a charge that there is a combine among Toronto plumbers to prevent legitimate competition on all contracts, to compel manufacturers to grant a discount in favor of association members and to unduly raise prices.

Most of the discussion has been contributed to people "on the outside," who have suspicions but no real knowledge of the existing conditions.

Architect S. G. Curry is recognized, however, as being in intimate touch with building operations of all kinds. His opinion is conseqnently interesting. His contribution to the discussion is given in the Toronto Star as follows:

"There is more of a combine between certain architects and plumbers than there is among the plumbers just now. Some architects in this town take a rake-off on plumbing contracts. There may or there may not be a combine at the present time. Sometimes I am almost sure that a concise understanding exists, but there is one thing about it, if it exists, it does not last for very long. Such a thing is unworkable, because there are bound to be internal dissensions over big contracts. Say one big firm comes along and lays claim to the contract on a big building on the ground that the capitalist chiefly interested has always been a customer of his. Then another man turns up and says that the original company which the capitalist is backing was a customer of his, and there is trouble right away. The association may say split the profits; but how many men would stick to an agreement which provided that course? How long would they be able to enforce it?

"Now, here are figures that you could utilize to prove your contention that a combine exists," and Mr. Curry turned up his contract book and showed the tenders on a $600 job. The figures ran up in $20 to $25 jumps to $725. The contract in question was a recent one.

"Now, that looks as if an agreement had been reached, doesn't it?" questioned the architect. "Well, just look at this," and he leafed back to contracts made in the period of building stagnation. These figures showed the same steady increase.

"I happen to know positively that no combination existed then," said Mr. Curry. "So you see that the figures prove nothing. You may twist them to show a combination or you may with safety argue that there was a healthy business competition. I do not think that a combine to any extent exists now. Here is a job I roughly estimated at $2,000 a few weeks ago. The contract was let for $2,250, with a few extras I had not reckoned on in my estimate, which was a rough one at best. Take the abnormal state of the wage market and the advance recently in the price of materials and you can consistently account for the heavy advance in plumbing work.

"I do not think there is any doubt about it that the supply houses have combined to a certain extent, but I am of the opinion that the combination only exists for the purpose of blacklisting bad debtors. In the building trade there is an unsual chance for bad debts. Men whose standing would not secure them one-fifth of the credit they are given by those in the trade are able to get almost any quantity of material owing to the existence of the lien law, which gives the supply house a hold on the stuff they have credited a man with. To collect through a lien is a matter of much annoyance, and the supply houses have simply combined to blacklist the delinquents. Some people say that instead of charging an advance a straight refusal of goods should be made, but you know that it would not be the best policy to do that.

"I suppose the plumbers do combine to a certain extent, but I do not think that it is as bad as it is made out to be. At least I have not found it so."

Copper for Steam-fittings.

AT the meeting of the Manchester Association of Engineers, held on December 5, a paper on "Some Applications of Copper in Engineering Practice" was read by Mr. W. E. Storey. An impression, said the lecturer, prevailed that as a material for use in the construction of pipes and vessels in connection with steam service, copper at the present time was under a cloud. The conditions under which it was now frequently applied had increased in stringency, particularly along the lines of higher pressures and temperatures and largely because of a lack of progress in design to meet these conditions, due to a want of knowledge of the possibilities and limitations of the metal. He hoped to be able to show how by careful attention to design on the part of the engineer, and to production and treatment on the part of those who combined to supply him with either the materials for his own manipulation, or the finished copper products, the advantages which undoubtedly attended the use of copper and its alloys might be safely utilised. The main claims that copper had to consideration and in fact to pre-eminence amongst the metals of commerce, so far as its special qualities were concerned, were (a) Its high electrical conductivity, (b) its capacity of conducting heat, (c) its extreme ductility, and (d) its resistance to corrosion. On the first of these he had nothing now to say; the second and third taken together might be said to be of extreme importance to engineers; while the last also had its interest, for such uses of copper as the manufacturing chemist, the calico printer and bleacher. Copper gained its place in the regard of engineers because of its unequalled power of transmitting heat and its great ductility, which enabled it to be worked into intricate forms with ease to the operator and without fatigue to the metal. A common cause of deterioration in the

RAMSAY'S PAINTS

GET READY!

Look after your trade for 1904, it's going to be a big one.

Have you got a decent share of the trade in your town? If not, let us get after it for you with RAMSAY'S PAINTS.

Ramsay's Paints talk and bring you trade that pays.

Ramsay's Paints sell at a price that nobody grumbles about—the lowest price for the best paint—not too high for profit making.

Let us tell you about it.

quality and strength of copper was its contact whilst hot with a reducing gas. These conditions caused a chemical change in the copper, rendering it brittle, and the effect could easily be produced on the brazing hearth by allowing the fire to be sluggish and short of the requisite amount of air-blast. Carelessness in that respect on the part of the workman was one of the most serious dangers copper had to meet. Although copper had many virtues as a material for the use of engineers there were certain faults attaching to it. Amongst these were the following: For the conductivity of either electricity or heat purity was an advantage, but chemically pure copper had very little resistance to wear. Its ductility formed its most important advantage to the coppersmith and the makers of plates, tubes, rods, and so forth; but this ductility was gained at the cost of a very low elastic limit. Notwithstanding the loss of strength resulting from subjection to high temperatures and to the action of certain gases, copper remained incomparably the best material for many purposes in the general practice of engineers. An interesting discussion followed the reading of the paper, particularly with regard to the use of copper steam-pipes, the consensus of opinion being that solid-drawn copper pipes were more reliable than brazed pipes. In main steam ranges for high pressure, steel was thought to possess a great advantage over copper in the matter of price, whilst being at least equally reliable. The use of copper was, however, advantageous for expansion pipes and making up pipes. It was urged that cheapness was not the greatest economy in copper pipes, for unless a sufficient price were paid it was impossible to get good workmanship, and the result of using copper pipes under such conditions was likely to prove unsatisfactory. —Ironmonger.

The London Boiler Explosion.

In reply to an enquiry by "Hardware and Metal" Wm. Smith, of the Smith Plumbing Co., London, Ont., writes: "Re the explosion of hot water boilers at the Wolseley Barracks, in my mind there is no doubt but that it was the shutting off of the main valves that caused it. There were two boilers, which were connected together with twin headers, and each boiler was valved on the connection between boiler and header. If those were open it would be impossible to explode them."

U. S. Sanitary Earthenware Trade.

THE Potteries Selling Company of Trenton, N.J., who were incorporated in New Jersey, on December 16, with a capital stock of $50,000, have practically taken over the business of the Sanitary Potters' Association. As a result of their incorporation it is said that the injunction recently issued by the United States Court of Appeals affecting all Siphon Jets and Hoppers, and which has resulted in increased prices on these types of closets, has been filed against each and every manufacturing potter in Trenton. The Potteries Selling Company have obtained the sole right to manufacture Siphon Jet Closets and Siphon Hoppers in the United States. The Dececo Company, of Boston, Mass., who are the assignees of the patent rights of William Smith, the inventor of the Siphon Jet Closet, is to be paid a royalty on each closet made. The Potteries Selling Company, aside from those incorporators just named, are composed of one member from each of the following concerns: The Trenton Potteries Company, Thomas Maddock's Sons Company, Belmar Pottery Company, Ironsides Pottery Company, Keystone Pottery Company, Great Western Pottery Company, Riverside Pottery Company, Berrian Pottery Company, Standard Sanitary Pottery Company, Acme Sanitary Pottery Company, Fidelity Pottery Company, Elite Pottery Company, Camden Pottery Company, Mercer Pottery Company, Sanitary Earthen Ware Specialty Company, Willetts Mfg. Company and the Universal Sanitary Mfg. Company. Owing to their membership in the Potteries Selling Company they are privileged to manufacture staple Siphon Jets, Siphon Acting Hoppers and Traps, and Siphon Hoppers with Jets, for which privilege they will pay the Potteries Selling Company a royalty, which in turn is paid over to the Dececo Company. This practically gives the Potteries Selling Company absolute control of the Sanitary Earthen Ware situation in the United States and those who are not affiliated with them cannot manufacture these goods. This type of closet is used more than any other, and it is practically impossible for any sanitary pottery to exist without the privilege of manufacturing this class of ware. Under date of December 16 telegrams withdrawing the discounts on prices of Sanitary Earthen Ware were issued to the trade, and new prices were announced which show advances of from 10 to 30 per cent. Staple articles are the only ones on which quotations have been made so far. All articles not included in the staple list will be quoted in the near future. The details regarding the new selling company and the reasons for the advance in prices have recently been explained in a letter issued to the trade.—The Metal Worker.

Plumbing and Heating Notes.

A curator has been appointed to P. Sicard, plumber, Montreal.

F. A. Carpenter & Co., wholesale dealers in steam fitters supplies, Hamilton, have assigned to C. S. Scott.

The premises of C. Destrempes, plumber and tinsmith, St. Cuthbert, Que., have been burned out: no insurance.

Building Notes.

The Ottawa post-office, a $100,000 building, was burned on Monday night.

The Mount Royal Club, Montreal, was burned on Tuesday morning. It will be rebuilt.

The National Club, Toronto, have decided to purchase the Robinson property, Bay street, and to erect a club house costing in all $105,000.

Building Permits Issued.

MONTREAL.

P. Decarrie, 325 Centre street, to erect on 526 Centre, a two-storey third class dwelling house, to cost $1,800.

Mrs. H. R. Prefontaine, 318 Sherbrooke street, to erect on Duquette street a one-storey factory, dimensions 30x80, to cost $1,500.

The Metropolitan Bank, Toronto, to erect on St. James street, a six-storey building, dimensions 29x110, to cost $80,000; L. Beaudry contractor.

Michael Tracey, 334 St. Patrick street, to erect on St. Patrick street a two-storey third class house forming two dwellings; dimensions 19x54; to cost $1,500.

N. Forget, 105 1-2 Lusignon street, to erect on Barre street two two-storey third class houses each forming two dwellings; dimensions of each 33x29; to cost $1,700 each.

The Rainy River Lumber Co., Rainy River, Ont., have been incorporated with a capital of $1,000,000, to carry on the business of lumbermen, saw and planing millers and manufacturers of lumber and woodenware. The directors are T. H. Shelvin, E. L. Carpenter, and W. F. Brooks, all of Minneapolis, U.S.A.

CANADIAN ASBESTOS.

THE larger portion of the supply of asbestos is now furnished by Canada, in which country the production has increased from 50 tons in 1878 to 40,420 tons (value, $1,203,152) in 1902. In the latter year the United States furnished 1,010, and Italy and Russia 2,000 tons of asbestos. The brittle hornblende asbestos is chiefly used, says a contemporary, where resistance to heat and acids is demanded, but for spinning only the highly elastic fibers of serpentine or chrysolite asbestos are suitable. The elasticity of asbestos fibers appears to diminish with their content of water; consequently, fibers which have been subjected to high temperatures by reason of forest fires are brittle.

In Canada the kinds of asbestos found, on the one hand, at Templeton, and on the other at Black Lake and Thetford, are geologically different. In the former case the serpentine occurs in Crystalline limestone stratified with gneiss, as long bands without sharp edges, or in ellipsoidal forms. The asbestos runs through the serpentine, parallel to the edges of the latter, in veins from 4 to 40 mm. thick, and, at the most, 3 m. long. The occurrence of serpentine in this district is not, however, sufficiently uniform or regular to allow of profitable mining, although the asbestos is of excellent quality.

Of more commercial importance are the deposits at Thetford and Black Lake, between Sherbrook and Quebec, 150 miles west of Montreal. Here the serpentine is associated with Cambrian schist, conglomerate and quartzitic sandstone; it contains nodules and masses of steatite and chrome ironstone, and also, though not invariably, veins of asbestos from 5 to 80 mm. thick and up to 20 m. long. The asbestos is silky and very elastic, but is frequently torn and disintegrated by fissures and clefts. The mining is mostly carried on in open workings. The better kinds of asbestos are sorted by hand and are divided into the classes: "Crude 1," with fibers over 1¼ inches long, and "Crude 2," with fibers from ½ to 1¼ inches long. In the mechanical process of preparation the fibers are frequently disintegrated; the product is separated into two classes—viz.: "Fiber," that with the long fibers, and "Paper Stock," with the shorter ones.

FINANCE AND INSURANCE

AN examination of the list of stockholders in Canadian banks reveals the surprising fact that directors of the various banks are comparatively small holders of the stock in the institutions represented by them. In nearly every case they hold personally an insignificant proportion of the capital stock and many of them own barely enough to qualify for a bank director. Does it not appear a little strange that those to whom the piloting of a financial ship is entrusted should have so little practical interest in it?

* * *

THE banks of Canada raised their entire authorized capitalization to $97,046,666 during the ten months of 1903, ending with October, an increase of $13,714,100 over last year's capitalization; their paid up capital to $49,989,361, an increase of $5,471,680; their note circulation to $70,480,611, an increase of $9,906,467; their demand deposits to $118,070,088, an increase of $2,179,639; their notice deposits to $275,939,608, an increase of $21,721,739: their aggregate loans to $452,137,008, an increase of $34,168,075; and their assets to $660,520,201, an increase of $25,131,992; call loans in Canada have been pulled down by nearly $11,000,000, and current loans for commercial purposes increased to the extent of $59,953,073.

* * *

A "COMMUNITY of interest" agreement has been arranged between the Dresdner Bank and the Shaaffhausen Bankverein, two of the largest banks of the German Empire, making the new combination, as far as mere capital is concerned the strongest banking institution in Germany. The capital of the Dresdner Bank is £6,500,000, with £1,700,000 reserves; that of the Schaaffhausen Bankverein £5,000,000 with £1,000,000 reserves. Thus the combination will have a total active capital of £14,200,000. In future both banks will conduct their business in common while maintaining each its separate existence, and will divide their earnings upon the basis of the capital and reserves of each institution. At the same time, two directors and three members of the Board of Overseers of each bank are to be elected by the other bank, thus securing a personal as well as a financial union. The form of union here outlined is not uncommon in Germany. Many industrial establishments have become allied on the same basis, and two of the chief banks of the kingdom of Wurtemberg have maintained a similar arrangement for above 20 years.

* * *

IT is rumored that English life assurance companies are becoming alarmed at the shrinkage in their Canadian business. The offices of home companies are rapidly increasing their business, while the branches of English companies situated in Canada show a record of steadily diminishing receipts. One reason given for this is the protective measures adopted by the colonies in respect to insurance. Another reason undoubtedly is the comparatively low rate of interest on securities prevailing in England. Insurance companies can realize more on their investments than the English companies and have the additional advantage of being on the inside in the event of competition.

* * *

THE new president of the American Bankers' Association is Mr. F. G. Bigelow, president of the First National Bank of Milwaukee. Mr. Bigelow is recognized all over the States as one of the ablest bankers in the country. He is in addition a man who has kept in close touch with and taken a prominent part in the initiation and development of the more important industrial and commercial enterprises in the United States.

* * *

A LEADING exchange says there is no business or profession which offers so much freedom and independence, and such excellent opportunities to young Canadians of enterprise and energy as that of life insurance. In these days of the strenuous life, no matter what profession or business a person is engaged in, success cannot be achieved by sitting down and "waiting for something to turn up." But the young man who applies the same amount of energy, determination and systematic work to the conducting of a life insurance agency as might be applied by him to any other profession or business, will, as a rule, secure a greater immediate return, establish a more permanent income and have better prospects of ultimately attaining to a prominent position equivalent to that held by most men in the commercial, financial or professional life of the country.

* * *

AS far as the leading banks are concerned business throughout the Northwest this year has been greatly hampered by the enactments of the Grain Act. Although the banks have made special provision in order to meet all demands, they find that their money will now be tied up until the opening of navigation simply because in many instances farmers have been unable to get a sufficient number of cars.

* * *

THE Havana Post refers to the recent completion of the Cuba Railroad between Santiago de Cuba and Havana, and of the new electric railroad running from Havana to Marianoo, as memorable events for Cuba and Canada. Both are Canadian enterprises; the Cuba Railroad owes its existence to Canadian capital and the Canadian railway magnate Sir Wm. Van Horne, and will undoubtedly prove a great factor in the development of Cuba. The new electric railroad was built mostly with Canadian capital, its president being E. Hanson, one of the most progressive of Canadians.

* * *

The New York Clearing House Association has made an announcement to the effect that they are considering the question of charging on cheques issued on points outside of New York. All items, from whomsoever received payable at points in Canada, the collecting banks

shall charge not less than one-quarter of one per cent. of the amount of the items. In case the charge upon any item at the rates specified does not equal ten cents, the collecting bank shall charge no less than that sum; but all items received from any one person at the same time, and payable at the same place, may be added together and treated as one item for the purpose of fixing the amount chargeable.

INCREASE IN ACCIDENT INSURANCE.

A BIG increase in the volume of accident insurance has necessitated the formation of what is to be known as the Canadian Accident Underwriters' Association, consisting of two sections, each with a governing council, one in Toronto, the other in Montreal. D. Murphy, Ottawa, has been elected president of the association, and J. Hyde, Montreal, and W. H. Cross, Toronto, joint secretaries, one for the Eastern, the other for the Western field.

In answer to the question what are the objects of the proposed association? one of the officers said: "Now, all insurance is based upon the law of averages. Seldom, however, do two men think alike; so that when a new risk appears, though the assessors of the various accident companies may approximately agree upon its value, no one will be actually correct. But, if many combine, their average will be approximately right. The striking of proper averages along the whole line of risks will, therefore, be one of the objects of the proposed association.

"Again, the law on the subject of accidents, especially in factories, requires watching by the companies for their own protection; not perhaps with a view to its amendment, but to so draw the insurance contracts as to protect the companies in case of actions brought by unscrupulous persons who have no right to relief under the law, but who strive to make the company in which they may be insured a party plaintiff. Besides, one company may frame its contract in certain words, while another, meaning the same thing, will draft theirs in different terms. When these contracts come to be interpreted by the courts, and especially by juries diverse meanings willl be accorded to each. The association will strive to so identify these policies in their form as to avoid this difficulty."

FINANCE AND INSURANCE NOTES.

The business of the Empire Loan and Savings Co. has been transferred to the Sun and Hastings Savings and Loan Co., of Ontario.

The site occupied by the Molsons Bank at the corner of King and Bay streets, Toronto, has been sold to the Canada Life Assurance Co.

The Bank of Montreal has recently established branches at Edmonton, Alberta; Gretna, Man.; and Sherman avenue, Hamilton.

Blair & Co, bankers, St. John, N.B., have suspended. The house has been in business about fifteen years and consists of A. C. and A. Blair.

Halifax banking institutions are reported to have made great strides during the year 1903, bank clearings showing an increase of $5,334,729 over 1902.

The London Financial News is authority for the statement that there is talk of the establishment of a special department on the London Stock Exchange to be devoted exclusively to Canadian securities.

W. R. Travers, manager of Merchants' Bank, Hamilton, has resigned, owing to ill-health. His successor is A. B. Patterson, manager of the St. Thomas branch.

The past season has been the most disastrous for inland lake marine underwriters since 1898. Their aggregate losses, including cargoes, were about $2,100,000, which also represents the total amount of premiums paid.

The old banking house of E. D. O'Flyn & Sons, Madoc, have sold out to the Dominion Bank. F. W. O'Flyn remains as manager of the Dominion Bank, Madoc, and H. H. O'Flyn, has accepted a position with the bank in Toronto.

In compliance with a request from the civic authorities from London, Ont., the Fire Underwriters Association have agreed to reduce fire insurance rates in that city as soon as certain improvements in the fire protection system are made.

The Bank of Montreal is erecting premises for the branch at Birchy Cove, Newfoundland. It has also acquired a property at the corner of Greene and Western avenue, Westmount, where premises are being erected for the occupation of a branch to be established there.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE Double Use Mitten Co., incorporated in the State of Illinois, have been licensed by the Ontario Government to manufacture and sell in Ontario all kinds of gloves and mitts, provided that in so doing they do not use a larger capital than the sum of $75,000.

* * *

The Trent Power Co., Trenton, Ont., have been incorporated with a capital of $500,000, to construct, maintain aod operate works for the production and distribution of electrical energy for the purposes of light, heat and power. The directors are D. Gilmour and R. Weddell, both of Trenton; Hon. S. H. Blake, E. W. McNeil, and R. Gowans, all of Toronto.

* * *

Mining is active in the Superior region. Among the mining men who visited Toronto this week were W. Wylie, Port Arthur, desiring a Government drill for use on an iron range near Lake Nepigon; F. Hille, Port Arthur, and W. McVittie, Sudbury, in the interests of iron deposits. Mr. McVittie reports that The Canadian Copper Co. are rushing business on their new smelter at Copper Cliff.

* * *

General Manager Hays, of the Grand Trunk, says that the Grand Trunk Pacific will certainly be started in the Spring.

The Mond Nickel Co., London, England, have closed down the Victoria mines at Sudbury, Ont. The reason given for the action is that they have a surplus stock on hand, and therefore have suspended operations for a time. The smelters at the mines have been leased to The International Copper Co. of Philadelphia, for smelting copper from Massey Station.

* * *

The Corundum Refiners, Ltd., Toronto, have been incorporated with a capital of $1,000,000, to carry on in all its branches the operations of a mining, milling, reduction and development company. The directors are J. N. Scatcherd, C. R. Huntley and J. C. Conway, all of Buffalo; J. A. Roberts, New York; J. H. Tilden and H. P. Coburn, of Hamilton, Ont.; H. H. Dewart, W. Vandusen, J. H. Jewell, all of Toronto; and W. B. Rankine, Niagara Falls, Ont.

* * *

The output of The Dominion Coal Co., Cape Breton, for the past year was approximately 3,150,000 tons, and shipments 2,806,000, practically the same as for the year preceding. The year 1904 will in all probability show a very material increase in these figures. President James Ross gave out the following statement last week: "Now that the coal company have taken over the monagement of their own affairs I might say that the chief feature of the policy of the company will be to increase the output as rapidly as possible. Our output has now reached all but 15,000 tons a day, while last Thursday out of No. 2 Dominion mine 4,900 tons were taken."

* * *

The plant of The Union Carbide Co., Sault Ste. Marie, Ont., the largest plant for the manufacture of calcium carbide in the world, has commenced operations. This is the first industry to use power from the power canal of The Michigan Lake Superior Power Co. Half of the machinery is installed in the big power house, and the plant proper connects with the building, and the two make a building nearly half a mile in length. The plant starts with about 300 men at work, and the force will be increased as fast as possible until 1,000 are employed. The plant will run night and day. The demand for carbide is great and the company have many orders to fill.

* * *

The Rossland Miner estimates the output of the district at 377,134 tons, with a value of $4,631,280. During the ten years of the camp's history 1,687,768 tons of ore has been produced, having an estimated value of $26,816,342. The camp has enjoyed a most prosperous year, and notable strides have been accomplished in conoection with the mining industry. The increase in tonnage is approximately 50,000 tons over last year. A notable feature was the inauguration of concentration and its successful application. The Le Roi No. 2 plant is now treating at a profit ores carrying net values in excess of $5.50, and the margin will be substantially lowered in the larger plants now in course of construction.

* * *

NOTES.

E. S. Brennan & Co., of Hamilton, have arranged to erect a large sawmill on their new limits in the Township of Osborne, Nipissing County, in the Spring.

Shedden Brush Co., Hamilton, have been incorporated with a capital of $40,000, to manufacture and deal in brushes. The directors are E. Shedden, G. Shedden, and D. Garson, all of Hamilton.

It is announced that H. M. Whitney, of Boston, has resigned his position as vice president of The Dominion Coal Co., and is also retiring from the board of directors. He is succeeded by J. R. Wilson, Montreal.

The Industrial progress of Sydney, N.S., was marked at the beginning of the year by the incorporation of the municipality as a city. Sydney is now an important port, the customs duties for 1903 being $192,869.

The Canadian Cooperage Manufacturing Co., Galetta, Ont., have been incorporated with a capital of $100,000, to manufacture and deal in cooperage stock. The directors are A. H. Royce, Geo. Royce and Jas. Goldthorpe, all of Toronto.

The Canada National Land and Development Co., Toronto, have been incorporated with a capital of $50,000, to deal in real estate. The directors are A. Cartwright, Bedford Jones, Clarkson Jones and R. B. Beaumont, all of Toronto.

The plans calling for the construction of a system of two-storey steel freight sheds in the Montreal harbor at the cost of $2,500,000, have been approved by the Deputy Minister of Marine and Fisheries, and the work is to be awarded by contract.

W. E. Chalcraft & Co., Toronto, have been incorporated with a capital of $100,000, to carry on a wholesale and retail clothing and dry goods business. She directors are G. Randall, C. Chalcraft, E. B. Howard, C. K. Burt and J. C. Beryer, all of Toronto.

Church & Watt, Simcoe, Ont., have been incorporated with a capital of $40,000, to carry on a wholesale and retail harness and saddlery business. The directors are J. W. Church, Simcoe; W. A. Watt, and T. E. Richards, both of St. Mary's, Ont.

Carney Lumber Co., Massey, Algoma District, have been incorporated with a capital of $500,000, to carry on the business of a manufacturer and dealer in lumber. The directors are J. S. Lovell, Wm. Bain, R. Gowans, E. W. McNeil and R. Richardson, all of Toronto.

The Smith Mfg. Co., Toronto, have been incorporated with a capital of $40,000, to buy and sell machinery and apparatus and to generate light, heat and power. The directors are Geo. Smith, G. H. Smith, Alex. Burns, H. S. Harwood, A. N. Burns and J. A. Burns, all of Toronto.

The output of The Dominion Iron and Steel Co., Cape Breton, for the year 1903 is estimated at about 140,000 tons of steel billets, and about 130,000 tons of pig iron. The overage monthly output at present is about 9,000 tons. The work

in the construction of the finishing mills is being rushed night and day.

The Ontario Lead and Zinc Co., Port Arthur, have been incorporated with a capital of $660,000, to carry on in all its branches the operations of a mining, milling, reduction and development company. The directors are E. C. Kennedy, Superior, U.S.A.; J. A. MacIntosh and A. R. Clute, both of Port Arthur.

Granite, Ltd., Toronto, have been incarporated with a capital of $30,000, to acquire the property of the Granite Curling and Skating Rink. The directors are C. Boech, A. A. Allan, J. Baird, D. S. Barclay, G. H. Gooderham, M. Rawlinson, C. C. Dalton, W. C. Matthews, C. P. Smith, F. G. Cox, E. A. Badenach and R. S. Patterson, all of Toronto.

The Dominion Bridge Co. are putting in the steel girders on the 10-ft. span at Four-Mile Creek on the T. & N. O. Railway. This is the first bridge north of North Bay. The girders for the bridge over the North River are also ready at North Bay, but these cannot be installed till the Summer, as the shore piers and abutments are not yet in. The water was too high last Autumn for this work to be done, consequently the contractors must wait till Spring.

MONEY BY-LAWS VOTED ON.

Sandwich.—The by-law to build a sewer on Mill street was defeated. The by-law to continue the Board of Water Commissioners was defeated.

Lindsay.—The by-law to grant $10,000 for waterworks extension was carried.

Goderich.—The vote on the by-laws resulted as follows: C.P.R. bonus, for, 452, against, 19; National Cloak Co., for, 472, against, 22; school by-law, for, 162, against, 249.

St. Mary's.—Carnegie library by-law was carried by 27 majority.

Harriston.—The by-law to aid re-building of the High School carried with little opposition. The by-law to exempt The Dowling-Leighton Co. from taxes was defeated.

Stayner.—The by-law for the purpose of borrowing $10,000 for new cement sidewalks was carried by 102 majority.

Kingsville.—By-law granting loan to Kingsville Woollen Mills was carried by a vote of 216 to 19.

Collingwood.—The good roads and the elevator by-laws carried by large majorities.

Brockville.—The vote on a by-law to raise $25,000 for improvements to the ,ighting plant of the town resulted in a majority of 100 in favor of the by-law. Another by-law to amalgamate the light and water boards was defeated by 20 votes.

Welland.—The Frost by-law for the exemption from taxes was defeated.

Kingston.—The by-law to elect aldermen at large was defeated by a large majority.

Athens.—The referendum vote taken at Athens on Monday for the location of a site for the Town Hall was carried in favor of the Green site by a majority of 31.

Ingersoll.—The by-laws for the purchase of the gas and electric light plants of a new town hall were all three defeated by large majorities.

Holland Landing.—Vote on county roads system resulted as follows: For, 9, against, 46.

Woodstock.—The by-law to establish a free library here was carried by 350 majority.

Chatham.—Three by-laws were voted on, one to issue debentures to consolidate the city's floating debt of $50,000, one to make a loan of $30,000 to Wybrow, of Birmingham, England, to erect a pork packing factory, and one to aid a radial electric railway by a loan of $50,000. All three were defeated.

Dundas.—A by-law was carried by a majority of 62 for the issue of debentures for appropriation of $14,000 for sidewalks.

Waterloo.—The $10,000 waterworks by-law to increase the town's present plant carried. The plebiscite re the town's purchasing of the electric lighting and gas plants also secured a good majority.

Belleville.—The by-law authorizing the council to borrow $50,000 with which to purchase, repair, and run the gas works as a municipal concern, was carried, the vote being, for, 358, against, 337.

Oshawa.—The citizens by a large majority voted in favor of pumping water from the lake instead of being supplied from Raglan Springs.

Peterboro.—The Street Railway by-law was voted on and carried by over 400 majority. The by-law for the expenditure of $10,000 for the purchase of a gravel pit was also carried.

St. Thomas.—Pere Marquette car shops bonus by-law was carried by a large majority. The amount voted was $20,000.

Ottawa.—A by-law for $50,000 to establish a municipal electric light plant was passed.

Perth.—The by-law for the purchase of the plant and equipment of The Perth Electric Light Co. by the town was carried by a majority of 133 votes. The free library plebiscite was defeated by 9 votes.

Wingham.—A by-law to appropriate $36,000 for a new system of waterworks and sewerage was defeated by a majority of 19.

Stratford.—By-laws ratifying the appointment of park and water commissioners were carried.

Strathroy.—The by-law to grant a $5,000 bonus to The Cameron, Dunn, Handle Co. was carried.

SOME HINTS TO BUILDERS.

Sash frames, with sash weights, locks and trim complete, may be taken out of old buildings that are being taken down and preserved just as good as new by screwing slats and braces on them, which not only keeps the frame square, but prevents the glass from being broken.

Doors, frames, and trims may also be kept in good order until used, by taking the same precautions as in window frames. Old scantlings and joists should have all nails drawn or hammered in before piling away. Counters, shelving, drawers and other store-fittings should be kindly dealt with. They will be wanted sooner or later.

Old flooring can seldom be utilized, though I have seen it used for temporary purposes, such as fencing, covering of verandah floors while finishing work or plastering, etc. As a rule, however, it does not pay to take it up carefully and preserve it. Conductor pipes, metalic cornices, and sheet metal work generally, can seldom be made available a second time, though all is worth caring for, as some parties may use it for repairs.

Gas fixtures should be cared for and stowed away in some dry place. They can often be made available and are not easily renovated if soiled or tarnished.

Sinks, wash-basins, bath-tubs, traps, heating appliances, grates, mantels and hearth-stones should be moved with care. They are always worth money and may be used in many places as substitutes for more inferior fixings.—National Builder.

RUSSIA IRON

is almost out of the market; not quite; 98 per cent of the finest sheet iron is Wood's Patent-Planished.

Some think one is as good as the other; some favor Wood's; and some favor Russia.

We make Wood's.

Quick service.

Return a whole sheet for an inch of fault.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WALKER'S SELF=PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

"THE REAL" SAFETY RAZOR IS A SELLER

OUR CONDITIONS ARE : Give to likely customers to try and if not absolutely satisfactory return it.

AGENTS FOR CANADA:

RICE LEWIS & SON, Limited, Toronto.
CAVERHILL, LEARMONT & CO., Montreal.

A New Kind of Razor

You'll be surprised at the way "The Real" Safety Razor shaves—*different* from any other razor.

It shaves clean and keen—smooth and easy.

It doesn't pull or break hairs.

"The Real" is the only perfect razor for *self-shaving*.

The *rigid handle* and the *anti-cut guard* make it better than the ordinary razor—*better control of the blade* on *face, strop* or *hone*—*quicker work* possible—*no cutting*.

It's better than other "safety razors" because it's a *razor*—not a hoe. Made of the *very finest* razor steel—*full concave*—2¼ in. blade.

GEO. W. KORN RAZOR MFG. CO., Little Valley, N.Y., U.S.A.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1.000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

GOLDEN CROWN,	500	"	"	"
STANDARD,	500	"	"	"
SISAL,	500	"	"	"

Blue Ribbon is no doubt the Queen of Binder Twine. It runs six hundred and fifty feet to the pound, and is manufactured from most select Manila Fibre. Six hundred and fifty foot Twine is the only Twine manufactured entirely from Manila Fibre. Dealers should beware of so-called "Manila" Twines which are advertised to measure less than 650 feet to the pound. They are mixed Twines.

Write for samples.

That Side Wire Tired Feeling.

All through the trade is getting that feeling of confidence in the Dunlop Side Wire Tire. The points of it are so simple that its merits are plain at a glance. The retaining wires do not pass through the centre of the rubber tire, but to either side of it, on the outside, close to the rim of the wheel, and these retaining wires do not press against the rubber, but against across bars vulcanized into it at regular intervals. The wearing, eating-into force of the wire is therefore counteracted. The tire may be fastened to the wheel with as tight a pressure as the rim will carry without the wire cutting into the rubber, and the grip is so tight that sand and gravel cannot work between the tire and the rim of the wheel.

Hold a dime close to your eye with your right hand and a bright silver dollar a few inches away with your left; you cannot see the dollar because the smaller coin obscures your vision.

So it is with some people; in their eagerness to save a dollar they often lose sight of the fifty within their reach.

They would rather have a penny than a pound — if it meant spending the penny to get the pound.

Does the illustration apply?

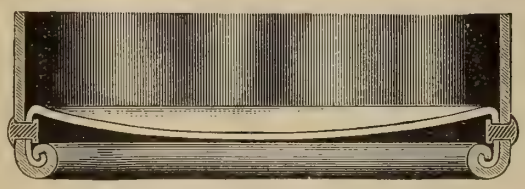
KEMP'S BROAD HOOP ROLL RIM BOTTOM MILK CAN TRIMMINGS



A criticising public have used them for the past five years and the increasing demand is proof of their superiority, also evidence of the satisfaction which they give.

The Roll Rim Bottom having no sharp turns does not break the grain of the metal or lessen its wearing qualities.

Narrow Top Hoops can be supplied in place of Broad Top Hoops if desired.

For Strength, Durability and Finish our Trimmings are unexcelled.

They cost no more than inferior qualities.

We also carry in stock a full line of **First Quality Tinned Iron,** cut suitable for the different size of Trimmings, which we will supply at the lowest current market quotations.

KEMP MANUFACTURING CO., TORONTO, CANADA.

FILLING UP THE GREAT WEST

By Hon. Clifford Sifton, Minister of Interior, Canada.

THE question of immigration—in other words the acquisition for the Dominion of a producing population and its settlement on the land—is of the utmost importance to the Empire. Gentlemen conversant with the affairs of Empire, know that one of the difficulties which beset us has been the drain upon our young men from south of the boundary line. We can only keep them by furnishing them with something to do, and by building up the country in such a way as that they could follow their occupations as profitably as in any other land. We have been in the position for a long time of possessing an equipment which enabled us to do business with a larger market than we had.

Courtesy Canadian Northern Railway

The Pioneer Age of the Red River Cart.

Our main resource has been agriculture, but comparatively only a few can follow it, and, unless they find profitable employment in it, they will leave Canada. We have tried to enable this country to do business on a larger scale, but development is slow under all Governments. I have been unceasing during the last seven years in trying to grapple with this problem.

Work in Western States.

When I took office I looked over the ground to see where this work could be prosecuted best, and found it was in the Western States. In 1897 we established agencies in Chicago, Omaha, Kansas City and St. Paul, and in a number of minor places; we had between 200 and 300 agents paid by commission. There were difficulties in the way of our agents which you can hardly realize. We had one young man who came back and told us that he could not make any impression; that people did not know where Canada was! In the last five years that man has sent to Canada 5,000 of the best people we have in the West. He sent us 1,500 German-Americans, the very best class of farmers we have.

"We organized our work in 1897 and adopted the method which I shall outline to you. In 1898 we had only 712 immigrants from the United States. The influx continued to be so small that I saw something had to be done, and I authorized advertisements in American papers, which reached 5,700,000 families. We found that the Western States Editorial Associations were in the habit of taking yearly excursions. We arranged one for them, which took them from the Atlantic to the Pacific, and when they got home they could not do less than publish appreciative descriptions of Canada, which we promptly collected in the shape of a book. We sent 100,000 of these to our agents in Wisconsin, Iowa and Michigan, so that when a man found any fault with Canada we could point him out the answer from his own people. For another thing the editors of these papers all refused to publish anything derogatory to Canada after that.

Work in Britain.

"In Great Britain our work has been of a very difficult character. For many years immigration work there was under the care of the High Commissioner, and was carried on in a semi-diplomatic manner, and not in a business way. (Laughter.) It was not the fault of the High Commissioner or his officials, who had to work under the conditions under which they were placed. I sent Mr. Smart over there, and had the work reorganized on a purely business basis and placed it under an official who had nothing else to do. He got the names of all the agriculaural laborers he could and mailed 1,200,000 copies of a paper on the resources of Canada. You would have thought people would have known all about Canada, but the issue was hardly out before thousands of people wrote for particulars. By advertisements we reached some ten million people, and we placed atlases and maps in the schools of the United Kingdom, reaching the people through the children which I found the best way of getting at the middle classes. In the coronation arch we had a splendid advertisement, and I am told it was the only picture of the coronation hundreds took away with them. There has been a marked improvement in our immigration because of that. We have a handsome office now in Charing Cross, where the clerks begin at 9 and leave off at 6, and where business is done as promptly as

in any office in Toronto. The fittings are Canadian, set up by Canadian workmen, and the office is a standing advertisement to this country, and the way we do business.

Work on the Continent.

On the Continent we found our work in an unsatisfactory condition, and I decided to place it in the hands of the North Atlantic Trading Association. The class of people which is being sent out is almost entirely agriculaural.

Results.

In 1900 we got from all countries 42,500, and in the fiscal year of 1903 we got 128,900. Of these 49,488 were from the United States, 41,792 from the United Kingdom, and 37,000 from the Continent. For the calendar year of 1903 we got 135,000 people, 30,000 more than the year before. Practically all these go on the land. The total cost of

The Modern Age of the Passenger Coach.
Courtesy Canadian Northern Railway.

immigration, not including the taking care of them, is $5.67 per head on the average. These people have brought in $18,747,000 worth of settlers' effects, and over $25,000,000 in cash. The people from the United States settle on land and produce, on a moderate estimate, $2,000 worth per annum each. It is a mistaken idea that all the available lands in the States are taken up, so it shows how the people realize the advantage of our lands. Last year there were 31,000 homesteads taken up in the West. The class we want is the farming class, men from the United States, from the Old Land and from Europe, with a knowledge of agriculture.

"My own view of the work which my department has to perform is that it has the most important task of the Government of Canada at present. If the Government of which I am a member, or any succeeding it, is able to fairly fill the West with a hardy and stable class of people they will be doing the West a most important service and all the other provinces will profit likewise."

OPEN AN OFFICE IN WINNIPEG.

The Maclean Publishing Co., Montreal, Toronto and Winnipeg, have secured the services of Mr. L. P. Luxton as their western Canadian representative. Mr. Luxton has secured an office in the McIntyre block, and is now busily engaged in looking after the interests of the Maclean trade papers, which are the best of their kind in Canada, and the equal of most trade papers published the world over. Col. J. B. Maclean, the pivot upon which these publications revolve, believes in giving Canadian readers the best, and to say that he has succeeded admirably in this respect would be putting it mildly. The Dry Goods Review, The Canadian Grocer, "Hardware and Metal," Bookseller and Stationer, and Military Gazette are among the Maclean newspapers.—The Winnipeg Tribune.

CANADIAN PREFERENTIAL TARIFF.

A MOST practical example of the good effects upon British exports which have been brought about by the rebate in duty on goods of "British origin" imported into Canada has recently come to our notice, says Commercial Bristol.

A well-known firm of manufacturers in our city had been doing a small intermittent trade in Canada, and in 1896 one of the partners went to the Dominion with a view to see on the spot whether this trade was worth following up.

He was only in Canada for a week, but placed some good agents, advised his firm to advertise in the best journal of their trade, and came home satisfied that some increase in orders would follow in course of time.

That year the firm's Canadian trade was ten times greater in volume than in 1895, and a year or so after, when the preferential tariff came into operation, it again increased considerably.

The further rebate from 25 per cent. to 33 1-3 per cent. again helped this firm's Canadian trade, and this present year is their best record, and quite six times as much as it was in 1896, just before the new tariff came into force.

In one week at the end of October the firm under notice booked Canadian orders equal to the total value of some whole year's trade, and they now confidentlv expect a further large extension of trade next year.

A KINDLY REMEMBRANCE.

At the commencement of the new businesyear, the general manager of E. W. Gillett Co., Limited. Mr. Wm. Dobie, was waited upon by the 16 travelling representatives and members of the office staff and presented with a beautiful French gilt ornamental ink stand and also a thermometer and desk calendar combined. At the same time the boys did not forget Mrs. Dobie, and she also received a fine ink stand of the same material.

Mr. Dobie in acknowledging these beautiful gifts, thanked the doners not only for them but for the excellent services rendered to the company during the year just ended, and concluded by wishing all a prosperous and happy new year.

CATALOGUES, BOOKLETS, ETC.

HARDWARE AND METAL would be pleased to review catalogues, booklets or other such publications issued by manufcturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. No charge will be made for these services.

DOOR AND WINDOW FURNITURE.

E. Keeling, Teale & Co., Limited Ravenscourt square, London, Eng., are issuing a comprehensive catalogue and price list of the door furniture, casement fasteners and stays, wrought iron gates and railings, lift enclosures and staircase balusters, portico shelters and covered ways, bank and door grilles, shop and street lamps, electric, oil and gas fittings, church fittings, etc. Any readers of "Hardware and Metal" who are interested in these lines would be wise to secure this catalogue as Keeling, Teale & Co. are recognized as up-to-date manufacturers of artistic and original designs in their line.

INTERNATIONAL STOCK BOOK.

The International Stock Food Co., Minneapolis and Toronto, have issued one of the most useful stock books which any owner of animals could desire. It is an 160-page publication, illustrated with photogravures of some of the most famous horses, cattle and other stock of the present day, the first illustration being a cut of "Dan Patch," 1.56 1-4, the champion harness horse of the world. Of the book over 40 pages are devoted to horses, 25 to cattle, 50 to sheep and hogs, over 20 to veterinary information and suggestions and 20 to poultry. The engravings in the book cost over $3,000 and the printing, etc., has all been of high-grade. Consequently the book is likely to be kept on file by stock owners generally. It will be sent free to any hardware dealer mentioning this paper. If further copies were desired for distribution to large customers this would also be arranged by coresponding with the Toronto office of the company.

GREETINGS FROM THE EAST.

"Hardware and Metal" desires to acknowledge the receipt of one of the daintiest New Year's cards of the season from Frank Powers, the Lunenburg plumber and stove man, and would reciprocate in the expression of good wishes for a prosperous 1904.

FIRE HOSE AND SUPPLIES.

The Gutta Percha and Rubber Mfg. Co., of Toronto, have ready for the use of the trade a useful booklet descriptive of their fire hose and supplies. The prominence of this firm and the reputation of the products are so generally recognized that this catalogue should be on the shelves of every hardware dealer. It can be had on application.

DOMINION BELTING CALENDAR.

The calendar issued by the Dominion Belting Co., Hamilton, is entirely original. The background of the calendar is an accurate representation of belting with as a central figure a fine maple leaf, the national emblem. The calendar would be a neat one for office use and will be sent on request to readers of "Hardware and Metal."

LOCKERBY & M'COMB.

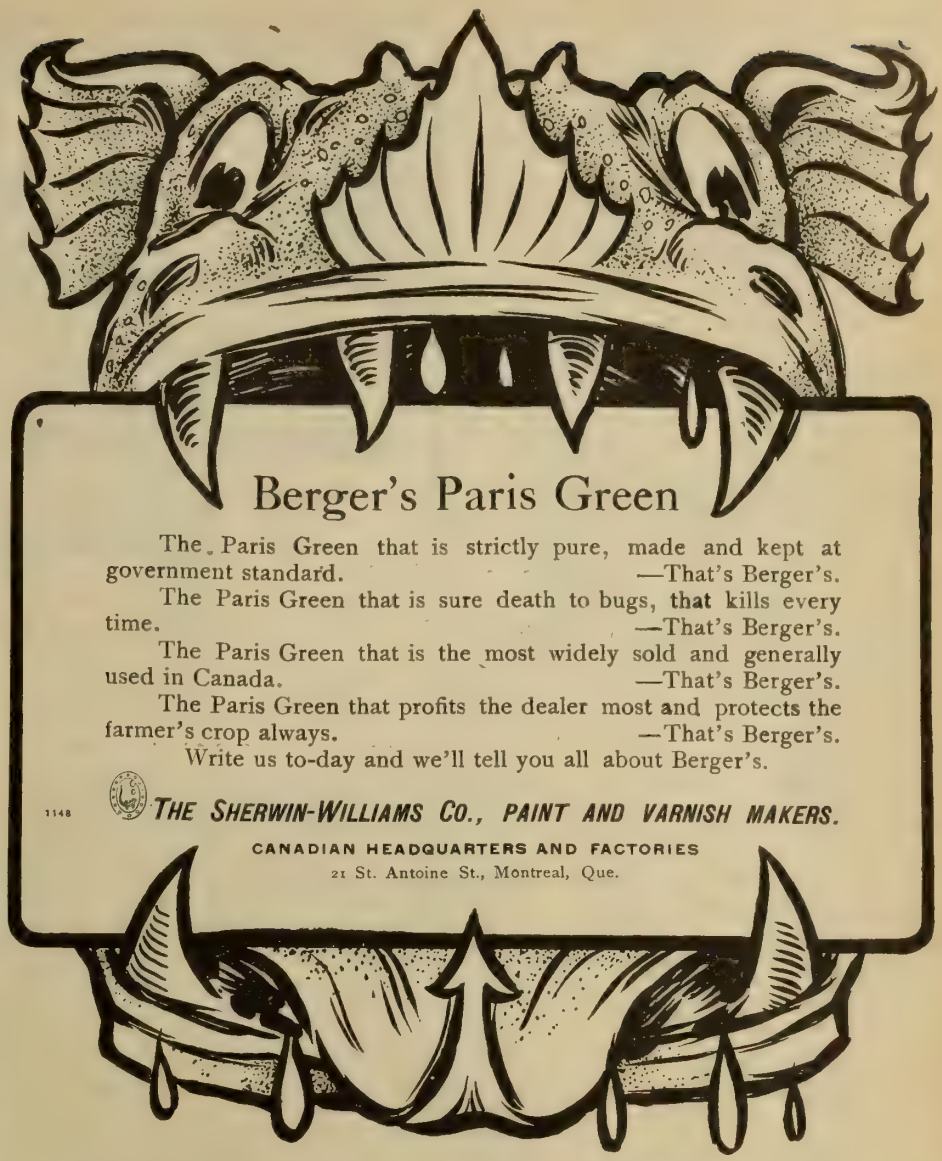
The year 1904 is already remarkable for the great number of handsome calendars prepared in its honor. Each calendar that comes to hand seems handsomer than the last. Lockerby & McComb, 65 Shannon street, Montreal, have every reason to be proud of their 1904 calendar, which is bound to be popular. It would be an ornament to any office or shop on account of its artistic qualities. No matter how many calendars you have already received write for this one.

OFFICE FIXTURES.

The George B. Meadows Wire, Iron and Brass Company, Toronto, are sending out seasonable greetings, the feature of which is an interesting view of bank fixtures "made in Canada" by that company. The fixtures are both artistic and practical and are a credit to their makers.

SPORTING CALENDAR.

The Dominion Canister Co., of Dundas, are sending to the trade an exceedingly attractive calendar—one that those with a love of gunning will feel like preserving framed. A brace of ducks, suspended from a nail, reproduced in colors, constitutes the design. "Hardware" acknowledges receipt with thanks.



Business Changes

ONTARIO.

J. Reid & Co., general merchants, Thorton, have assigned.

I. Doane, wagon maker, Stratford, has assigned to R. Burritt.

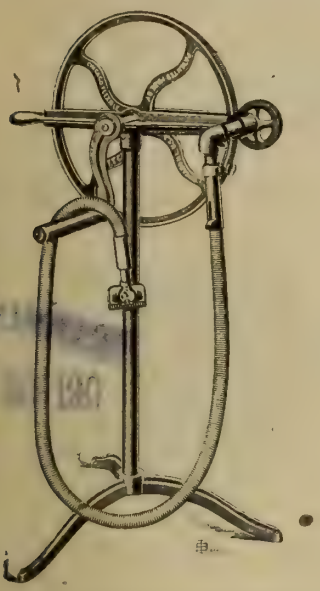
WHOLESALE ONLY 37-39 West Front Street, **Toronto.** **ONLY WHOLESALE**

THE CHICAGO CLIPPING MACHINE, &C.



Knife suitable for "1902" and "20th CENTURY" Clippers.

THE "20th CENTURY CLIPPER."

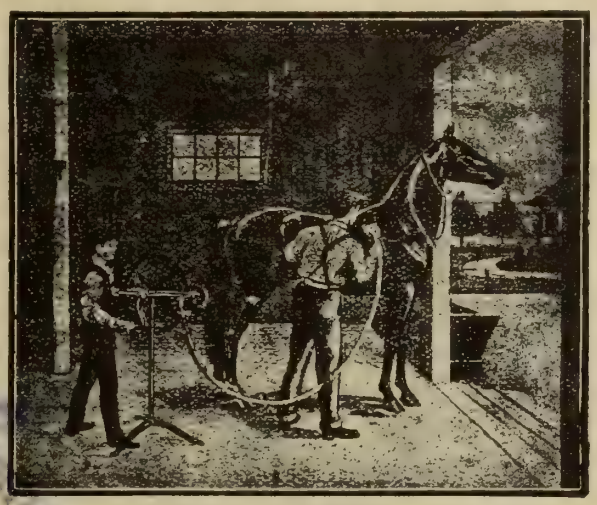
Is it any wonder that the demand for the new "20th Century" clipper is enormous? Why, it gives a customer a machine for a little more than the cost of a hand clipper.

A time and money saver that does a hundred times the work and does it much better.

It hangs up, giving the operator elbow room and facility.

Runs easy, cuts fast, requires no experience to operate.

It only weighs 15 pounds, and when Boxed is small enough for shelf goods (3 x 12 x 14 in.)



A clipped horse dries out from sweating in 20 minutes and can sleep without risk of getting cold.

"1902."

When it comes to quality, no other hand-power Horse-clipping Machine that is made anywhere by anybody, at any price, compares with the "**Chicago 1902.**"

Its construction is so simple, strong and fine; the only machine made that can be turned with the right or left hand.

All the gearing is cut from solid metal. It stands on a firm rigid base. No belt to slip, positive power.

The Machinery Markets.

TORONTO.

THE quiet feeling which generally predominated the machinery market last week, continued on into the present week, but during the last few days things have been picking up to some extent in most lines, and in some this increase has been very marked indeed. During the latter part of the week the demand for boilers and engines has been very good indeed. The feature of the market this week, however, is the remarkable run on saw-mill outfits. The machinery men are almost unanimous in saying that the number of orders and enquiries for saw-mill machinery, and indeed wood-working machinery of all kinds, including planing mill and shingle mill machinery, have been very marked. The demand for machine tools and machinery of a like nature remains steady. In the electrical machinery line, however, things are still very quiet, that is in actual business transacted. The number of enquiries have been large, as was the case last week, but so far this year the number of orders placed has been small. Of course this position of affairs is not at all unusual at this time of the year; indeed it is quite general, but considering that in other lines of machinery a departure has been made from the precedents of former years in that when things have been generally quiet, a good demand has been maintained, it is rather to be wondered at that the demand for electrical machinery has not been good in sympathy with the rest of the market. There have been numerous enquiries for gas and gasoline engines during the latter part of this week, and manufacturers and dealers say that there is a bright outlook for this class of engines during the coming year. The larger number of enquiries have been in regard to engines of from 1 1-2 to 4 horse-power, as a motive power on farms and for work of a similar nature. A general round-up of the market shows that things are much as was expected. Enquiries have been quite numerous, they being in some lines more numerous than last week, and orders are beginning to be placed. If business turns out as is generally predicted we may expect a busy Winter in the machinery line.

The A. R. Williams Machinery Co. report that the market is much the same as last week in that enquiries have been very numerous and not very many orders booked. This has reference to the market in general, and not to boilers and engines nor to wood-working machinery. They say that the demand for engines and boilers, especially boilers, has been very good, they having made several installations during the week. Among these were several American boilers, but the majority were Canadian. They report that the feature of the week is the good demand for saw-mill outfits, the greater number of enquiries and orders coming from New Ontario and Manitoba. For machine tools nothing very much can be said except that there have been a number of enquiries.

The Levy, Weston & McLean Machinery Co. report that the demand for saw-mill and shingle mill outfits has been active this week, indeed they think it is somewhat surprising. Also wood-working machinery of nearly all kinds is finding a good sale. Boilers and engines also hold a prominent position on the market this week. There is not much doing in the other lines, although there have been not a few enquiries.

The H. W. Petrie Machinery Co. say the market is much the same as last week, in that business consists chiefly of enquiries of which there have been even more than last week. However, during the last two or three days orders have begun to come in, and they expect that the business of the year has commenced. After this week business will assume the proportions that have been predicted. The demand for boilers and engines has been good this week, but it has not been at all remarkable.

Mr. Bertram, of the Bertram Engine Works, says that the demand for engines and boilers at the present time is very good. They have contracts on hand that will keep their plant in full operation for some months. He says that everything promises a continuance of the good market for engines and boilers throughout the year. This is specially true with respect to boilers.

Mr. Jeffery, of the Polson Iron Works, says that they are quite busy at the present time, all departments having as much to do as can be conveniently handled.

The Jones & Moore Electric Co. say that the market for dynamos and motors still remains quiet, and its features are similar to those of last week. They have been receiving numerous enquiries, but have not succeeded in booking many orders of importance. They are now working on orders placed during December and the non-arrival of new orders is not affecting the factory to any great extent.

The Dominion Motor Machine Co. have had numerous enquiries for their new gasoline engines, which they are putting on the market at the present time for use on farms, during the week, and they expect that there will be a good demand for them during the year. They have considerable automobile repair work on hand, the repair of several having been completed.

The Consolidated Electric Co. say that orders and enquiries have been coming in very well indeed during the week, which is exceptional to the general market for electrical machinery. They say that during the past two weeks they have installed a large number of dynamos for small lighting plants. The demand for motors has also been very good. They say they have not felt the general depression in the market in the least. As a result of their increasing business the Consolidated Company are looking for a larger plant than their present one on Court street.

MONTREAL.

The turn of the year has not as yet had very much effect on the volume of actual business. It was not expected, however, that buyers would rush into the market immediately after changing calendars and most machinery men seem fairly well satisfied with the prospects for 1904. Actual business this week seems to have been confined almost entirely to wood-working machinery and

machine tools of various kinds. Some good business (for this season of the year) is reported by several Montreal houses. One or two small sales of boilers and engines have also been made early in the week. Most of the sawmills on the Ottawa are said to be still closed, the men not having recovered from the festivities of the holiday season. For this reason business which ordinarily is good at this time of the year with all these buyers is dead at present.

A large number of enquiries are reported this week and a number of sales seem likely to be made before long. There is, however, a disposition on the part of buyers to delay their purchases in the expectation of a drop in values. There is nothing in the Canadian situation to justify any such expectations, but reports of a dull machinery market in the United States have created a feeling of uncertainty in this country. There is, however, a growing feeling that the set-back to business in the United States can be regarded only as temporary as at bottom the condition of the country has remained sound. It is argued that the temporary set-back has really been beneficial as it resulted in a check to the unwise aggressiveness of labor which had become a menace to sound industrial conditions. The year 1903 has left to 1904 a vast amount of projected and unfinished work, and, unless the unexpected happens, the United States should have a prosperous year. Eliminate the danger of a slump in values in the United States, and conditions in Canada can not fail to be satisfactory.

At the same time, it is quite true that American machinery houses are paying particular attention to the Canadian market just at present and there are this week in Montreal and vicinity an unusual number of American machinery men. Their presence here is having an unsettling effect on business for although it does not appear that they are offering any startling price concessions they are at least preventing buyers from placing their orders. A number of large orders for machine tools will be given very soon and unless concessions are offered by American travellers they are likely to go to Canadian houses. The failure of the James Cooper Mfg. Co. and the embarrassments of the Locomotive and Machine Company do not seem to have had any appreciable effect in keeping out United States competition.

A number of English houses have also sent their representatives to Canada to work this market and they have succeeded in doing some business. A prominent machinery agents said to "Hardware and Metal" that he was considering the advisability of taking some new English agencies. The only obstacle was the constitutional unwillingness of the English manufacturer to change the patterns of his goods to suit the requirements of new markets.

The Fairbanks Company report actual business this week as not particularly active but from the number of enquiries received they believe that prospects for the new year are bright. A great many buyers are busy stock taking and are not anxious to place any orders for a few weeks yet, but they will be on the market before very long and are now making enquiries as to price. Actual business this week has been, for the most part, in machine tools.

The Laurie Engine Company report business in engines of large and small horse-power quite up to the usual standard. Trade in engines and boilers does not depend very much upon the season of the year and this year it was almost impossible to close down for legal holidays. Prospects for engines and boilers are regarded as very good. In machine tools and wood-working machinery business is quiet at present.

Mr. W. H. Nolan, of the Canadian Machinery Agency, finds actual business this week fairly satisfactory and judging from enquiries received he believes that 1904 will be a prosperous year in the machinery business.

Mr. Alfred Rubra, of the Machinery Exchange, reports some improvement in this week's business. For the season of the year, he considers business this week very satisfactory and enquiries received point to good trade later on.

Williams and Wilson report a quiet but satisfactory trade this week. Business this week shows some improvement over last and enquiries coming in point to a satisfactory trade later in the season.

NEW YORK.

The Iron Age says of the New York market: Scarcely enough time has elapsed since the first of the new year to furnish any indications as to the disposition of prospective purchasers to throw off the hesitancy which has characterized their attitude toward the market of late. It was not expected that they would rush into the market immediately after changing calendars, and hence the trade does not attach especial significance to the quiet conditions which existed throughout the week under review. Even though the greatly anticipated appropriations were made at the annual meetings, some time will be required before any appreciable effect can be felt in the trade.

Large Bridge Span.

THE accompanying cut is that of a large bridge span recently shipped from the bridge shops of the Canada Foundry, Toronto, to the Newport division of the C.P.R. What makes this of interest is the fact that it is the largest bridge span ever constructed in Toronto. The length over all is 85 feet 4 inches; the depth, 8 feet 4 inches; and the total weight is 84,240 pounds, that is 240 pounds over 42 tons. This is the second large bridge span turned out by the Canada Foundry for the C.P.R. within the last three months, the other one being not very much behind the one here illustrated.

A 42-Ton Bridge Span, made by The Canada Foundry Company, Toronto.

Bought a Planing Mill Plant.

R. E. MICKLESBOROUGH, implement dealer, and Mr. Mickleborough, general merchant, Regina, N.W.T., were in Toronto this week. Mickleborough Bros. are starting a planing mill at Regina and have been placing orders for machinery, equipment, etc. Their principal order, for machinery, etc., to the value of over $4,000 was placed with the Levy, Weston & McLean Machinery Co. The order includes a Wheelock engine and boiler, a planer and matcher as well as other woodworking machinery.

SYRACUSE SMELTING WORKS

MODERN PRACTICE OF PATTERN MAKING.

MORE and more attention is being given to the practice of pattern making. The following extracts from papers on the subject, ready by J. C. Warne and E. C. Fitzgerald, before the Pittsburg Foundrymen's Association, cover the essentials of the practice as it is now carried on.

KINDS OF WOOD USED.

White pine is almost universally used in the making of wood patterns, it being well adapted in its nature for such service. It is light, easy to cut, permits of a nice finish, retains its shape, does not warp or twist, like other varieties of fir woods and, if properly taken care of, will stand a good deal of wear, especially if wrapping plates are provided. Yet while on account of its comparatively low cost, white pine is used almost universally for making wood patterns, as was before stated, it is not the most suitable for such purposes. Of all woods mahogany is the best, partaking of the nature of both hard and soft woods. It is practically impervious to damp and, therefore, is certain to retain its original shape. Its high cost, however, restrict its use to very special patterns.

Among the hard woods cherry is most suitable for pattern making. It retains its shape fairly well, is not so hard to cut as the other hard woods, makes an excellent finish and stands ordinary wear and tear admirably. Patterns of white pine faced up with cherry in the wearing parts will last for years under the hardest kind of service if kept well varnished.

All lumber used in pattern work should be well seasoned, the naturally seasoned being much better than kiln dried. For standard patterns it will be found economical to use the best lumber. It is no economy for the pattern maker to use in his work lumber from which the water oozes out in front of the chisel or flies about when turned in the lathe.

The best finish on wood patterns is obtained by the use of the best gum shellac and grain alcohol, but the standard article used for finishing is gum shellac varnish.

Leather fillets are now used very largely, and are very suitable for a quick job. However, for the best permanent pattern work there is nothing to surpass the wood fillet. Fillets of putty are also frequently used. They are easily put in and are inexpensive, but time must be given for the putty to harden; when varnished over putty forms a permanent, hard fillet.

MACHINERY EMPLOYED.

At the present time machinery plays a most important part in the pattern shop, although that was not the case 30 years ago. Then a circular rip saw, a band saw and a lathe were about all machine shop tools to be found in the ordinary pattern shop, hand work was then a very large factor in the production of patterns. Now most pattern shops are, and all should be, equipped with the best machinery obtainable for the class of work required.

The jointer is a most useful machine and a great labor saver. This machine should plane absolutely true, so that work can be glued up straight from the machine. It should take the place of the hand jointer plane from which it derives its name. A good band saw with wheels not less than 36 inches in diameter, provided with a tilting table is also a very desirable machine. A small and large wood turning lathe should be provided, also wood trimmers, a universal circular saw table and for large shops a swing cut off circular saw. The pony planer and surfacer are valuable machines for dressing the lumber to the required thickness and shape.

The band saw, with its tilting table, can be so adjusted that irregular shapes may be sawn to the line, thus dispensing with much hand labor as would be necessary without such a tool. The modern universal saw, with its many adjustments, saves time and material. For instance staves for barrel shaped patterns can be sawed just to the angle without any waste. This saw can also be used for making butt joints in sedgement work by fastening a form to the sliding table and using the cross-cut saw. It is also a great help in roughing out round core boxes.

ASSEMBLING.

After the material has been cut and shaped to convenient size for assembling the pattern it should be put together in a manner to offer the least resistance to the extraction from the mold. Where there is great depth and comparatively little draft it would be the best arrangement to have the grain of the wood run at right angles with the line of parting or on a line with the left. In extra heavy work, such as plates and bases for blowing engines, the most feasible form is to have the patterns made in sections, with guide strips so arranged that when assembled in the pit, all parts adjust themselves to their proper position. This relieves the strain on the pattern in drawing from the sand since each piece can be drawn out separately. Patterns for pipe fittings are now made with flanges, branches and core prints interchangable. This is an excellent plan, as it makes a comparatively few patterns cover a wide range of sizes and shapes and overcomes to a certain degree, the old method of patching, here and there, with pieces to get the size of casting wanted.

Work should be screwed rather than nailed together where it is convenient to do so. Where glued joints are required hot glue is the best to use except in the case of thin wood where the cold prepared glues are probably the best, since the hot glue would tend to swell the wood which, upon drying, would change its shape.

There are a class of metal dowel pins on the market now which are a very great improvement over the old wood pins for parted patterns.

FINISHING.

The amount of time and labor to put upon the finishing of the patterns should be governed by the number of castings to be made from them. All patterns should be coated with shellac, varnish or some such preparation to protect them from the moisture and to give them a hard, smooth surface; and those in use regularly should be revarnished from time to time.

REQUIREMENTS OF A PATTERN MAKER.

Accuracy should be the first law of every pattern maker. Speed is also a very important factor, but it should always be kept subordinate to accuracy. In pattern making there must be ability of high order shown. The maker should have a knowledge of drawings; he should be able to read them truly and quickly; he should be no mean draftsman, and the more his mathematics and knowledge of mechanics are developed the more fitting person will he be for his position.

Transmission of Electricity.

THE rapid approaching completion of the power houses in course of construction at Niagare Falls, is drawing much attention to the problem of long distance transmission of power, which problem must be mastered before the electricity generated from the Niagara will be of practical utility in Ontario municipalities.

For this reason an article by Hamilton Wright on "Power," referring to the Bay Counties Power Co., Stockton, Cal., as the longest system of electric transmission in the world, is both instructive and readable. This transmission is 219 miles in length being from Stockton to Oakland and San Francisco. This company also have their lines extended up the coast to Burlingame, a distance of 211 miles from Colgate, where the energy for that line is generated. The second longest system is that of the Standard Electric Company, also in California, the transmission being 200

miles in length. The power is generated by water power obtained from the Mokelumne River, 40 miles below the Blue Lakes. Only within the last few months this company have established lines to Oakland, a distance of 122 miles, and to San Francisco, a distance of 146 miles, and are transmitting 15,000 horse-power, at 60,000 volts.

Electricity in mining is proving of immense value, especially for gold and silver mines in the desert regions, where water is precious and fuel is costly.

In Canada there are wide possibilities for the utilization of the power in our streams and rivers for industrial purposes. From all indications at the present time the energy of the electric current is going to play no mean part in keeping up and increasing the rapid development of Canada's industries. Of course this electrical energy will be generated in the least expensive way, and with that end in view the energy gained by running or falling water will be utilized wherever possible. As an instance of this only some weeks ago the Dominion Government decided to send expert electricians to Europe to investigate the process of smelting ore in the electric furnace, so that, if the process prove commercially feasible, the iron ore deposits in certain parts of the province of Quebec, where there is no coal, but where there are numerous streams and rivers, may be developed by means of electrical energy generated by the water-power of these streams.

Craig Mine Crystal Corundum

CRYSTAL REGISTERED TRADE MARK CORUNDUM

NOT ADULTERATED WITH EMERY.

Polishing is fine grinding. Craig Mine Crystal Corundum grains will do from two to five times the amount of grinding or polishing that grains of emery will do, *because* it all grinds. Emery contains only 30 to 40 per cent. of grinding value, the remaining 60 to 70 per cent. is composed of iron and silica—waste material.

STOVES AND TINWARE.

Get After Stove Trade.

NOW when business is slack is the time to get out and hustle. There are many lines which offer good returns for such enterprise. Among these stoves are worthy of considerable attention. Many householders need to be convinced that they should get a new stove; that an old, out-of-date one is a cause of loss, using much more fuel to do the same work than does a new stove of good pattern.

How can these people be reached? Many hardwaremen content themselves with drawing the attention of buyers by advertising. Some try window display to interest the public. Others, again, issue circulars for distribution to their customers. An increasing number of stove dealers are, however, more insistent. They make a point of personally interviewing everyone whom they feel might possibly be persuaded to get a new stove. All the plans, and particularly the latter, are well worth trying.

Soldering Flux.

FROM a series of articles by John Foggie, F.C.S., on "Experimental Science for Plumbing Students," appearing in The Plumber and Decorator of London, the following is taken: Sal ammoniac is a substance frequently used as a flux in soldering copper, brass, etc. It is a chemical compound, built up of the two gaseous substances, ammonia and hydrochloric acid. If a glass rod be moistened with spirit of salt and held over a vessel containing ammonia solution or gas, dense white fumes of ammonium chloride will be produced. It is a substance which, under ordinary circumstances, does not liquify on heating, but undergoes what the chemist calls "dissociation"—that is, it splits up into the two gases above mentioned, and when these reach a colder part of the vessel, or escape into the air, they recombine to produce sal ammoniac.

Its action may be shown by the following experiments: Heat a strip of clean sheet copper or brass over a Bunsen burner. If the heating be done slowly and carefully it will be observed that a red color is at first produced. This is in all probability the lower oxide of copper Cu_2O. If the heating be continued, a black coating, as we have already seen, of the higher oxide (CuO) is finally produced. This may readily be separated from the copper by squirting a fine stream of water on it while hot, catching it in a saucer. Pour off the water and add a few drops of strong hydrochloric acid. The oxide will disolve, readily forming a yellow solution of cupric chloride $CuCl_2$. If water be added it will become colorless, or, if the solution is a strong one, perhaps faintly green. To this add a few drops of ammonia solution, when a blue color will be produced, indicating that the black substance dissolved was really a compound containing copper, as the ordinary salts of copper always give this color reaction with ammonia.

Now, on a clean piece of copper produce again this black oxide. While hot, sprinkle on a few grains of sal ammoniac and note what occurs. Wherever a tiny crystal touches the hot oxide it disperses it immediately, and the clean surface of the copper at once appears. The action then may be briefly indicated as follows: When the temperature is sufficiently elevated for the splitting up of the sal ammoniac already refered to (being about 120 degrees C.), the hydrochloric acid, being liberated "on the spot," so to speak, at once attacks the oxide, with formation probably of both the chlorides of copper. This is at once attacked by the free ammonia and excess of ammonium chloride, and converted into what are called "double chlorides of ammonia and copper," which substances are volatile and go off in the escaping vapor. This may be proved by holding a Bunsen in the fumes an inch or two above the metal, when the flame will at once be turned a bluish green, indicating that volatile copper compounds are present.

It is a very difficult matter, however, to follow actions such as this at high temperatures, but the above may be taken as pretty near the truth. The main fact to be borne in mind here also is that the oxide is removed by chemical means, and a perfectly clean surface presented to the solder. The sal ammoniac possessing this high temperature of dissociation also ensures that the metal is effectively protected from the oxygen of the air during the soldering operation. Zinc chloride, $ZnCl_2$, is one of the most valuable of fluxes, and is used for copper, brass and iron. It is sometimes mixed with sal ammoniac for use in soldering, but it acts well of itself. The solid melts about 260 degrees C., and, unlike sal ammoniac, is not volatile until a low red heat is reached. This property enables it to coat the surface to which it is applied as a fused mass, and thus prevent access of air at the temperature of the molten solder. It is a substance which takes up water and absorbs oxygen readily, which latter property renders it valuable in this connection. To illustrate its cleansing property, coat a strip of copper with oxide as before. While hot, rub over it a piece of solid zinc chloride, when it will be found that the oxide will be completely removed and the bright metallic surface exposed.

A similar experiment may be performed, using iron instead of copper. Take a piece of 1-in. hoop iron; file about 1 inch clean, and hold in the Bunsen flame till covered with a film of black oxide. Rub on as before a piece of the solid flux, keeping the iron still hot. After a minute, plunge into cold water, when a perfectly clean unoxidized metallic surface will be the result.

It has been stated that iron thus treated is coated with a thin film of zinc, which easily alloys with the solder.

Have you tried it?

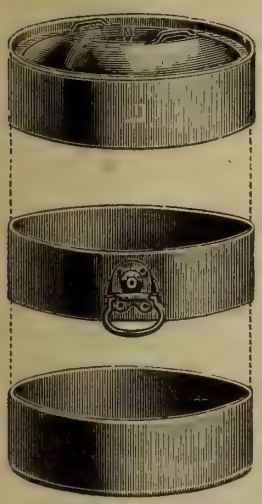
DAVIDSON'S

MILK CAN TRIMMINGS FOR 1904.

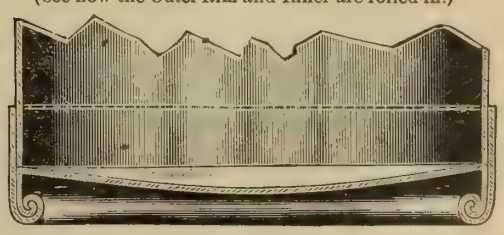


BROAD HOOP PATTERN.

This demonstrates the popularity of

Davidson's Patent Milk Can Bottoms

(See how the Outer Rim and Inner are rolled in.)



SECTION OF BOTTOM.

You should buy our Milk Cans and Trimmings, because: our Broad Hoop Bottom has all the advantages of a seamless bottom without the strain that spinning entails. The rim is turned in with edge of bottom, giving double durability and heavy rolled edges that will not tear factory floors nor waggons.

They have no air spaces (which make soldering difficult) but sufficient space is left between bottom proper and rim to allow body of can to be inserted ¼ of an inch, making permanent joint.

Bottoms are thus sweated in with half the solder.

Bottoms are concave, draining to the centre, therefore are easier to wash out.

They will not corrode like those which drain to the side. They have flush side handles.

Top bands are "SHOULDERED" and have cut out at joint, making neater and cleaner job in half time than with old style hoop.

Bottoms are rivetted to bottom hoop, as well as being rolled together.

All bands have retinned edges.

For durability, finish and economy in making up, our Trimmings are unequalled.

Cable Address { Adscript, London. Adscript, Canada.

PROSPEROUS CANADA.

REMARKABLE evidence of the prosperity now prevailing throughout Canada is evidenced in Bradstreets of January 9th. A summary of the failures which have been recorded each year in Canada since 1880 shows that in 1903 but 956 Canadian firms suffered failure, liabilities aggregating $8,328,362 and assets $3,852,197. This is a decrease in number of 12 per cent. from 1902 and is the least number since 1882.

A further evidence of prosperity is noted in our bank clearings which for ten cities aggregated $2,646,974,767, a gain of 5.2 per cent. over 1902, and to this extent the best ever recorded. In connection with this it must be remembered that the demoralized condition of the stock market must have seriously affected the bank clearings, so that our industrial prosperity is by no means adequately represented even by the bank clearings.

To emphasise this it should be noted that the total bank clearings in 92 United States cities aggregated $108,691,335,283, a decrease of 7.4 per cent. on 1902 and 7.7 per cent. on 1901. This decrease is found to originate in New York the centre of the stock operations, the outside cities marking an increase.

It is most gratifying indeed to find that despite the hard knocks Canadian securities have received during the past year at the hands of American bears we are still in a position to make so favorable a showing.

The inference is flattering to our industrial and commercial stability.

TO FIGHT TRADING STAMPS.

THE Merchants' Association of New York are issuing a circular appealing to the trade to co-operate in a determined attempt to secure the passage by the New York Legislature of a bill to regulate trading stamps in such manner as to abolish ther present harmful effects.

Canadan merchants will sympathize with the trade in this attempt. The trading stamp evil was but a few years ago such a pernicious influence in business conditions that it was found an easy matter to secure practical unaninnity in the movement to have them abolished, in Ontario particularly. The agitation against the stamps was started by the MacLean Trade Newspapers and the movement to secure legislation against them originated in Brockville. Delegations from all parts of Ontario met in Toronto and interviewed the Government in a body. This, together with a short but powerful lobby, was sufficient to win the almost unanimous support of members of the Legislature, which resulted in the passage of an act which has been so effective that trading stamps are a "thing of the past" in the province. May similar success attend the efforts of the New York Merchants' Association.

STOCK FOODS FOR HARDWARE STORE.

HARDWARE & METAL has been a consistent believer in and advocate of the principle that hardware merchants should make it their practice to carry as many lines of specialties as can be carried to advantage.

At this season of the year, when regular business is less active than usual, the retailer has more time to plan business-increasing campaigns for the year and to find out what lines not being carried could be advantageously added to his stock-in-trade.

Recent years have demonstrated the suitability of many lines of specialties for the hardware trade. One of these lines is stock foods. There is a large and increasing demand for these foods in all parts of the Dominion where stock-raising has become one of the chief interests of the farming community.

Inasmuch as the real success of stock raising is dependent on the attention devoted to it, stock foods can be depended on to interest the average farmer; and, moreover, can be depended on to yield a good profit to the hardwareman as the margin of profit is considerably larger than that of regular hardware lines.

PRICE CHANGES OF THE WEEK.

THE advances this week are both due to rising prices in the country of production, the United States. The increase of cotton quotations has lead to another rise of 2c. in sashcord prices. Turpentine has been marked up 6c. per gal. as a result of manipulative advances in the Savannah market. This change puts prices of turpentine on the Canadian market fully 10c. above the quotations ruling this week last year.

THE LATE W. H. LINDSAY.

IT is with feelings of the deepest sorrow that we have this week to record the death of Mr. W. H. Lindsay who was taken off with such terrible suddenness while removing snow from in front of his residence at London on Friday last. Mr. Lindsay had been for some time connected with the staff of the MacLean Trade Newspapers and was held in the highest esteem by all those connected therewith as he was, indeed, by all who knew him.

Mr. Lindsay had a long business career in Milton and his loss will be widely felt. He was a fine example of the gentlemanly type of a business man, a type of man whose loss we feel keenly. A widow and several sons and daughters survive, to whom we extend our heartfelt sympathy in their bereavement.

A TRADE UNION ABSURDITY.

FROM St. Louis came, some little time ago, a story which surely illustrates the climax of trade union absurdity. As is well known, the management of the Exposition are paying particular attention to the art features of the Fair. For example, the sum of $500,000 has been appropriated for the display of the work of American sculptors, and a great number of artists have contributed under the direction of Mr. Karl Bitter, the chief of the sculpture department. As many of these pieces of statuary are of colossal proportions, they are transported to St. Louis in sections and the work of setting up necessarily requires some considerable skill. It often happens that the pieces are damaged en route and need remodelling, as do the joints where the sections meet. Surely it is evident that to place this work in the hands of unskilled persons is to run the risk of spoiling the sculptors' work. Enthusiastic young artists have worked in poverty inspired by the hope of achieving fame and distinction by their work and upon the verdict of critics and public depends their immediate future. To spoil their work in setting it up would be an injustice to them, and render useless the vast expenditure of money by the management on these artistic features of the Exhibition.

Now the management of the Exhibition were careful not to wound the feelings of organized labor. The work of setting up this statuary was assigned to the best sculptors of the St. Louis Modellers' and Sculptors' Union No. 245, thereby recognizing the claims of organized labor and at the same time seeking efficiency.

But this action was not in harmony with the principles of organized labor as understood in St. Louis. A union had been recognized, but it was not the right union. The statues are modelled in plaster and forsooth the proper men to set them up are the plain plasterers of St. Louis. The Plasterers' Union notified the Exhibition authorities that this work must be turned over to them, at the same time threatening a general strike of the Exposition workmen unless the demand were complied with. Meanwhile the plain plasterers ceased their work on the buildings.

The dispute was referred to the Director of Public Works and his common sense decision was in favor of the claims of the Sculptors' Union. This finding not being satisfactory to the plasterers was ignored as completely as the similar verdict of the Missouri State Board of Arbitration to which the dispute was then referred. This body went into the whole question carefully, listening to the representations of the Plasterers' Union and to the case of the Sculptors' Union as presented by the Exposition authorities. The finding being adverse to the Plasterers' Union they refused to be bound by it.

In despair Mr. Bitter, the superintendent of sculpture, at last addressed an appeal to the general president of the Operative Plasterers' International Association of the United States and Canada, Mr. J. B. Cavanaugh, of Colorado Springs, Colorado, in which he set forth the case plainly and fairly and appealed to the common sense of this august personage to interfere in his behalf. He waited more than a month for a reply and when received it was a curt notification to the following effect:

DEAR SIR,—The following decission was sent to this office by the General President of the O. P. I. A. That plasterers shall do all pointing, and to notify locals. Locals referred to are No. 245, which is composed of modellers, No. 242 composed of shop hands, and No. 3 which is composed of plasterers. Said notice has been sent. Trusting that the above decission will end controversy, I remain, W. A. O'KEEFE, Sec'y-Treas.

This is perhaps a fair sample of the curtesy for which employers may look at the hands of some labor leaders.

What has not the union done for the laboring man? Long ago it was claimed that it would give him shorter hours, increased wages, and greater consideration in the eyes of the world. Skilled labor, we were told, would rise in the social scale under the protecting aegis of trade unionism. But not its most ardent and enthusiastic advocates a half century ago would have ventured to prophesy that so soon would unionism have accomplished the hitherto impossible task of democratizing art. Let the name of J. B. Cavanaugh of Colorado Springs be held in all esteem. By one stroke of his pen, this mighty potentate of unionism has placed the members of that union of plain plasterers on the same plane as the most noted artists of the New World. Adams, Ruckstuhl, Bitter and MacMonnies are now brothers to the distinguished artists of the Plasters' Union No. 3. Many are the triumphs of science and of art which the wondering visitor at St. Louis next Summer will stop to admire. But surely nothing is more worthy of his admiration than the latest triumph of the plain plasterers in plastic art.

If you would do what you could —in advertising,
You could do what you would —in business.

HONORED BY THEIR TOWNSMEN.

MANY business men were honored at the Ontario municipal elections with the selection as Chief Magistrate in their town or city. Among those in which HARDWARE AND METAL readers are interested are :

Adam Beck, lumber merchant, Mayor of London.

W. W. Chown, hardware merchant, Mayor of Belleville.

F. M. Devine, hardware merchant, Mayor of Renfrew.

A. W. Humphries, hardware merchant, Mayor of Parkhill.

W. Lawson, carriage manufacturer, Mayor of undas.

M. S. Madol, saw miller, Mayor of Napanee.

S. L. McKay, hardware merchant, Mayor of Kingsville.

W. E. McKeough, foundryman, Mayor of Chatham.

W. H. Plummer, general and hardware merchant, Mayor of Sault Ste. Marie.

D. Wilson, planing miller, Mayor of Collingwood.

C. W. Winslow, builder, Mayor of Dunnville.

A RETAIL HARDWARE DEALER'S CIRCULAR.

DECISION of character is one of the best assets that could be possessed by a business man. The larger the business interests, the more valuable this asset, but its value is obvious whether the interests be great or small.

HARDWARE AND METAL has frequently suggested that the retail trade insist on prompt payment. It seems clear that the era of short credits has dawned, that retailers have learned the wisdom of insisting on prompt payments, as well as of making prompt payments themselves.

From D. Brocklebank, retail hardware dealer, Arthur, Ont., comes to hand a circular, such as might be issued by every retail hardware dealer in the country. On the first page of the circular were greetings for 1904; on the fourth page an interesting list of the lines carried. The inner pages, the second and third, are the ones, however, which are worthy of attention.

DEAR FRIEND,—At the closing of the old year we wish to thank you for favors and patronage, and as the new year opens to solicit your continued favors for 1904.

We trust that the old year has crowned you with success, that you have something substantial to show for your labors and that you have plenty of health and energy to enter upon the work of 1904.

We are pleased to announce that 1903 has been a banner year in our business. It is, indeed, great satisfaction to see each year better than the one before, and we naturally look for the reasons. We believe there are several. Years ago we framed a motto: "Not how cheap, but how good." Customers have appreciated our efforts to sell only reliable goods at right prices. Then the bringing of so many lines of merchandise under our roof has reduced the cost of selling and has enabled us to always meet and usually undersell our competitors. Our long experience enables us to find the best place to buy and we buy in large quantities for cash. These reasons, coupled with a resolution to deal fairly with all men, has, we believe, been responsible for our growing business.

During the past year manufacturers and wholesale hardware people have shortened the terms of credit, shortened them so that by the time we get goods unpacked and marked the bill is due. Our business has become so large that we can no longer pay cash for goods and carry our customers' accounts to the end of the year. Our capital will not permit it and we are forced to adopt the cash system, that is cash or note. In special cases such as a person building, we will allow short credit, but in all cases accounts must be settled by cash or note every three months, viz., on the first days of April, July, October and January. Under no circumstances will this rule be violated.

When you have carefully considered this matter, do you think it is reasonable to expect a merchant to loan you goods for a year (which is the same as money) and receive no consideration for the same?

Possibly you have never asked credit at our store; in that case our terms will not interest you. It will interest you, however, to know that for 1904 we are planning for bigger business, better service, and, where possible, lower prices.

On January 1st we opened a new ledger. We want to close every account by the 15th. Enclosed find note at three months for the amount of your account, $....., bearing interest at 8 per cent. per annum. Kindly give this your prompt attention.

Again thanking you for past favors, and wishing you 366 days of good luck for 1904, I remain,

Respectfully yours,
D. BROCKLEBANK.

The argument that the shortening of credits by wholesalers and manufacturers necessitate quick collection of accounts by retailers than formerly is one that can and should be made by hardwaremen in every section of the country.

WAYLAND WILLIAMS.

MR. WAYLAND WILLIAMS, whose portrait we reproduce below, is is one of the latest additions to the ranks of the Montreal manufacturers' agents, but he is a man who scarcely needs any introduction to Montreal business circles, as for 12 years or more he has been favorably known throughout the city. Mr. Williams is now making an independent business venture after a record in postions of trust under large firms of which any man might be proud.

An Englishman by birth, Mr. Williams had five years' experience before coming to Canada with the Patent Nut and Bolt Company of Birmingham, now

Mr. Wayland Williams.

Guest, Keen & Nettlefolds. On coming to Canada, he was for some time in the service of the Grand Trunk Railway, with which he severed his connection to take the responsible position of secretary of the Laurie Engine Company, of Montreal. Mr. Williams has the good wishes of his former employers in his independent venture, and from them he holds letters of recommendation showing in what high esteem he is held by them.

Mr. Williams has been very fortunate in securing an agency from John Birch & Co., of London, England, one of the largest and enterprising firms for which London is noted. Our readers may remember a review in these columns last September of the magnificently illustrated catalogue issued by this firm, one of the finest ever published. John Birch & Co. have been in business for more than 25 years as buyers on commission and merchants selling on firm offer, engineering materials, supplies and stores, machinery, tinplates, Canada plates, pig iron, steel, wire etc. They export largely to India, China, Japan, Australia, South Africa, and have also a well established connection in Canada, buying for many Canadian firms.

Mr. Williams has secured offices at 26 St. Sacrament street, Montreal, and is now open for business. He would be pleased to secure agencies for Canadian and American manufacturers as well as English. In addition to the firm of John Birch & Co., Mr. Williams also represents the following firms:

Morrison & Ingram, Manchester England, sanitary engineers.

Roberts Patent Filling Machine Company, Bolton, England, filling machines.

Omega Odourless Gas Stove Co., Bristol, England, Omega Odourless Stoves.

A. Savy Jean—Jean & Co., Paris France, soap making and pharmaceutical machines.

Geo. Campbell, London, England, general merchant.

Allen & Son, Sheffield, England, cutlery and electroplates.

Mosely's cutlery, Sheffield, England.

A. C. Wells & Co., London, England, unbreakable industrial lamps, oil filters, painting machines, lime and color washing machines.

Imperial Tea Strainer Company, Montreal, "Never Drip a Drop" tea strainer. And some others.

Mr. Williams is also concluding arrangements to take an agency for Ad. Arbenz, of Lousanne, Switzerland, "Mandarin" razors.

INQUIRIES FOR CANADIAN TRADE

THE following were among the recent inquiries relating to Canadian trade received at the Canadian Government office in London:

1. A London contractor and importer is looking out for Canadian supplies of hemlock or pine railway ties and maple and hickory skewers.

2. A resident of Belfast claiming to have a good connection with the wholesale and retail trades in the North of Ireland, has requested to be furnished with names of Canadian exporters of bacon, cheese and butter.

3. A firm of manufacturers and publishers of chromo almanacs, show cards, etc., desires to hear from wholesale printers and stationers in Canada likely to take up their goods.

4. Inquiry is made respecting the possibility of opening up a trade with Canada in writing inks and a pure rice starch.

5. A West of England firm of brush manufacturers and dealers in woodenware are seeking supplies of broom and fork handles in basswood. They also import washing boards, clothes pegs and other similar woodenware.

6. A Belfast firm would like to correspond with Canadian exporters of produce, fruit, cheese, hams, canned goods, etc., with a view to selling these goods on commission among buyers in Ireland where a large and safe trade is to be done.

7. A well-known firm of glue manufacturers wish to get into touch with Canadian buyers of this article.

[The names of those making inquiries may be obtained from the Editor of THE CANADIAN GROCER.]

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, January 15, 1904.

Hardware.

THE weekly round of the wholesale establishments of Montreal shows that trade has not yet emerged from the stagnation of the holiday season. The travellers are all on the road again but as yet they have not succeeded in sending in many new orders. This is ascribed to the fact that numbers of retailers—perhaps the majority—are still stock taking and until this operation is concluded not much business can be expected. The most important price change since last issue is a drop of 15 cents per keg on cut nails, which are now quoted at $2.30 per keg, f.o.b. Montreal. Wire nails remain unchanged. There has been an increased business in barb and galvanized wire since the price changes recorded in our last issue were announced. Numerous orders for forward delivery have been booked during the last 10 days. It is stated on what seems to be good authority that there are now no American bolts and nuts being offered on this market. The better feeling across the line coupled with the higher discounts on Canadian made bolts has shut out American competition. In cordage, the chief interest seems to centre around all cotton goods. No further changes are reported this week, but prices as quoted are very firm. It is stated that Canadian manufacturers will not make this year any cheap two-ply half-inch and three-quarter-inch rubber hose. Supplies of this grade in the hands of the jobbers are not very large and it will be difficult to obtain this season. The cheapest will be the 3-ply in half-inch and three-quarter-inch hose. A special brand of this is being put on the market at 75 and 10 per cent. off list. Other grades will be firm, 10 to 15 per cent. higher than last year.

Spring Hinges—Trade is now opening up nicely, good orders being booked for forward delivery. Prices for this season are as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Wire Nails—No change was made last week in the price of wire nails. Trade is now very quiet, there being nothing doing except an occasional sorting order which is filled out of stock. The local mills are all closed down for stock taking and repairs to machinery. We again quote as follows: $2.40 per keg in carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

Cut Nails—A reduction of 15 cents per keg has been made since our last issue. It has been felt that in comparison with wire nails prices for cut nails were high. Trade is at present very quiet. The price is now $2.30 per keg f.o.b. Montreal.

Fence Staples—A few orders are being booked for forward delivery, but trade has not yet opened out to any great extent. The outlook for 1904 business is considered very satisfactory, particularly in Manitoba and the Northwest where more attention is now being paid to fencing and where it is expected that large sales will be made during 1904. We quote the following prices: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c extra.

Pressed Spikes—The discount is 25 per cent.

Horsenails—There is very little activity at present. Prices are unchanged and we again quote the following discounts: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—There is nothing of interest to note this week. Trade is quiet. We again quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.ob. Montreal onlv.

Sleighbells—A few sorting orders are still being received, but trade is quiet after the rush which preceded the holidays. We quote as follows: Back straps, 30c. to $2 each; body straps, 70c. to $2.50 each; shaft gongs, 2 bells, 20c.; 3 bells, 35 to 60c.; 4 bells, 55c. to $3 each; brass team bells, No. 1, $1.90 per dozen; No. 2, $2.40 per dozen; No. 3, $2.70 per dozen; No. 4, $3.70 per dozen; No. 5, $4.65 per dozen; York eye bells, No. 10, $1.35 per dozen; No. 12, $1.65; No. 14, $1.90; saddle gongs, $1.10 to $3 each.

Skates—There is now little activity in the wholesale trade. Except for a few sorting orders there is nothing doing in skates at present. A number of sizes have been almost entirely sold out and are difficult to obtain. Our quotations are as follows: Halifax pattern, 37c. per pair; nickel-plated, 65c.: ladies' nickel-plated, 55c. to $1.25; ladies' concave nickel-plated, $1.45; plain hockey, 27c to $1.35; nickel-plated hockey, 60c. to $2.50; double end hockey, $1.65 to $3. Skate straps, 70c. to $1.35.

Hockey Sticks—As in skates, wholesale business for the season of 1903-04 is now practically over. Although prices of all wooden goods are advancing, one or two houses have been offering special price concessions on their stock of hockey sticks in order to clear. Nominally prices are unchanged and we again quote the following prices: Best second-growth goalkeeper's, $3.80 per dozen; ash, $2.70; elm, $2.18; boys' elm, $1.10. Regulation pucks, $1.50 per dozen; boys', $1.15 per dozen.

Fire Shovels—Still in seasonable demand. We quote: No. 70, 39c. per dozen; No. 55, 55 to 82c. per dozen; No. 57, 82c. to $1.10 per dozen; No. 60, 70 to 88c. per dozen; No. 65, $1.10 to $1.23 per dozen; Duplex, No. 7, 96c. per doz.; No. 9, $1.20 per dozen; No. 11, $1.54 per dozen.

Snow Shovels—In seasonable request at unchanged prices. We quote the following prices: "Habitant," $2.50 to $2.75 per dozen; "Victor," 30 per cent. off: steel railroad shovels, 45 per cent. off.

Screen Wire Cloth—Orders are now being booked freely for forward delivery at the advance noted in our last issue. The price is $1.50 per 100 square feet, an advance of 7 1-2 cents on the price first announced.

Rubber Hose—A few inquiries are reported this week. It is stated that the general range of prices for 1904 will be from 10 to 15 per cent. in advance of the prices which obtained last year. Cheap rubber hose (2-ply) 1-2-inch and 3-4-inch will not be made this season by the Canadian manufacturers. The cheapest kind made this year will be the 3-ply in 1-2-inch and 3-4-inch sizes. A special brand of this quality is being offered at 75 and 10 per cent. off list.

Galvanized Coil Spring Wire—A fair business is reported this week at the following prices: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No. 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Car lots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in car lots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—The reduction of 5 cents noted in our last issue has made conditions more settled and has been followed by the booking of a few orders during this week. It is expected that from now on trade will be brisker. We quote: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and

9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12. $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. extra per 100 lbs. will be charged.

Barb Wire—The above remarks apply also to barb wire, a few good orders for which have been booked for forward delivery since the announcement of new prices. Prospects are bright for a brisk trade during 1904 in Manitoba and the Northwest. We quote as follows: $2.75 per 100 lbs. f.ob. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is nothing new to report this week. Prices are unchanged and we again quote as follows: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.; hay-baling wire, 20 to 25c.

Fine Steel Wire—Trade is quiet at present. The discount continues 25 per cent. with net extras as follows: 1 and 2-lb. hanks, 25c. per 100 lb.; 1-2-lb. hanks, 37 1-2c., and 1-4-lb. hanks, 50c.

Brass Wire—Business is fair at unchanged discount, viz., 60 per cent.

Copper Wire—Business fair: discount 60 per cent.

Rivets and Burrs—In rivets and burrs there is now little or no activity and the market is without any features of special interest. We again quote the following discounts: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—It is stated on good authority that there are now no American bolts and nuts offering on this market. Prices were not interfered with at the meeting of the bolt manufacturers held in Toronto last week and we again quote the following discounts: Carriage bolts, common ($1.00) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1.00) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1.00) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3.00) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes, 4c. per lb. off; nuts, hexagon, all sizes, 4 1-4c. per lb. off.

Washers, 45 per cent. off.

Cutlery—Trade is confined almost entirely this week to sorting orders.

Screws—We quote the following discounts: Round head bright, $82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—Trade is dull and there is nothing to note. We again quote: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

Lanterns—We quote as follows: Lift, hinged or tilt, $4 to $4.25 per doz.; cold blast No. 2, $7 to $7.50; painted dashboard, $6.50 to $6.75; plain dashboard, $6 to $6.25; searchlight, $20 to $24 doz.; brass cold blast, small, $9.75 to $10.

Cordage—In cordage the feature of interest is the continued strength of all cotton goods. There has been no actual advance since our last issue, but prices are very firmly maintained at the high figures quoted below. Manila hemp is being firmly held and prices of rope are well maintained. We quote: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11c.; single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 21c.; cotton twine, 20 and 23c. for 3 and 4 ply. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 29c.

Building Paper—Trade is very quiet at present. We again quote: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll: dry fibre, 55c. per roll: tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton: slaters' felt, 65c. per roll.

Cement—Trade is absolutely dead this week and no immediate improvement is expected. We quote the following prices: Canadian cement, $1.90 to $2.25: German, $2.25 to $2.40: English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—Trade continues very disappointing. Prices are unchanged, English being quoted at $16 to $22 per 1,000, and Scotch at $17 to $22.

Plumbing Goods.

The feature of the supply trade during the last three weeks has been the brisk demand for iron pipe. Unless another cold snap develops trade is likely to be quiet for a few weeks.

Lead Pipe—A good average trade is reported this week at firm and unchanged prices. Composition and waste are selling at 8c. and ordinary at 7c. The discount is 35 per cent.

Iron Pipe—As noted above, iron pipe has been in particularly good demand during the last three weeks. Prices are unchanged and we again quote as follows subject to discounts of as much as 10 per cent. in some instances for good business: Standard pipe, per 100 feet, in lengths under 19 feet—black, 1-8-in., $2.30; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55. Galvanized—1-4-in., $3.20; 3-8-in., $3.45; 1-2-in., $3.90; 3-4-in., $5; 1-in., $7.20; 1 1-4-in., $10.05; 1 1-2-in., $12.20; 2-in., $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in., $4.20: 3-4-in., $5.25; 1-in., $7.55; 1 1-4-in., $10.55; 1 1-2-in., $12.75; 2-in., $17.60. Galvanized—1-2 in., $5.20; 3-4-in., $6.65; 1-in., $9.55; 1 1-4-in., $13.25; 1 1-2-in., $16; 2-in., $21.

Soil Pipe and Fittings—In steady request at the following unchanged discounts from the list prices: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—In sympathy with the strong tin market solder is very firmly held at prices noted in last issue. We quote: Wire solder, 18c; bar, 17 1-2c.

METALS.

Apart from some special sales of Canada Plates, business this week has continued on the quiet side. Buyers have not become anxious to load up with new stock with the change of calendars. There are a number of inquiries for galvanized iron and some large sales are expected soon. Buyers are continuing to make offers which are not agreeable to sellers. Tin is still very firmly held, but no advance has been made over last week's quotations.

Pig Iron—The market continues very quiet and in the absence of much actual business it is hard to quote with exactitude. We quote as follows: Summerlee, $19.25 to $19.75; Carron, No. 1, $21; do., No. 3, $18.50 to $19; Middlesboro', No. 3, $17 to $17.50; Ayersome, No. 1, $20; do., No. 3, $19.40.

Bar Iron—Merchants' bar is selling at $1.85; horseshoe iron $2.10; forged iron $2.05.

Black Sheets—Actual business this week has been very light, but prospects seem good for an active trade later on. We again quote as follows: 28 gauge, $4.25; 26 gauge, $2.40; 22 to 24 gauge, $2.35; 18 to 20 gauge, $2.30, and 8 to 10 gauge, $2.40.

Galvanized Iron—Numerous inquiries are reported this week and although actual business is slack at present good sales are expected to be made very soon. We again quote as follows: Gorbal's "Best Best," $4.30; 28 Queen's Head, $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates In sympathy with the increasing strength of tin, tinplates are

very firmly held. A few small sales were made this week. We quote generally: Cokes, $3.75; and charcoals, $4.

Ingot Tin—The market continues very firm, but no advance has been made on last week's quotations. We quote 32 to 33c.

Terne Plates—Terne plates are a trifle cheaper for import, but no change has been made on quotations from stock. Prices range from $6.75 to $7.

Coil Chains—We again quote No. 6, 10c.; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 3-8-in., $4; 7-16-in., $3.80; 1-2-in., $3.70; 9-16-in., $3.55; 5-8-in., $3.35; 3-4-in., $3.30; 7-8-in., $3.25; and 1-in., $3.20, with 10c allowance on carlots.

Canada Plates—A number of large sales have been made during the week. We quote: 52s., $2.30; 60s., $2.40; 75s., $2.55; full polished, $3.60, and galvanized, $4 to $4.10; galvanized 60s., $4.25 to $4.35.

Steel—Business is only fair. We quote: Sleighshoe, $1.95 to $2; tire, $2 to $2.10; spring, $2.75 to $3; reeled machinery, $2.75 to $3; toe calk, $2.60; machinery (iron finish) $2.50; square harrow, $2.50.

Tool Steel—A satisfactory volume of business is passing at the following unchanged prices: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Jonas & Colver's, 10 to 20c; "Air Hardening," 50 to 65c. per lb.; Conqueror, 7 1-4c.

Ingot Copper—The market continues very firm, but last week's quotations still obtain. We quote: $13.50 to $13.75 per 100 lbs.

Pig Lead—Quoted at $3.20 to $3.30.

Sheet Zinc—Business is fairly active at steady prices. We quote $6.15 to $6.25 for cask lots; smaller quantities, $6.50.

Zinc Spelter—The price is 6c.

Scrap Metals—Business is still in a state of stagnation. There are no changes and we again quote as follows: Heavy copper and wire, 9 1-2 to 10c per lb.; light copper 10c.; heavy red brass, 10c.; heavy yellow, 8 1-2c.; light brass, 5 1-2c.; lead, 2 1-4 to 2 1-2c.; zinc, 2 3-4 to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $13 to $15; stove plate, $12; mallable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers 6 to 6 1-2c. per lb.

Ashes.

The demand is good and prices have been slightly advanced. Supplies are light. There are no pearls on the market and prices for same are purely nominal. The export demand is said to be good. We quote:

First pots, per cwt	5 00	6 10
Seconds	5 65	5 70
Pearls, per 100 lb	7 00	7 25

Hides.

There is no change in the situation since our last report. Receipts from the country are lighter than before the holiday season and the market is generally reported quiet. We quote:

No. 1 beef hides	0 08	0 08½
No. 2 "	0 07	0 07½
No. 3 "	0 06	0 06½
Lambskins		0 75
No. 1 calfskins		0 10
No. 2 "		0 08

ONTARIO MARKETS.

Toronto, January 16, 1904.

Hardware.

"BUSINESS is particularly good," stated a leading wholesale dealer this week. "The chief feature of this situation is the fact that indications point toward stiffer prices. This talk of the competition of American goods is hard to understand as there is really not more of this competition than has been the case for some time." Generally speaking the above represents the opinion of the trade. In some lines competition has been especially keen but on the whole the prospects are favorable. Orders for future delivery are coming in nicely, those from the West being of large volume. The skate trade is practically done, but there is still an excellent movement of snow shovels, occasioned to a large degree by the heavy snow fall. Cordage prices seem to have gone crazy, another advance of 2c. in sash cord being noted this week. Prices on axes are now "open" and lower prices are predicted. The only change other than this is in Scotch firebricks, which have been reduced 2c., making the price the same as English.

Screen Wire Cloth—Orders are coming in fairly well at the new prices, $1.50 per 100 square feet.

Spring Hinges—A fair business is doing at the new prices, which are steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—Orders are coming in as well as usual for delivery up to May 1. Practically nothing is doing for immediate requirements. Prices are now steady as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8, and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. per 100 lbs. extra charged.

Barb Wire—A fair business for later shipments is reported with prices steady since last week's decline of 5c. We now quote as follows: $2.75 per 100 lbs. f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—The proportion of this wire selling is large again this year. Prices are now as follows: No. 9, $2.70 per 100 lbs. f.o.b. Cleveland, freights equalized with factory points at Hamilton, London, Welland or Windsor and allowance to other points up to 25c.; carlots, $2.65, freight allowance to 20c.

Wire and Cut Nails—There is a small movement from stock. Orders for later delivery are large. Quotations being made for delivery up to May 1, but not for delivery later than that date. The base prices for ordinary lots are $2.45 per keg f.o.b. Toronto.

Screws—No change is reported in this line. A fair business has been done. We quote: Flat head bright, 87 1-2 per cent. discount; round head bright 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Business is improving at steady prices. Our quotations are: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—The Canadian manufacturers seem to have a clear field, as United States competition is now practically nil. We quote as follows: Carriage bolts, common ($1 list), 3-16 and 1-4-in., 60 per cent.; 5-16 and 3-8-in., 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—Cotton prices continue to boom upwards and Canadian manufacturers of cotton cordage are keeping prices away up. Sash cord is 2c. higher this week. We quote as follows: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11 1-2c.; single lathyarn, 11c.; double shinglevarn, 11 1-2c.; single shinglevarn, 11c.; sashcord "Hercules," 30 to 32c.; "Star," 38 to 40c.; cotton rope, 3-16-in. and up, 20 1-2 to 22c.; 5-32-in., 25 to 27c.; 1-8-in., 25 to 28c.; cotton twine, 3-ply, 22 to 24c.; 4-ply, 26 to 28c.

Skates—The season is about over and stocks are pretty well cleared out.

Harness—A particularly good demand for sleighbells and horse robes is reported, at steady prices.

Snow Shovels—An excellent demand has been caused by the heavy snowfall, particularly in the stronger, heavier shovels.

Woodenware—But a slight demand. Prices are unchanged as follows: We quote per dozen: Washboards, Victor $1.35; Crown, $1.45; Improved Globe, $1.60; Standard Globe, $1.70; Original solid Globe, $2; Superior Solid Back Globe, $2.15; Jubilee, $2.10; Pony, 95c.; Dominion King (glass), $3.10. Tubs, No. 0, $10.50; No. 1, $8.50; No. 2, $7.50; No. 3, $6.50. Pails, No. 1, 2 hoops, $1.75 and $1.90.

Building Paper—The market in building paper continues quiet this week. Our quotations are: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c. per

roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c. per roll.

Cement—Cement is quiet with last week's prices unchanged. We quote: Canadian Portland at $2.05 to $2.65 Toronto, and $1.65 to $1.90 at the works; American Portland, $2 Toronto.

Firebricks—There is an active trade. Prices of Scotch are 2c. lower than a week ago. This brings the quotations on both English and Scotch to 28 to 33c.

PLUMBING GOODS.

Business is quiet as usual at this season. Last week's prices continue unchanged. Our quotations are:

Lead Pipe—The market in lead pipe is dull. We quote the following prices: Lead, 7c.; lead waste pipe, 8c.; discount 35 per cent.

Soil Pipe and Fittings—Trade is steady but quiet. Our quotations are as follows: Light soil pipe, 45 and 5 per cent.; light soil pipe fittings, 50 and 5 per cent; medium and extra heavy pipe and fittings, 55 and 5 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

Iron Pipe Fittings--Business is fair We quote the following discounts: Malleable fittings, 15 per cent.; cast iron (not standard), 57 1-2 per cent.; headers, 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; unions 55 per cent.; nipples, 2-in., 65 per cent.; nipples 2 1-2 to 6-in., inclusive, 60 per cent.

Copper Range Boilers—Trade is fair. Last week's discounts at 15 per cent. continue.

Brass Goods--Business in steamfitters' brass goods is fair with prices steady.

Iron Pipe—There is not much doing in iron pipe this week We quote f.o.b. Toronto as follows: 1-8-in., $3.25; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55; 2 1-2-in., $19.25; 3-in., $22.75; 3 1-2-in., $28.75; 4-in., $35.25.

METALS.

The completion of stock taking by many manufacturers throughout the country has proved to be one of the most potent factors in creating a stronger tone in the Ontario metal market. A good year's profits have been disclosed by practically every balancing-up. So, as the indicatons warrant the belief that the volume of business in Canada will this year be fully up to the large volume of last year a more hopeful view of things is taken than was the case last year. Prices show no appreciable change but there is manifestly a stronger tone regarding most metals and particularly iron and steel, than has been the case for some time. The curtailment of production of pig iron in the United States has undoubtedly helped towards a stronger position in iron and iron products and the fact that many furnaces are again being started is an indication of the trend of opinion as to the future of the market.

and while quotations show no change there is a better feeling owing to the stronger tone on outside markets. Prices are nominally $18.50 for No. 1 and $18 for No. 2.

Bar Iron—Competition is still keen. Our quotations are unchanged, but are nominal. Some dealers quoted higher for ordinary business. We quote: $1.80 f.o.b. Toronto for extras cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft. 20c., over 20 ft. by special agreement according to length and size.

Black Sheets—Prices are unchanged, a fair business doing. We quote: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—There is rather better movement, with prices steady. We quote: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—A fairly good business has been prompted by the stiff market. An advance of $1 per 100 lbs. is noted on the local market, which change is a result of higher values on the larger markets. We now quote prices at $30.50 to $31.50.

Galvanized Sheets—A fair trade is doing at steady prices. We quote: Queen's Head, $4.25 to $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.25 for 28 gauge; Gordon Crown, $4.25 for 28 gauge.

Tinplates—A better feeling prevails, despite American competition. We quote as follows: Coke plates, bright, 14x20, $3.75; charcoal plates, $4.25.

Copper—There is a fair movement. Prices steady as follows: Ingot copper, $14, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—A considerable advance is reported at outside market, but local quotations are steady. We quote: $3.30 per 100 lb. for pig lead and $3.65 for bar lead.

Zinc Spelter—Prices show an upward tendency at primary market, but the local situation is unchanged at 6 to 6 1-2c. per lb.

Zinc Sheets—The market is firm and a fair business doing. We quote: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c., and wiping, 17c.

Old Material—Trade is opening up fairly well and prices are firm. We quote: Heavy copper and wire, 10c. per lb.; light copper, 9c. per lb.; heavy red brass, 9 3-4c. per lb.; heavy yellow brass, 8c. per lb.; light brass, 5c. per lb.; lead, 2 1-4c. per lb.; scrap zinc, 3c. per lb.; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast scrap, $13 to $14; stoveplate, $10; malleable and steel, $4; old rubbers, 6 1-8c. per lb.; country mixed rags, 50c. per 100 lb.

Hides, Skins and Wool.

The market continues quiet this week, with last week's prices unchanged. Our quotations are:

PITTSBURG METAL MARKET.

From the Iron Trade Review, Pittsburg, Jan. 14, 1904.

IN finished lines the iron and steel trade has improved decidedly in the past ten days, and the general situation is more encouraging than at any time in months. Specifications on old contracts, and new orders placed last week with the largest steel producers were heavier than during any similar period since last July, and this week thus far is showing a decided improvement over last. The largest tonnages booked are in iron and steel bars, while plates and structural material are not far behind. Wire nails and wire products are also in excellent demand, and an improvement in heavier lines is expected to follow the better condition in the lighter classes of material.

Manufacturers of steel bars are especially well pleased over the present situation. At a meeting of the association held at the Union Club in this city yesterday a number of manufacturers were in favor of making an advance of $1 per ton, but this was overruled by a slight majority. The bar iron situation has also stiffened up considerably. The largest producers will only quote 1.30c. Youngstown, on business for early delivery, and are not anxious to close for any extended delivery at this price. On Monday the American Steel and Wire Co., the Pittsburg Steel Co., and the wire and wire nail interests of Ironton, O., and Ashland, Ky., issued a new uniform price list, which carries an advance of

$1 a ton on wire nails and all wire products. For the past three or four months this market has been demoralized with the result that quotations dropped from $4 to $5 a ton from the last official prices announced by the American Steel and Wire Co. The new list bases all quotations f.o.b. Pittsburg. This is the first agreement on wire nails and wire products that has been entered into for some time, and while numerous small concerns are not included in the agreement, all of the large factors in the trade in competition with the American Steel and Wire Co. have agreed to maintain prices. On the other hand the cut nail manufacturers at a meeting held here last Thursday reduced both iron and steel cut nails 10 cents a keg. Foundry coke, strictly Connellsville, is quoted at $1.90 to $2, although producers of grades very low in sulphur are receiving as high as $2.15 and $2.25.

For Yourself

You choose reliability and endurance when it comes to building—

Choose the Same for Your Customers

Then you are certain of harmonious conditions and ever-increasing sales and prestige.
We make every conceivable need in

Sheet Metal Building Materials

Honest, capable goods that give the acme of artistic effect, as well as enduring reliability. With our lines in stock, you'll never have an apology to make to your customers.
Consider—these things count for much.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

NATURE AND THE AMERICAN IRONMONGER.

WE must recognize the lavish hand with which Nature prepared the way for our industrial triumphs, by accumulating along the southern and western shores of Lake Superior those vast beds of iron ore, which are not only the most extensive in the world, but are so placed that the labor of excavating and loading for shipment is practically nothing, says Scientific American. The ore, which is extremely rich, 60 per cent. of it being iron, lies practically at the surface of the ground; and it is so loose and friable that all that is necessary for its recovery is to run in a train of cars, set a steam shovel at work, and load the material directly onto the cars. This work has actually been done at the rate of 5,800 tons in ten hours, and this with the labor of but eight men at a cost of five cents only per ton for labor. The supply is enormous, a single corporation having recently estimated its holdings at 500,000,000 tons, valued at as many million dollars. These vast and easily-recovered supplies, however, would have a limited value, were there not available a proportionate supply of coking coal; and this has been provided with an equally lavish hand in the famous Connellsville district, where a single coke company on entering into one of the great industrial combinations of the past few years, stated that it owned 40,000 acres of coal lands in this region, and 11,000 coke ovens. Within easy reach of the coal district there are also large quarries of limestone, the third of the three constituents in the charge of a blast furnace.

BUSINESS CONDITIONS IN MANITOBA.

By Regular Correspondent, of "Hardware and Metal."

Office of "Hardware and Metal,"
Room 308 McIntyre Block,
Winnipeg, Jan. 11, 1904.

BUSINESS is quiet in all lines of hardware, and wholesale houses are busy taking stock and getting matters in trim for the Spring rush. Until stock-taking is completed there will be very few changes in the price-lists for staple lines of hardware.

So far as Spring requirements can be forecast at the present time the outlook is for a very heavy trade in all classes of building hardware, structural iron and builders' supplies generally.

Great interest has been excited throughout the province by the publication in The Free Press on Thursday, January 7, of a lengthy interview with Mr. Wm. Whyte, 2nd vice president and general western manager of the C.P.R., to the effect that if the combine, which is now known to exist between the manufacturers of lumber and the retail dealers' association, did not amend their ways and charge lower prices for this prime requisite of the new settler, the C.P.R. would open large mills in British Columbia and would sell lumber at lower figures through their various agencies. This statement raised a storm among the various dealers in the retail association, and there have been strong statements on both sides of the case, the retail dealers laying the whole blame of high prices and insufficient stocks on lack of transportation on the C.P.R. There have been transportation difficulties without doubt, but dealers outside the combine give some rather startling figures. For example, they state that during the past Summer they have gone into Washington territory, bought lumber at the ordinary lists prevailing to the jobbing trade, paid precisely the same freight as from Vancouver, paid $1 per M duty, and yet been able to lay the lumber down in Winnipeg for $3 less than the same class of lumber from British Columbia. The controversy is going merrily on and the people of the West are watching the outcome with much interest, as the cost of lumber and the possibility of getting a sufficient supply is a matter of the most vital importance to the incoming settlers, and will help or hinder immigration more than any other one factor.

* * *

The Union Bank, Winnipeg's first sky scraper, now in course of erection here, is to be of brick from Lac du Bonnet. This is the second large building to be erected of this particular native pressed brick, which is very handsome in appearance, and of a peculiar tone of pinky buff.

John McKechnie, head of The Vulcan Iron Works Co., was the recipient of a solid silver fruit service and smoker's companion during the holiday season from the men of the works. Mr. E. K. Barrett, of the same company, was also presented with a solid silver writing and cigar set.

SUCCESSOR TO MR. KORB.

Mr. J. N. Hunter assumes charge this week of the advertising department of Lewis Bros. & Co., Montreal, following Mr. Theodore Korb, whose departure for Louisville was noted in our last issue. Mr. Korb is a hard man to follow, but Mr. Hunter is young, energetic and enthusiastic, and his friends have no doubt that he will achieve success in his new position.

INTERNATIONAL STOCK FOOD CO.

THE International Stock Food Co. who started in operation their Canadian manufacturing plant at Toronto a few months ago, have already won a wide connection throughout the Dominion. This firm are manufacturers of stock foods which are widely recognized for their practical value throughout Canada as well as the United States. In the Minneapolis headquarters of the concern is a model farm, one of the most famous in the world. In it several remarkable horses are kept, including Dan Patch, 1.56¼, champion harness horse of the world. These animals are all fed on the company's stock food. The International Stock Food Co. are large, shrewd advertisers, and use the farming journals, etc., to assist their agents in making their lines popular. A good feature of their advertising is the gratuitous distribution of literature to customers of any of their agents. Hardware dealers who are not in touch with this company should write at once to secure the agency for that town.

DUNDAS AXE WORKS.

THE Dundas Axe Works are known to practically all Canadian hardware merchants. In their catalogue this year they say: "The steel we now use enables us to make an axe that is hard without losing its toughness. A customer living in a region where hemlock is plentiful got a shantyman to try our axe on a hemlock knot, and reported that 'he could not mark the axe.' The shape of our axes for 1904 has been further improved and is now so perfect and so uniform that it is only necessary to get the weight the customer wants. It is not necessary to show a dozen or more to sell one. Our axes are known to lumbermen to be thoroughly reliable, each box containing 12 good axes. These axes are advertised in papers that reach the buyers of axes, the men you want to sell to, and they are going to ask you for them." It would be worth while writing for a copy of this catalogue, which contains cuts of their various brands.

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of "Hardware and Metal."

IT has been something of a shock, to say the least of it, to learn from special despatches received from Winnipeg to-day, that the Canadian Pacific are seriously contemplating entering into competition in the lumber business with the mills now in existence. The authority of Vice-President W. Whyte, of the C.P.R., is quoted for the assertion, which is that the company will erect large and up-to-date sawmills and sell direct to the settlers through their agents unless the lumber "combine" and the retail dealers will reduce their prices and sell at a reasonable profit.

This statement, made in Winnipeg, is, of course, of vital importance here on the coast and in the interior of the province, where large mills are now numerous, and, many of them, like the coast mills, depend largely on the trade of Manitoba and the Northwest. The claim has been made right along by the lumbermen, that owing to increased cost of production and high freight rates the price of lumber cannot be lowered. An additional factor in the cost has been found in the somewhat increased timber dues and license fees fixed by the new land act af the British Columbia Government, passed at the session still in progress.

Prices of all grades of lumber have increased steadily for the past three years, so that even here on the coast, at the point of production, there has been at least 30 per cent. increase all round. The cost of building has almost become prohibitive in Vancouver, what with high price of lumber and very high scale of wages in all building trades.

A grievance the lumbermen have been claiming is that the free admission of lumber from the United States has militated against the trade. They have been working hard by every means to make such representations to the Dominion Government that a duty shall be levied on lumber from the United States at least equal to that which Canadian lumber has to pay entering the republic. They assert that hundreds of cars of lumber sold below cost have been dumped on the market of Manitoba and the Northwest during the last three months of the past year, with the effect that the market there was demoralized. They claim the United States lumbermen have followed this course rather than allow their overproduction to demoralize their own home market.

There is no question that the pronouncement of such a high official as Mr. Whyte will cause a sensation in the lumber trade, being so irreconcilably at variance from the emphatically expressed views held by the leading men in the trade. It will have a very serious effect on the general business interests of the coast in particular if any crisis is brought on by the stated intention of the C.P.R. There is not the least doubt that the mills would not hesitate a moment to close down to prove the justice of their claims. One leading mill manager said not long ago that he was very willing at any moment to permit any interested party to send in a force of expert accountants to make an examination of his books and report as to the profits in operation for the past year. The business had been good, and there was a large turnover, but the margin of profit had been small. He was ready, he said, to make this offer at any time.

At the time the statement was made, which was shortly before Christmas, the gentlemen in question was discussing the inequiatble conditions under the tariff on lumber, which the millmen here suffered from, being practically handicapped by a duty of $2 per thousand. Then there was no such move on the part of any person suggested. It will be interesting now to note if the millmen would be ready to allow Mr. Whyte to send in experts to go over their books and ascertain the amount of profit, if any, from operating the mills in 1903, which was a very favorable season, taken all round. The demand for lumber and shingles was fairly good, and the supply of cars by the C.P.R., especially in the latter part of the Summer, was better than formerly.

* * *

In connection with the lumber question, it is notable that at the present moment every mill in Vancouver has a very heavy stock of lumber on hand. It has been noted adversely during the past few weeks that it does not look well to see the lumber being piled up at such a rate. It is an indication that the demand is not so good as it was. Of course there is less being shipped to the Northwest in Winter than in the open season, and building falls off even here, where the season is open all the time, because there is too much rain to permit of steady work. There is a remarkable amount of building, even of new houses starting, still in hand for the season of the year, and there is every indication of greater activity than last season before long.

* * *

Two freight steamers, one last week, the Oanfa, of the China Mutual Line, and another this week, the Peleus, of The Ocean Steamship Co., have been discharging cargoes at British Columbia ports. The quantity of freight brought by each succeeding steamer of these lines is constantly increasing, and indications are that the business of sailing ships will be largely cut off, for general merchandise cargo at least. The whole of the trade in metals, iron, steel, both bar and sheet; and galvanized sheets, steel rope, fire bricks, glass, and many other lines of staples, has practically gone to the steamers, which have now been running regularly for the past year.

Both these lines, the China Mutual and The Ocean Steamship Co., are owned by Alfred Holt, of London, Eng., and his associates. The vessels are all of enormous carrying capacity, averaging something like 10,000 tons. The number of these steamers owned by the Holt syndicates is nearly 100, so that the connection is worldwide, the steamers covering every freight route on all the oceans of the globe. This past season the vessels have been able to get some return business from British Columbia ports by carrying out salmon for England, taking a large percentage of the 1903 pack. The carrying of special orders of lumber has also been undertaken, and in other ways there is promise of remunerative return traffic. Nearly every steamer has brought several hundred tons of cargo for the merchants of Victoria and Vancouver from the marts of England. A large quantity of materials for improvements at the Esquimalt navy yards, has been shipped during the past year by the British Admiralty on these steamers.

* * *

Whether it foreshadows an intention on the part of the C.P.R. to begin manufacture of coaches here or not, the statement is made that the company intends to make a test of the various valuable hardwoods from Australia for purposes of interior decoration. They are arranging for trial importations and will erect a storage warehouse near their shops on False Creek in this city for the purpose of receiving the timber. Already there has been considerable use made locally of the Australian woods for cabinet work and shop and office fittings. One variety in particular, the Australian red bean wood, is a very great favorite here. It takes a splendid polish on its natural color, which is a deep rich red. Other varieties have also been tried. The importation of Australian hard woods has been carried on here for a number of years, the direct steamship service between British Columbia and the Commonwealth making it very convenient.

* * *

Another C.P.R. announcement of interest this week, is the intention to begin the lighting of their passenger coaches with acetylene. The gas will be stored under pressure in tanks situated in the cars. To produce the gas a plant will be erected at the shops and carbide of calcium imported from the east.

* * *

The customs returns for Vancouver and Victoria manifest substantial progress during the past year. Vancouver's total imports increased from $5,615,014 to $6,071,064, and the revenue from all sources advanced from $1,264,416 to $1,552,287. The revenue at Victoria (from imports only) increased from $719,977 to $767,799. 6The total revenue at Victoria this year was $1,354,772.

Vancouver, B.C., Jan. 9, 1904.

PERSONAL MENTION.

Mr. J. Ernest Millen, of John Millen & Sons, Montreal, was in Toronto this week on business.

W. C. Webster & Son, Coaticook, Que., write: "We consider our money has been well invested in subscribing to "Hardware and Metal."

Mr. Henry J. Fuller, manager of The Fairbanks Co., Montreal, returned to that city on Wednesday from a short business trip to New York.

Mr. Jas. R. Kinghorn, general sales agent for The Montreal Rolling Mills Co., is seriously ill with typhoid fever at his home in Westmount. Much sympathy for him is expressed in Montreal business circles, as he had only recently returned to his desk after a long illness. "Hardware and Metal" wishes him a speedy recovery.

BROKER AND MANUFACTURERS' AGENT.

Geo. W. Weeks, formerly Weeks & Robson, has recently opened up for himself in Vancouver as a broker and manufacturers' agent, and is open to receive a few good agencies. Mr. Weeks has lived in Vancouver for about 15 years.

OFFICIAL TEXT OF C. I. F. DECISION.

WE were unable to obtain the text of this decision in time for publication in our last issue. A number of Montreal business men have expressed a desire to have a copy of the decision for reference. The full text of the decision is as follows:

SUPERIOR COURT.

Province of Quebec, District of Montreal.

The thirty-first day of December, 1903.

Present:

The Hon. Mr. Justice Trenholme.

The Canada Hardware Co., Limited, Montreal,
versus
Suren Hartmann & Co., London, England.

The court having heard the parties and their witnesses, examined the record and duly deliberated.

Seeing that no special or other agreed and thirty-nine dollars and ninety-seven cents which it alleges it suffered by defendants' failure to insure as they were bound to do, certain merchandise purchased by or from defendants under the contract with "cost, freight and insurance to Montreal" clause (plaintiff's exhibit No. 1) and which merchandise was damaged to the extent of said sum by salt water on the voyage which was a peril of the sea, against which defendants ought to have insured but did not, the only insurance effected thereon by the defendants being warranted free from particular average or partial loss, except in case of the vessel being stranded, sunk, burnt or in collision.

Seeing defendants plead that they furnished plaintiffs with the insurance agreed upon, and called for by said contract and which was the ordinary insurance, and the kind previously provided to plaintiffs and accepted by him, and further that plaintiff is too late in instituting its action.

Seeing that no special or toher agreement or usage is proved exempting defendants from effecting such insurance on said merchandise as the law alone required them to effect.

Seeing that no special or other agreeby them in effect only cost one-third the premium and only covered one-third the risk from ordinary perils of the sea, and was not such an insurance as said contract and the law called for.

Seeing that plaintiff has proved that said merchandise was damaged by a peril of the sea against which defendants were bound to insure the same.

Seeing that no special or other agreeplaintiffs from defendants' failure to effectually insure said merchandise, as they were bound to do, that the plaintiff hath failed to satisfactorily prove that it hath incurred the loss of nine hundred and three dollars and eighteen cents, claimed by it in the first shipment of said merchandise, but hath proved the loss of two hundred and sixty-three dollars and twelve cents, and one hundred and seventy-two dollars and ninety-seven cents, on the second and third shipments, making together four hundred and thirty-six dollars and nine cents.

Seeing that plaintiff hath proved the material allegations of its declaration to the extent of four hundred and thirty-six dollars and nine cents, and the defendants having failed to prove their defence.

Doth reject defendants' plea, and maintain plaintiff's action, and condems defendants to pay and satisfy to plaintiff the said sum of four hundred and thirty-six dollars and nine cents, with interest thereon from the twentieth of October, 1902, and costs. And the court doth reserve to plaintiff its right and recourse against defendants for all loss on said first shipment, should plaintiff's purchaser thereof make good a claim therefor against plaintiff, or should plaintiff satisfactorily and legally establish that it has really suffered a legal loss on said first shipment in consequence of defendants' said failure to insure the same.

TAXING TRADE CATALOGUES.

I am glad to see that the manufacturers' section of the London Chamber of Commerce at their last meeting called attention to the foolish and unfair practice of the Dominion and various colonial Governments in levying an import duty on trade catalogues sent from this country for circulation in our oversea possessions. A strongly worded resolution was unanimously adopted, calling upon the Home Government to bring the matter to the notice of the colonial authorities, with a view of securing the admission of catalogues and circulars duty free when sent in single copies to addressees in Canada, Australia, and elsewhere. That catalogues and books sent through the post should be taxed by an old-fashioned country like Spain is not greatly to be wondered at, but that go-ahead Governments like those of our colonies should descend to such extraordinary tactics is surely passing strange.—The Ironmonger.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITICISM

Edited by John C. Kirkwood, TORONTO.

NOTE—Herein are discussed the principles and practice of advertising. Subscribers are invited to send Mr. Kirkwood specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

Advertising by Circulars.

I AM in receipt of a letter and circular from a firm of hardware merchants in a town in one of the territories of the Northwest, and the request is made that the circular be reviewed in these columns. It is pleasing to note that in the newly settled portions of the Dominion there are merchants imbued with the spirit of enterprise and who are using modern methods for the extension of their trade. In passing, I wish to congratulate my correspondents on the good stationery they use. The quality of stationery business men use is something that receives little attention, but is none the less a subject for comment. Good clothes in another direction are properly appreciated, but a letter's dress is too often cheap and unworthy.

The following circular letter was sent out to accompany a "Gem" chopper cook book :

A Few Considerations for the Ladies.

We are so confident that the "Gem" food chopper will please you and save the price of itself in six months that we will give you one on trial for ten days, and if you are not entirely satisfied and delighted with it we will be pleased to have you return it. This is a fair proposition, and we trust it will appeal to all the ladies. Kindly read the enclosed cook book and see how the left-overs may be served in an appetizing manner instead of being thrown out.

The prices are $2, $2.50 and $3, according to size. Another article we wish to bring to your notice is the "Enterprise" raisin seeder, which we retail at $1.50.

We also have a very good seeder for $1.

It is with considerable pride that we invite you to inspect our beautiful display of hanging and table lamps. We feel confident that the display is unsurpassed in this district, and we would like you to call and insp ct them, even if you do not buy.

We also have a beautiful assortment of carvers in cases, silver knives and forks, black and white-handled knives, nickle-plated tea and coffee pots, also many other articles suitable for Xmas presents. We cordially invite you to call and inspect our stock.

Yours very truly,

BROWN & BLACK.

Everything in hardware.

This circular comes to us hand-written, done extremely well ; so legible and neat that reading is a pleasure. If it were sent out so to the public I feel sure that it was quite as acceptable as printing. The great objection to hand-written communications of an advertising nature is the labor involved in their preparation. Then, too, unless they are very well done, they are discreditable rather than otherwise. At the same time there is something distinctly personal and intimate in a hand-written circular. There are always young women or students to be found able to do this class of work satisfactorily and cheap, so that the expense of getting them out need not be very great.

"A few Considerations for the Ladies" is the caption of the circular. My own choice of a word in this connection would not be "ladies." The word "ladies" is scarcely the one to use. The appeal to be made is not to the qualities of gentleness and refinement that characterize womankind. I would say "womenfolk" or "housewife" or "mistress of the household" as being happier and better.

The introductory sentence is a little abrupt. There is certainly no time wasted in getting at business. The circular would open more smoothly if it began with some such sentence as—"We have decided to adopt an unusual method of introducing to our customers' notice a household article of exceptional merit."

The word "proposition" is a jarring one to many sensitive people. It has come to be regarded as slang by many, and therefore offensive. At best it is a word to use in talking with men. I suggest "proposal" as being more dignified and acceptable. "Instead of being thrown out" following upon "appetizing" is not happy. It recalls a story I read recently in which a railway engineer with a liking for buttermilk sought to find some at a neighboring farmhouse. The good woman cheerfully supplied the milk, remarking that he was fortunate in arriving at that moment as she was about to give the buttermilk to the pigs. "Instead of being thrown out" may be omitted altogether without loss.

In view of the fact that the circular was to accompany a food chopper, I think it a mistake to extend its scope so as to advertise lamp goods, cutlery, etc. The raisin seeder is permissable, since it is so closely allied to the chopper in mechanism and purpose. It is not wise to introduce these other lines. There is a loss of force. Attention to the chopper is secured only to be dissipated. Had the circular been avowedly a general one, my criticism would not apply, but its purpose has been declared to be to emphasize one article, as shown in the letter accompanying the circular.

This is one of the faults of advertising —the tendency to tell too much, or to tell about too many things. One thing at a time, and that done well, applies to advertising. The natural end of the circular is immediately following the matter relating to the raisin seeder. "Everything in Hardware" is a good phrase, and its insistence in every advertisement is proper. To get the public to associate "Everything in Hardware" with the mention of the name of Brown & Black is profitable advertising without a doubt.

What I have said about this circular so far may seem to savor of pettiness. To pick to pieces any honest, well-intended, praiseworthy advertisement may seem unkind and uncalled for. Under some circumstances it is. In the instance before us, a review was requested, and I sincerely hope that the criticisms made will prove helpful to Brown & Black in any future undertakings of similar character.

Regarding the circular as a form of advertising, opinion may be divided. We are all of us familiar with the poorly printed, lavishly scattered, unattractive "dodger." This, notwithstanuing its failings, accomplishes its object under certain circumstances. For the merchant, however, I do not counsel its use. I believe in the mailed circular, provided the circular itself be a good piece of workmanship. As a substitute or alternative for newspaper advertising I am not so ready to commend it. As an adjunct to newspaper advertising it is more to be trusted. It is extremely difficult to lay down hard and fast rules concerning such matters. Conditions have to be taken into account ; what is good one time, one place, may be bad another time, another place. For the retailer brief, pointed, enticing advertisements in the local paper is always good. And, when occasion warrants, the circular is pretty sure to repay all outlays in connection with its preparation and issue.

WINDOW GLASS

FOR DIRECT IMPORTATION

We are in a position this year to offer you a choice between the ordinary quality and packing and an extra grade packed in specially strong boxes.

We offer the ordinary quality and packing at lowest prices obtainable, but would ask you to consider our special offer as to quality and packing at a small advance over the ordinary grade.

The trade will know the importance of Glass being packed in good strong cases to insure delivery in good condition.

Write for our prices.

LIMITED,

London, - Canada.

PAINT, OIL AND BRUSH TRADES

Natural Woods and How to Finish Them.

THE revised and enlarged edition of this little book on wood finishing is now being sent out by Berry Bros., of Detroit, Mich. The first issue was so well received that this is bound to meet with still wider favor, containing as it does much new matter of interest to both architiects and wood finishers.

The book is practical, eliminating all matter having no direct bearing on the subject treated.

There is nothing experimental in the methods given for the various styles and methods of wood finishings, all are based upon actual experiences and may be relied upon as correct.

The book should be in the hands of every architect, decorator and wood finisher. The little book will serve as a useful reference for the architect in writing his specifications, and will not be found devoid of interest to the decorator or wood finisher.

The book will be sent free to such architects, finishers and those interested who ask for it.

Advertising in Winter Months.

THE S. W. P., the monthly organ of the Sherwin-Williams Co., makes the following suggestions to agents of that company, which will apply in large measure to all retail paint dealers:

"Does it pay the paint dealer to advertise in the newspapers during the Winter months? This queston has been well and finally answered by the success of those who constantly use newspaper space and always keep their paint stock before the public.

"No legitimate reason has been advanced why paint advertisements should be run only during the seasons paint can be applied to exterior surfaces. And every rule of good business and every feature of the paint trade calls for continuous publicity.

"While no paint may be put on the outside of houses in many territories during the next few months, property owners who are going to paint in Spring are interested in paints now, and their orders can be securel long before the paint goes on the house. In the majority of instances, it is during the Winter months that the property owner considers and decides on the paints he will use. He will be on the look out for the best paint for his work, and the merchant who keeps his proposition before him has an immeasurable advantage in landing the order. The merchants running good newspaper ads on S. W. P. during the coming months will have the biggest Spring business.

"Many paint specialties find a large sale during the Winter—several have their largest market then. Strong newspaper advertising of these specialties has a double advantage. It not only increases their sales but keeps the dealer in touch with his customers for the large Spring orders.

"By continuing to use newspaper space, the paint dealer will hold and increase the position he has already made; by dropping advertising for several months, he will be compelled to make special efforts to get public attention again.

"There are many electrotypes, illustrated in our electrotype booklet, on S. W. P. and various specialties that will make good newspaper advertising. We shall be pleased to furnish them for your newspaper space free of cost."

Meeting of Shareholders.

The shareholders of the Canada Paint Company are holding their annual meeting to-day (Saturday) at the company's headquarters at 572 William street, Montreal.

Paint and Oil Markets.

MONTREAL.

The feature of the week in the paint and oil markets has been a sharp advance in turpentine which is now variously quoted at 88 3-8 to 90 1-4c. per gallon for single barrels. The higher price seems to obtain with most houses and it seems probable that quotations will settle at 90 1-4c. for some time. It is stated that the advance is partly due to a real scarcity but the general feeling is that the reason is the almost absolute control of prices by the Standard Oil Company. With a great trust in control of prices it is perhaps dangerouse to predict what the outcome will be, but the general opinion seems to be that prices will now be maintained at a high level. A few paint and oil men talk of dollar turpentine as a possibility. Linseed oil remains steady at present low prices. The volume of business during the week shows a marked increase over last week and as the orders received call for a good range of material prospects from now on are encouraging. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Red Leads.—Genuine red lead, in casks, $4.25; in 100-lb. kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge.—Ground, casks, 5c.; in less quantities, 5 1-2c.; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47c.; 5 to 9 barrels, 46c.; boiled, 1 to 4 bar-

rels, 50c.; 5 to 9 barrels, 49c. Delivered in Ontario between Montreal and Oshawa at 2c. per gallon advance.

Turpentine—Single barrels, 90 1-4c.; 2 to 4 barrels, 89 1-4c. Standard gallon of 8.6 pounds.

Benzine.—25 to 26c.

Shellac Varnish.—Pure white, $2.60 to $2.80; pure orange, $2.60 to $2.80; No. 1 orange shellac, $2.40 to $2.60.

Mixed Paints.—$1.20 to $1.40 per gallon.

Castor Oil.—8 3-4 to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15 1-4c; 1-lb. packages, 16c.; 1-2-lb. packages, 18c.; 1-lb. tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green.—50 and 100 lb. drums, 15c. per lb.; 25 lb. drums, 15 1-2c; 1-lb. paper boxes, 16c.; 1-lb. tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

TORONTO.

The feature of the market is the rapid rise in turpentine prices at Savannah this week, where prices have gone up 4c. in the week. In consequence of this prices have advanced 6c. per gallon on the local market. This makes the price 10 to 11c. higher than at this time last year. The reason for the present strong tone in the market is given in the statistics given out by the Savannah Board of Trade, showing receipts to date of 181,701 bbls. as compared with 280,827 bbls. last year. The receipts on hand are about the same as last year so the supply at the disposal of the trade, the shipments to date, have been only 169,135 against 272,257 bbls. last year. Present prices on the Canadian market are nominal. An advance might result from further rise at Savannah or a decline as a result of outside competition. Linseed oil prices are unchanged. It is noted, however, that orders booked for forward delivery must be signed by the customers and no change will be allowed when delivered as agreed. Higher prices are now quoted on Canadian Paris green. Competition in this line is keen. White and red lead are steadier than for some time. Other lines are unchanged.

White Lead—Ex-Toronto, pure white lead, $4.75; No. 1, $4.30; No. 2, $4; No. 3, $3.60; No. 4, $3.35 in packages of 25 lb. and upwards; 1-2c. per lb. extra will be charged for 12 1-2-lb. packages; genuine dry white lead, in casks, $4.87 1-2.

Red Lead—Genuine, in casks of 560 lb., $4.25 to $4.50; ditto, in kegs of 100 lb., $4.75; No. 1, in casks of 560 lb., $4; ditto, in kegs of 100 lb., $4.25.

Litharge—Genuine, 6 to 6 1-2c.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c. per gallon.

Paris White—90c. to $1 per 100 lb.

Whiting—60 to 65c. per 100 lb.; Gilders' whiting, 75 to 80c.

Shellac—Pure orange, in, barrels $2.45; white, $2.60 per gallon; No. 1, 15c. less; in less quantities 30c. extra, including price of can.

Pumice Stone—Powdered, $2.50 per cwt. in bbls., and 4 to 5c. per lb. in less quantity; lump, 10c. in smal lots and 8c. in bbls.

Linseed Oil—Raw, 1 to 2 bbls., 50c.; boiled, 53c.; 3 to 5 bbls., raw, 49c.; boiled, 52c.; 6 to 9 bbls., raw, 48c.; boiled, 51c., delivered. To Toronto, Hamitlon and London, 2c. less.

Turpentine—Single bbls., 92c.; 2 to 4 bbls., 91c., delivered; 5 bbls. and over, open. Toronto, Hamilton and London, 2c. less. For less quantites than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

Glues—Broken sheet, in 200-lb. bbls., 8 to 8 1-2c. per lb.; cabinet glue, in bbls., 11 1-2 to 12c.; emery glue, in bbls., 17c.; bookbinders', ground, 10 1-2c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

Putty—Common, $1.65; pure, bladders in barrels, $2.25; bladders, in 100-lb. kegs, $2.40; bulk, in barrels, $2.05; bulk, less than barrels and up to 100 lb., $2.95.

Plaster Paris—New Brunswick, $2 per bbl.

Liquid Paints—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

Barn Paints—65 to 70c. per gallon.

Castor Oil—English, in cases, 7 1-2 to 8c. per pound, and 8 1-2 to 9c. for single tins.

English Paris Green—Petroleum bbls., 14 1-4c.; arsenic kegs, 14 1-2c.; 50 to 100-lb. drums, 15c.; 1-lb. packages, 16c.; 1-lb. tins, 17c.; 1-2-lb. packages, 1-2-lb. tins, 19c.

Canadian Paris Green (present delivery)—Petroleum bbls., 14 1-2c.; arsenic kegs, 14 1-2c.; 50 and 100-lb. drums, 15c; 1-lb. packages, 16c.; 1-lb. tins, 17c.; 1-2-lb. packages, 18c.

ST. JOHN

There begins to be rather less demand for burning oil. The very high price and the lengthening days both tend to this result. Lubricatings have attention; prices are firm. This is the line in which there is the chief competition. Linseeds are low but turpentine holds firm. Fish oils are scarce and high.

WINDOW GLASS.

MONTREAL.

Prices on import glass for 1904 are out this week indicating a drop of about 5 cents per box as compared with last year's prices. There is not much activity in glass at present and prices as quoted below are being well maintained

AN ATTRACTIVE PACKAGE

is a great factor when selling ready mixed paints, but unless the contents are to be relied upon, the dealer will not get repeat orders.

ANCHOR LIQUID PAINT

is not only put up in the most attractive packages, but the contents give satisfaction. It is superior to any other, being the only ready mixed paint on the market that contains **BRANDRAM'S B.B. GENUINE** White Lead the standard of the world.

Send us a post card and let us tell you all about it.

HENDERSON & POTTS, Limited, Halifax.
HENDERSON & POTTS CO., Limited, Montreal.

ALABASTINE

'Way back in the Seventies the writer of this ad. was on the road selling "Church's ALABASTINE." It was new then and the universal cry of the dealer was: "You create the demand and we will buy."

Through persistent advertising the work of creating the demand has been carried on until the present time might be termed "The Alabastine Age," for it is a fact that to sell other wall coatings they have to be recommended "the same thing" or "as good as ALABASTINE." TIME, THE NEVER FAILING TEST, has proven our claim of superiority. Kalsomine preparations are good—to keep—and are most prominent—in in the inventory! ALABASTINE SELLS READILY, and at a good margin of profit:

Be wise unto your day and generation, and order ALABASTINE. "Do it now," from any Wholesale Hardware or Paint Dealer, or

THE ALABASTINE CO., Limited, PARIS, ONT.

on what little business is passing. We again quote as follows: First break, 50 feet, $1.70; second brake, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

A fair business is doing, with competition resulting in some cutting. We quote as follows: Star, under 26 in., $3.10; 26 to 40 in., $3.30; 41 to 50 in., $3.70; 51 to 60 in., $4; 61 to 70 in., $5; 71 to 80 in., $4.30 net, Toronto, Hamilton and London.

Window and Interior Displays

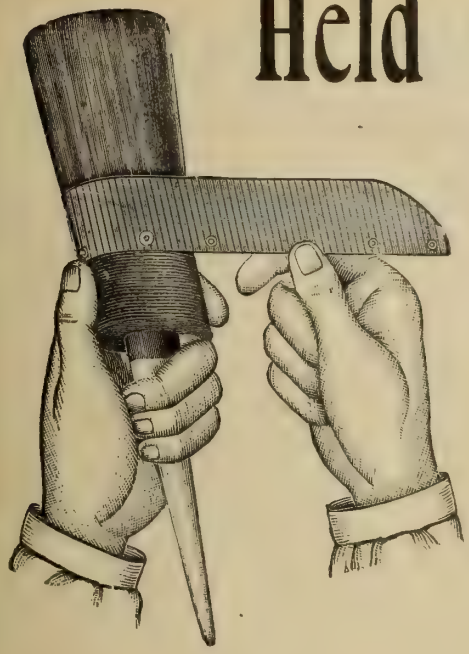
Interior Order.

THE first impression gained by the customer upon entering the store determines the pleasure with which the purchases are made and the amount of future business. If the general feeling is satisfactory, if the mind is not taken up with dodging stock placed helter-skelter over the floor, if the arrangement and order is of such a kind as to impart a feeling of rest, the customer goes about his business with a high regard for the firm and its methods and will return at the first opportunity. The reason for this is easily discovered by the merchant, if he would attempt to analyze his own feelings upon entering any other place of business. The difficulty to be combatted in his case is that in his criticism of the arrangement of another store his mind grasps only particular objects, rather than the general fault, and it will mostly be found to rest really upon the latter. For instance, he will argue conclusively that a certain barrel that is occupying a prominent position in the centre of the floor should be removed to the store-room ; that those boxes or bags on the counter should give place to neater articles or to a clear space ; that the office should not be so near the front of the store where it breaks in on the business appearance of the place. But he does not appear to have resolved all these into the one general criticism—that there is lack of order, that there is in general a thoughtless arrangement of goods.

With his mind satisfied as to the faults existing in his neighbor's place of business, he returns to his own store, observes that no barrel occupies the objectionable position, that his counters are free from boxes and bags and that his office is carefully situated in an out-of-the-way corner, and he then concludes that he is free from the faults seen elsewhere, and is thankful he is not as other men are. At the same time, he may allow a few barrels in positions that are only a degree more suitable ; his counters may be filled up with cartons, samples of bulk goods or other packages, and his office may be even more conspicuous in its unsightly exterior. And his neighbor may come in and congratulate himself that he has avoided mistakes that the first critic has made. Neatness must exist in ever successful store, and to obtain this the stock should be confined as much as possible to the shelves, show cases and fixtures specially made for the purpose.

One Dealer's Experience.

ONE retailer gives an interesting experience as follows : "The ways that you may fix your window are innumerable to appeal to the passers by, and he who stops to look, if you will notice, will almost invariably look for your sign to see who did it and he usually remembers the place. I know, for a year after we had made one display we heard people remark on passing, 'That's the window that got the write-up in the papers.' That window was undoubtedly our master piece and the advertising that we received from it was worth a full page advertisement in any paper. We covered the glass with black cloth and at about the height that the average man could see through we cut two holes and over each we placed the sign 'For Men Only.' Back from the window we made two stalls and lined and covered them with black cloth and had a light in each. In one we put razors, knives, razor strops, cork screws and a can opener, in the other, mechanics' tools. This display was made during one of our carnivals when the town was filled with strangers and the entire town was out each day on parade and sight seeing, and the fun that we had from the window and the appeal it made to the passers by, was by far the best advertising that we ever did ; but we got more from it, than just the look that was given the window. One day a very pious maiden passed the store, saw the sign 'For Men Only,' was shocked, rushed home, told father, a good deacon, the liberties taken during the carnival and related what she termed a disgrace to permit such a show on the main street where even women and boys were looking. Papa's wrath could not be imagined ; off he rushed to the police station, lodged his complaint, and a detail of policemen were immediately ordered to investigate. It took but a minute, and when they returned and informed papa what was exhibited behind the black cloth, with the enticing sign, there was a good laugh and a much disgusted papa. It leaked out, the paper got hold of it, and the write-up of the affair was good money in our coffers. The window did it and the write-up cost nothing. That window wasn't fixed in a half hour, but we were well repaid for our trouble."



Held up for Your Approval

A poor article is no bargain at any price. Doubtless the expert painter realizes this truism about as much as anybody in the world; with him a poor out-of-date brush, upon which he has to spend time in winding by old fashioned methods, means loss of money and inferior work to hisdetriment.

Boeckh's Flexible Bridled Paint Brushes

are the kind that are stocked by progressive Dealers, because they are demanded now by all progressive Painters,

—The bridle can be easily removed and replaced; it is not affected
—by water, oil or paint; it works on a pivot, and keeps the
—bristles elastic.

Don't Take Chances.

Don't take chances of losing your customer by selling him an inferior paint.

You may make money out of him once, but he is gone forever.

Give him a satisfactory paint.

Sell him "Ark" Brand, as our Clarksburg customer intends doing. Read what he says:

Clarksburg, January 9, '04.

MESSRS. THE FRANCIS-FROST CO., LIMITED,
Toronto.

Dear Sirs :—I intend handling your "Ark" Brand paint exclusively this year. I have tried several other makes and have come to the conclusion that for fair dealing and good honest goods yours are the best.

I would like you to send me some of those black and white cuts I have seen in "Hardware and Metal." I want to use them in our local paper.

Yours truly,
T. C. BATTRAM.

Act on Mr. Battram's experience and stock "Ark" Brand Paint. You will never regret it.

HEATING AND PLUMBING

Toronto Plumbers Talk Wages.

DURING the past few weeks committees representing the Toronto Master Plumbers' Asociation and the Toronto Journeymen Plumbers' Union have been in frequent consultation regarding wages. The men are asking for an advance but no decision has yet been reached. It is hoped to have everything settled by February.

The Plumbers' Union have appointed J. Prestly their business agent to succeed David Bell, who is leaving for Winnipeg on Saturday.

Criticizing Toronto Plumbers.

THE efforts of the Toronto Master Plumbers' Association to secure a strong organization have been successful, if the statements appearing in the daily press are to be credited. The Toronto Star has the following this week:

"This Master Plumbers' Association is all right for the big firms, but the smaller plumbers get but little out of it, no matter what price is charged," remarked an independent plumber to-day. "The small man is held up right and left, and he cannot help himself. Some of them recognize the situation and would like to drop out of the game, but the big fellows have such a firm grip upon their necks that they cannot wrest free, but have to hang on and subsist as best they can on the crumbs that fall their way. All the fat contracts go to the big firms. The big firms control the entire situation. When a big thing comes along any little fellow who tries to land it is politely informed that a big firm claims the job, and the association gives it to him.

"You know on a house job so much is added on for each additional tender called by the builder, and the man who gets the contract has to pony up. He takes all the chances on mistakes in tendering, and all other risk, and in the ends gets but little more than the man who just put in a tender on the job. The big fellows are playing both ends against the middle in this game of hold-up. The big firms are all interested in the manufacture of supplies, and they make the members of the association pay through the nose for them, too. . . A comparison of the prices showed exactly the sort of a hold-up the citizens were forced to submit to. A thirty-gallon boiler which cost the ring plumber $5.50 cost the householder or builder $14, installed, yet to install the boiler is a matter of only a couple of hours' work. There are two joints to wipe to install such a boiler. A common tap costs the man in the association 27c., yet he charges citizens $2.50 for putting one in, and any plumber can put one in an hour. An overflow basin costs 60 cents. To put it in is a matter of two hours' labor and ten cents' worth of plaster paris, yet the ring price for the job is $3.

"The tariff of the Master Plumbers' Association calls for $1 a light for gas," remarked this independent plumber. "I have been putting them in right along for 70 cents a light, and making money, too."

Evidently there are a few sore heads in Toronto. They exist everywhere.

Montreal Plumbers Busy.

THE Christmas holiday week and the first two weeks of the year which are ordinarily very quiet weeks for the plumbers have this year, on account of the prolonged cold snap, brought them a harvest of work. A prominent Montreal plumber assures "Hardware and Metal" that not for years has this season of the year seen plumbers in Montreal so rushed with work. The work has consisted in repairing the injuries wrought by the ravages of Jack Frost and the supply houses report an unprecedented demand for iron pipe.

Of new business apart from these repairs, there is practically none at present in the hands of Montreal plumbers and a few quiet weeks may be expected. Prospects are, however, considered very satisfactory as the number of building permits issued during the last few months indicates a busy season in the building trades. Very few contracts for plumbing have been let so early in the season, but quite a number are bound to be assigned in the very near future. An examination of the list issued during the Summer and Fall shows that nearly all permits have been for dwelling houses. Very few permits have been issued for large buildings. Now a large "skyscraper" means work for some plumbing firm equal in value to that on a great number of residences, but it is not apt to be distributed among a number of firms. Hence although there are very few prizes of this sort to be secured by Montreal plumbers there should be a fair amount of work for all concerned on the numerous residences to be erected.

The journeymen's union seems to have been taken by surprise by the prompt action of the master plumbers in refusing to treat with them as a union. The agreement of the master plumbers, published in a recent issue of "Hardware and Metal" has been signed by practically all the master plumbers of the city. They are standing together well and it seems likely that they will score their point in the present dispute. There does not seem to be any disposition among the master plumbers to reduce the wages of their journeymen. A number of them have expressed their intention to raise the wages of their more competent workmen. But there is a determination expressed on all sides that under no circumstances will the union be recognized. The master plumbers are determined to reserve to themselves the right to employ any journeyman whether a member of the union or not, and they will treat with their journeymen only as individuals, not as a union.

Disposal of House Sewage.

THE articles on "The Disposal of House Sewage for Farm Houses," by M. J. Quinn, Toronto, in the October 24 and 31 issues of "Hardware and Metal," attracted general attention.

Several enquiries have been received since their publication, such as: "Is the septic tank system practicable in Northwestern Canada where the ground in Winter freezes to a depth of from four to six feet? Would not the sewage in the tiles freeze? (2) Would not the inlet pipe conduct the smells arising from the tank back indirectly to the different rooms, even considering that it does run to the roof?

In answer to the first question, it may be stated that there are a considerable number of "septic tanks" in operation north of Sault Ste. Marie, where the temperature in Winter goes down to 40 degrees below zero, and that these have given perfect satisfaction. Mr. Quinn, author of the articles referred to, says the sewage in the tiles will not freeze because the hot gases of decomposition given off, together with the presence of a large percentage of salts and ammonia, keep the liquid sewage at a temperature always as high as 58 degrees. In answer to the second question, Mr. Quinn states that traps effectually prevent the rise of bad smells from the tank to the rooms of a house. Of course it is taken for granted that the inlet pipe running also to the roof. The gas or air in this pipe being warm has a tendency to rise. This causes a suction which takes up any gas that might be lingering about an individual trap. In addition every fixture has its own trap. There must be no trap between the septic tank and the roof but a free passage in inlet pipe.

DUNDAS AXE WORKS,

DUNDAS, ONT.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE Rainy River Curling Co., Rainy River, Ont., have been incorporated with a capital of $10,000, to construct and operate a curling rink. The directors are D. Robertson, H. Carson, J. A. Mathieu and Jas. Clarkson, all of Rainy River.

The Telford Lumber Co., Prince Albert, Saskatchewan, have been incorporated with a capital of $368,000, to build and operate saw mills and to carry on a general lumbering business. The directors are J. N. Telford, D. H. Telford, H. A. Beard, J. W. Telford, all of Prince Albert; W. A. Telford, Benson, Minn.; and Mary Jane Telford, Winnipeg.

The Canada Inspection Co., Montreal, have been incorporated with a capital of $10,000, to inspect railroads, bridges and structural materials, and to furnish experts in matters involving knowledge in civil, metallurgical and chemical engineering. The directors are T. F. Griffiths, F. A. Bickerdike and P. C. Ryan, all of Montreal, and A. A. Wighton, Toronto.

The large mill that The Canada Corundum Co. are erecting at Craigmont, Renfrew County, is now almost completed and will be in operation in the course of two weeks. It is claimed to be larger than any ore concentration mill in Canada. Its capacity will be 300 tons per day. The mill has been built on the unit system, and its capacity can readily be increased if necessary.

A London, Eng., despatch says that British iron firms are greatly interested in the arrival at Glasgow yesterday of a cargo of Canadian pig iron from Cape Breton. No shipment of Canadian iron has reached Glasgow for almost two years, due to the fact that Canadian producers have secured better prices at home and in the United States. This import also marks the drying up of British shipments to America.

——

COMPRESSED AIR VS. STEAM.

The Corporation Trust Co. have offered to supply Toronto with electrical power at one-half the present cost. In connection with this offer Mr. B. Sawyer says that the company had already an experimental plant at Sorel, and was building a much more extensive plant at St. Lambert, across the river from Montreal.

Mr. Sawyer explained that the company generated power which produced cold compressed air. This was delivered into ordinary steam engines and generated electrical power. As the cost of compressing the air was not one-tenth of the cost of producing the same power by steam, the company could afford to sell power at one-half the prevailing rate.

Mr. Sawyer added that the company was prepared to carry out its offer.

——

NOTES.

Collingwood and The Cramp Steel Co. will seek to have their agreement altered.

Orillia wants to raise $100,000 to spend on its electrical power transmission works.

The Schomberg and Aurora Railway Co. wants the Township of King empowered to pay it a bonus.

The Lanark County Council intend buying road-making machinery and to spend $97,000 in building 120 miles of road.

North Bay wants to raise $50,000 to meet floating debt, to build a town and fire-hall, and to extend the waterworks.

The Hamilton, Beamsville, and Grimsby Railway wants a by-law confirmed and power to build branches and establish parks.

The Sandwich, Windsor, and Amherstburg Railway wants a bond issue of $600,000 confirmed. It also wants to take over the Windsor system.

J. H. Coburn, Walkerville, applies for a charter for an electric railway from Windsor, via Walkerville, to Chatham, "with power to operate on Sundays."

It is said that the outlook for the Picton coal fields is very promising. It has been predicted that within three years there will be an output of 800,000 tons.

The Strathroy and Western Counties Railway will seek power from the Ontario Legislature to extend their authorized line through the city of St. Thomas and on to Port Stanley.

Laidlaw, Kappele & Bicknell, solicitors for The Lake Superior Power Co., etc., apply for legislation to confirm a Sault Ste. Marie by-law (No. 398), and confirming the agreements entered into by it.

Hodgson, Sumner & Co., Montreal, have been incorporated with a capital of $1,000,000, to carry on a general dry goods store. The directors are J. Hodgson, G. Sumner, J. Gardner, W. C. Hodgson and F. Sumner, all of Montreal.

The Brantford and Erie Railway Co. will seek incorporation. It proposes to build a line from Brantford, via Waterford and Simcoe, to Port Dover, with a loop line from Waterford, via Delhi and Lynedoch, to Simcoe.

The A. B. Saylor Canning Co., Bloomfield, Ont., have been incorporated with a capital of $10,000, to manufacture and deal in canned goods. The directors are A. B. Saylor, C. H. Saylor and C. M. Yarwood, all of the township of Hallowell.

The Schierholtz Zinkaun Co., Waterloo, Ont., have been incorporated with a capital of $50,000, to manufacture and deal in furniture and mattresses. The directors are Emil Schierholtz, H. S. Zinkaun, both of Waterloo, and E. Zinkaun, of Berlin, Ont.

Hodgson Bros., Montreal, have been incorporated with a capital of $250,000, to take over the business of Hodgson Bros., of Montreal. The directors are A. J. Hodgson, H. A. Hodgson, H. A. Olive, all of Westmount, Montreal; J. H. Hodgson, New York, and J. J. Towers, Montreal.

The Montreal Transportation Co., Montreal, have been incorporated with a capital of $500,000, to carry on a transportation business. The directors are B. McLennan, G. M. Kinghorn, T. A. Crane, A. E. Ogilvie, F. Robertson and A. Kingman, all of Montreal, and B. M. Britton, Toronto.

The Clyde Forks Lumber Co.'s mill at Clyde Forks, on the Kingston and Pembroke Railway, was burned last week, and a carload of stored hay was destroyed. The cause of the fire is not known. The fine structure was completely destroyed. The loss is $10,000, with a small insurance.

The Sangame Electric Co., of Springfield, Ohio, will open a factory for the manufacture of electric meters in the White block, Windsor, Ont., about the middle of January. The factory will employ about 15 men at first, but this number will be increased as soon as the factory is better equipped.

A deputation of carriage manufacturers waited on the Government on Tuesday to ask that a minimum valuation be applied to what are known as shop buggies when imported into Canada, so as to prevent their coming in here at a nominal valuation to compete with the well-made product of Canadian factories.

A London, Eng., despatch says that a company of prominent capitalists are sending experts to Canada to prospect the country for water power, with the object of utilizing it for electrical purposes. One of the aims of the capitalists is to supply Toronto with water, as well as electricity.

USE OF CEMENT.

A NEW YORK commercial paper, in a lengthy article, discusses the many uses by which cement is now put, and to the convenience and helpfulness of the building trades.

Only a few years ago, it remarks, the use of concrete was confined to building foundations, vaults and structural work of a primary character. The closing year witnesses such phenomenal achievements in the application of this manufactured product as to cause almost a revolution in many leading departments of structural work, embracing high office buildings, dwellings, public works, municipal improvements, railroads, factories, farming, submarine, mining, ornamental and recreation ground construction.

Next to the exploitation of electricity there is perhaps no other field in which American genius has made such rapid strides during the closing year as in the new uses made of concrete and reinforced concrete cement for structural work. By reinforcing concrete with embedded steel rods, bars or wire rings this article has become almost indispensable in every component part of high buildings. In fact, the present year witnesses the completion of skyscrapers made entirely of reinforced concrete, including girders, walls, floors, roofing, foundations and piling.

A NEW USE FOR ALUMINUM.

ALUMINUM has a new field of usefulness, says The New York Tribune. The key to the function which aluminum performs in metallurgy and engineering is found in the remarkable heat that is suddenly developed when it is burned. Combustion, it will be remembered, is simply the union of a given element with oxygen. When wood or coal is set on fire the carbon combines with that gas and produces carbonic oxide. Aluminum will not unite with atmospheric oxygen, though. It is necessary to supply the element in a solid form. The oxide of some other metal furnishes this. If equal parts of aluminum and the oxide of iron, both pulverized and cold, are placed in a crucible, and a tiny fuse of the right kind is applied, a marvellous effect is produced. The receptacle becomes a furnace. By purely chemical means a temperature is induced which rivals that of the electric arc. Within a minute or two the aluminum steals the oxygen from the iron and the latter is melted. If, in advance, and with a view to further operations, the iron is charged with the proper amount of carbon or some other element, the product is a steel possessing qualities that adapt it to some special services.

One highly practical operation made feasible by the process here described is the welding of rails on trolley roads. In order to employ both the main track and the third rail (if there be one) as electrical conductors, it is customary to be one of two things. Either a copper band is attached to the ends of adjacent rails at each joint, or a little molten iron is poured around the cold steel there. The latter operation, as formerly conducted, involved the use of cumbrous and expensive apparatus. In Europe aluminum is now used to some extent instead. A small portable crucible, tapering to a point, is adjusted over the right spot, a mould is formed around the joint to be welded, the proper mixture is ignited and almost immediately a supply of liquid steel is ready to be run into place. So intense is the heat of the latter that it dissolves part of the metal of which the rail is composed, and a joint of surprising strength is created. Here, again, aluminum figures as a rival of copper, and it promises to make the old style of bond unnecessary.

When one has once grasped the simplicity and effectiveness of the new process, as applied to electric railways, he will be quick to see how helpful it can be in repairing great castings or forgings like the sternpost or crankshaft of an ocean steamship. It will often happen that work of this kind can be performed at sea; but, even if it is delayed until the end of a voyage, the necessity for going into a dry dock and a resort to the services of a forge can usually be avoided.

BUILDING NOTES.

Keith & Fitzsimons, Toronto, are installing plumbing and heating fixtures in the new plant of The International Harvester Co., Hamilton.

The contract for supplying The William Davies Co.'s new addition to their manufacturing plant, East Toronto, with automatic sprinklers has been given to Bennett & Wright.

Chadwick & Beckett, architects, Toronto, are getting out plans for interior alterations in the premises of The Holmes Electric Protection Co., of Toronto, 5 Jordan street.

G. W. Gouinlock, architect, Toronto, is supervising the construction of the magnificent new Foresters' Orphans' Home building, now in course of erection at Foresters' Island Park, Deseronto.

AN APPRECIATIVE SUBSCRIBER.

Editor "Hardware and Metal":—Enclosed please find postal note, for which you may continue sending me your weekly instalment of "Hardware and Metal" diet. I have for the past dozen years or more been accustomed to receiving the above and I have always found it a great helpmeet from the time of my apprenticeship in the hardware store to the present day, as travelling representative of a leading Montreal firm.

THE OFFICE

DEVOTED TO THE OFFICE STAFFS OF BUSINESS ESTABLISHMENTS

DEBTORS WHO ARE SLOW BUT GOOD.

By J. J. Rutka.

EACH individual case usually requires different and separate treatments. We have on our books a few just such accounts, good but slow pay. In most cases we find that writing personal letters from time to time to the head of the firm of such an institution, and setting a definite amount which we want him to send at a stipulated time has the best results. As far as possible a personal interview is desirable. We find people of that kind frequently pay promptly in certain directions, while they let other accounts run along. This is often done, as we have discovered, in this way: A firm will pay the man who presents the best case, before they will pay the man that uses ordinary methods. We have a case of that kind on hand just now. A firm owed us an account. They are good for ten times the amount they owed. They did not pay us, because they claim we did not need the money as badly as some one else whom they owed. A personal interview, however, has resulted in making an arrangement with these people, whereby they have paid us a part immediately, and a stipulated amount every two weeks thereafter, so the amount is paid up, and it was done with the best of feelings on both sides, and they continue to send us their orders daily. We find that by adding interest to overdue accounts frequently helps the case.

We have found that coaxing letters, in most cases, are the best, and next to a personal interview, the most effective. In most cases we have pleaded that we were very hard up, and needed the money, and that has had its effect. We rarely ever find that a demand accompanied by a threat has ever done any good. It may help to collect an account, but it loses you a customer sure. Still there is now and then a cese where even a lawsuit has to be resorted to. We have also found that where a customer was good but slow pay that by holding up his orders, and writing him that, until he paid the old bills, his new orders would not be filled, has in some cases a good effect. You see, therefore, that there is no rigid or regular set form which can be followed in a cese of that kind.

We have a customer whom we consider good that will never pay a bill until the same is handed to a collector, or a justice of the peace, nor will he buy any goods after the account has been running sixty days until such an action is taken. This man will come to town regularly on receiving a notice from the collector, and pay his bill, and on the same day present the receipt at our office and buy more goods. We have repeatedly told him that we would not sell him goods at as close a price as if he paid in regular time, but it seemed to make little or no difference to him.

In this connection I wish to say that we have some customers who take extraordinarily long time, but are perfectly good, to whom we have written that if they continued to take such extra long time we would have to charge them more for their goods; and in making the invoice we add 5 per cent. to the net amount of the invoice, and write them with the invoice, saying, if paid in sixty days they can deduct the extra charge; if paid in ten days they can deduct the cash discount in addition to such deduction; but if the account runs more than sixty days the total charge will stand. We have found this method very beneficial in some cases. This method, however, has to be used with caution, as it will not work with everybody.

I find, however, that the coaxing method is perhaps the very best one in ninety-nine cases out of one hundred.

USEFUL AUDITING DEVICE.

IN many large business houses it is now the custom, according to The Bookkeeper, to send out at regular intervals a notice similar to that appended, the object being to compare the ledger balances with those appearing on the books of the customers. It will be noted that a special stamped envelope is enclosed for the reply, which is usually directed to the business address of the accountant who has the audit in charge.

Your debit balances on the books of this Company.....190..is $..... Kindly compare this with your books, and state below whether it agrees or not. If any difference should exist please state amount of difference and, if possible, the items making same.

This is sent not as a dun, but for the purpose of enabling us to verify our accounts and check up our books correctly. Please reply on form below, and return this sheet in stamped envelope enclosed.

Your credit since above date are as follows:

Gentlemen:

Balance as shown above $.....is .....not correct.

.....190..

Signed.....

A SIMPLE SUM IN ARITHMETIC.

SUPPOSE, says World's Work, a big company is organized and issues bonds and stocks on the following basis:

Things capitalized	The percentage of stocks and bonds represented by them
Real value	25
Pure water	50
Promoters' shares	10
Increase over real value because of "flush" times	15

Now, what happens when the fabric of speculation is shaken? The 15 per cent. of "flush-times" valuation fades away; the 10 per cent. of promoters' profit shares are remembered and the public resents such a distribution of them; people begin to ask how much pure water went to the making of the whole organization—they recall everything, in fact, except the real value. The stock, therefore, that is really worth 25 per cent. of its par value, if honest management be assumed, falls far below 25 cents in the market.

This very elementary and simple "sum" in arithmetic, explains many "mysterious" things that have been happening in the stock market. Nothing is so hard to manage as a suspicious public; but whose fault is it that the public became suspicious?

Speculation runs away with industry for a time, but industry gets its revenge at last.

THE MANAGER AND HIS MEN.

"A MANAGER must know his men through and through" remarks a writer in a contemporary. "He must recognize their strengths and weaknesses, and act accordingly; one man may be extremely sensitive, another too conservative, another too susceptible to flattery and easily influenced.

"Another too free a buyer, another may be entirely incapable of appreciating figures, and so on, but each may be otherwise excellent. To get the best out of these men these special points of character must be considered.

"And then the development of these, the making of intelligent, thinking men and women out of inexperenced and immature lads and young women; the studying of the peculiar qualifications of each, and the placing of that one so that the peculair trait will count to his advantage and to that of the house; to encourage the earnest young woman who needs encouragement just at that moment, to bring down to the earth that young man who has been spoiled at home, and like poor Hetty in Adam Bede, of whom Mrs. Poyser said, 'She is like the cock who thinks the sun rises to hear him crow,' to watch the hundreds of points and factors in management of men, is but part of the duty of each who is in charge of a large business.

"Then this same man must be an expert on figures and percentage, for after all a large business must in its figures depend almost entirely upon percentage. He must be able to look many ways at once, and must in a way keep in touch with the commercial news of the country in his spectral line. He must be broad, not narrow; quick, not slow; thoughtful, not impulsive; energetic, not mentally or physically lazy; conservative to that fine point of correctness, not hysterical; bold, not timid; agreeable and tactful, not antagonistic; approachable, not repelling; just, never unjust.

"He must be possessed of good common sense, good judgment, in order to hold the respect of those with whom he is constaly advising. If, for example, he is manager of merchandise, he must be a judge of merchandise and values, and must be a natural trader. If in charge of employes, he must be a quick judge of human nature and possess an ability to discover the qualities of each one's mental and physical self. If in charge of systems, an inventive mind is necessary, but with it is necessary also a practical mind, and one which quickly separates the good ideas from the faulty ones.

"To those who conduct the business as a whole comes the necessity of selecting a set of men, who, when selected, should really form a cabinet with whom to advise daily, hourly, concerning matters of moment. Then the chiefs of the business must frame a policy, a line of action, just as do the owners of a ship decide on her course and final harbor, and as the captain of the ship must direct the man at the wheel and guide her past the many dangers of the sea, so those who are responsible for the conduct of a business must push that business with greatest speed, but must watch its daily course, and must avoid sunken reefs and derelicts, must go slowly during the foggy times, and keep it steady when the storms threaten.

"A merchandising business is pre-eminently a business of infinite detail, and that man, no matter how capable and how energetic he may be, who undertakes to do it all alone will limit that business, just as every man's day is limited in the number of its minutes. The biggest man is the man who can most easily utilize the ability of others; so that retail business is best conducted, which can profitably unite to itself the greatest number of thinking, intelligent, active men and women, each one being, not a cog in the machinery, but an independent, self-confident unit, a member of the organization, a loyal and enthusiastic worker whose daily results bring respect and recognition. To obtain this, is a profession, science, or an art."

——

STOCKTAKING.

"BETTER late than never" is good advice as to stocktaking, as it is concerning many other things, remarks a contemporary.

A tradesman cannot tell his exact worth from his ledger, because he does not know what quantity of stock he has in his store. To know this it is necessary, periodically, to take stock or prepare a balance-sheet.

A balance-sheet is a condensed statement of the merchant's assets and liabilities, made out to show how his affairs stand, and what amount of money he has made since he began business or since the previous inventory.

His assets are the balances or moneys owing to him found on the debtor side of the accounts in the ledger—the amount of cash he has in hand, the stock in the shop, the value of the goodwill and the fixtures, etc.

His liabilities are the balances or moneys owing by him found on the credit side of the accounts in the ledger. The difference between the assets and the liabilities is the amount of money he is worth.

I preparing a balance sheet the first thing to do is to enter in a book kept for the purpose all goods in the store, and all goods lying to order of which the invoices have been received. The net cost price of every article should be put down, and the amounts carried out and added up, and the amount entered on the left-hand side of the balance-sheet as "stock."

The accounts owing by customers, which are found on the debtor side of their ledger accounts, are then added up, and the discounts, if any, deducted, and the net total entered on the same side of the balance-sheet as "book debts." The cash in hand should then be counted, and the amount entered on the same side of the balance-sheet as "cash on hand."

The value of the good-will and fixtures should then be put down. It is best to deduct from the value of the fixtures at the rate of 10 per cent. per annum at each successive stocktaking, so that at the end of ten years the fixtures will not be put down at all, as they will be worn out and have become worthless. If the tradesman has a banking account he puts down the amount of the balance in his favor on the same side of the balance-sheet. If he has money invested in property or any other securities, the amounts are also put down. All the above are called his assets.

On the other side of the balance-sheet he puts down his liabilities, which are the sum total of the amounts owing by him found on the creditor side of the ledger, and any other moneys he may owe. Both columns are then added up, and the difference of the accounts is what he is worth.

By this means a tradesman can tell exactly what amount of money he has gained in a given period. Some authorities urge that stocktaking should be done every three months, but there are other houses that are satisfied with a half-yearly inventory, although many firms take inventory only once a year. The oftener the better, for it checks stealing and other leaks.

This list is for the purpose of placing retailers, manufacturers' jobbers and other readers in touch with reliable and competent accountants and auditors whose services are so frequently required for such purposes as opening books,

A Word of Thanks to Our Customers.

The past year's business has been very satisfactory to us, and we are exceedingly obliged to you in consequence.

We have done our best to please you at all times, and where we failed it was our misfortune, not our fault.

Prospects are bright for another prosperous year, and we hope to continue our pleasant business relations with you.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the on rolling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WHY sell Old Style Cork Screws?

The People Want

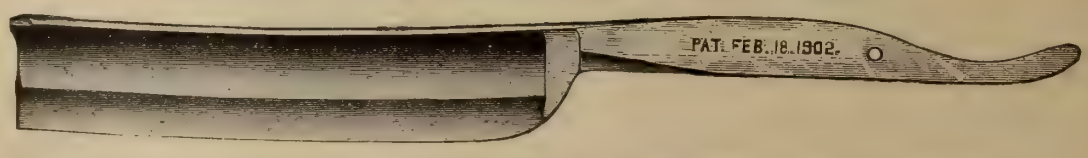
WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

EVOLUTION IN RAZOR GRINDING.

English full hollow ground.



German full concaved.

THE AMERICAN DOUBLE HOLLOW.

Have you ever seen a razor too good to be used on your face?

The old-fashioned way to grind a razor was the English full hollow, but it was found that, if ground thick, it was harsh on the face, if very thin it would vibrate or would not shave clean.

About 30 years ago a new style of grinding was invented, the German full concaved; this was found better; it had only one fault, being thick above the edge it cannot easily be kept sharp on a strop, you have to hone it very often. We are making a newly Patented Razor, the American Double Hollow, which has two distinct hollows. This razor, if properly used on a strop, practically never needs honing, because it is so thin above the edge. Try it and you will be more than pleased.

GEO. W. KORN RAZOR MFG. CO., *LITTLE VALLEY, N.Y. U. S. A.*

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

GOLDEN CROWN,	500	"	"	"
STANDARD,	500	"	"	"
SISAL,	500	"	"	"

Blue Ribbon is no doubt the Queen of Binder Twine. It runs six hundred and fifty feet to the pound, and is manufactured from most select Manila Fibre. Six hundred and fifty foot Twine is the only Twine manufactured entirely from Manila Fibre. Dealers should beware of so-called "Manila" Twines which are advertised to measure less than 650 feet to the pound. They are mixed Twines.

HIS TROUBLES.

A horse's hoof troubles are not of his own making. He does not go lame because he has lameness in his blood. Medicines will not cure lameness. You may sell an article for the soles of a horse's hoofs that will prevent many kinds of lameness and cure most kinds.

The Dunlop Improved
"Ideal" Horseshoe Pad

affords the most practical means obtainable to-day for saving the progress of all forms of lameness. It is the only thing for navicular disease. These pads are something that you may profitably carry, because we will be delighted to turn our orders over to you. They are coming in by dozens with every mail.

Write for "Horseology," the cleverest trade booklet of the season. Trade prices on application.

TAYLOR-FORBES COMPANY, LIMITED

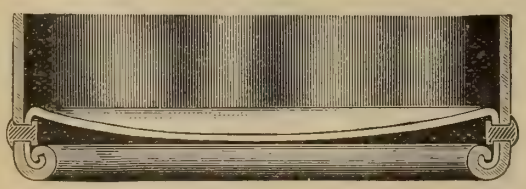
Branch—9 De Bresoles Street, **Montreal, Que.**

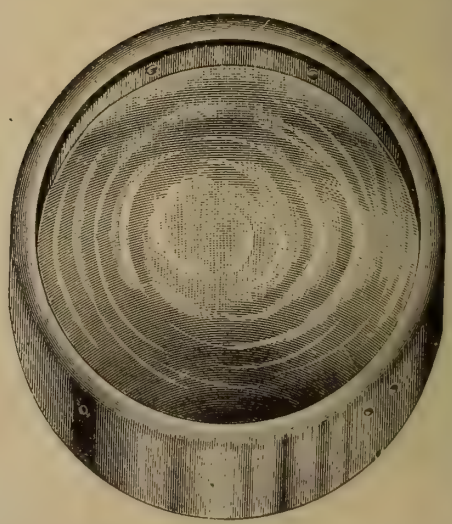
Head Office, **Guelph, Ont.**

THE LARGEST AND BEST EQUIPPED HRADWARE FACTORY IN CANADA.

THE BEST RESULTS ALWAYS FOLLOW THE SALE AND USE OF

KEMP'S BROAD HOOP ROLL RIM BOTTOM MILK CAN TRIMMINGS





A criticising public have used them for the past five years and the increasing demand is proof of their superiority, also evidence of the satisfaction which they give

The Roll Rim Bottom having no sharp turns does not break the grain of the metal or lessen its wearing qualities.

Narrow Top Hoops can be supplied in place of Broad Top Hoops if desired.

For Strength, Durability and Finish our Trimmings are unexcelled.

They cost no more than inferior qualities.

We also carry in stock a full line of **First Quality Tinned Iron,** cut suitable for the different size of Trimmings, which we will supply at the lowest current market quotations.

KEMP MANUFACTURING CO., TORONTO, CANADA.

RETAIL HARDWAREMEN SHOULD ORGANIZE

DURING January and February the retail hardware trade of Canada have probably more time for solid, practical thinking, than at any other season of the year. Doubtless this opportunity will be taken advantage of by the great majority of them to perfect their plans for the coming year. Stores will be enlarged, remodelled, or rearranged; advertising campaigns will be studied out, a full consideration of new lines suggested will be given, and those thought likely to yield fair returns will be added to the stock-in-trade. In every way the progressive merchant will "prepare for war in times of peace."

Yet, while the hardwaremen have in the past perfected their plans for improving and extending their individual business, they have not yet taken up a consideration which is every year becoming more pressing—the need of organization within the trade.

The day for bitterness, jealousy and meanness between business rivals has gone by, has been superseded by a spirit of organization, which has completely revolutionized business methods in many branches of trade. Combines, trusts, consolidations and pools on the one hand and a widespread development of trade unions have created new conditions, which affect all classes of people, the consuming public in particular, and various business interests in particular.

Moreover, in Canada the manufacturers in many lines have gotten together and formed associations to control the selling prices of their products. It is worth recording in the connection that up to date these associations have been conducted along fair, legitimate lines.

The wholesale hardware dealers of the Dominion have, however, found it advisable to organize the "Wholesale Hardware Association" to protect their interest.

The fact that the relations between the manufacturers and the wholesale dealers are even more cordial than previous to the organization of the various associations, is one of the strongest proofs of their practical suitability for the ends they were called into being to effect. It has been possible for representative manufacturers and jobbers to meet, to thresh out their differences in a more or less friendly way, and to ultimately come to an understanding which is satisfactory in large measure to both parties.

Naturally, however, in these consultations the interests of the retailers will not be uppermost in the minds of either parties. Thus has been created a condition which calls for organization by the retail hardware trade of Canada.

Prominent members of both manufacturers' and wholesalers' associations in Canada have united in the expression of opinion that the retailers could serve their own interests to better advantage and could simplify their relations with the other branches of the trade by organizing.

In the United States all three branches of the trade are organized. At the recent convention of the Wholesale Hardware Association of the United States, held at Atlantic City, the speech which attracted most widespread attention was one by Mr. Bogardus, president of the Retailers' Association (This address was reproduced in "Hardware and Metal" at the time). In other ways the presence of retailers at the wholesalers' convention was of real value to both branches represented. The same service could be given in Canada. The wholesalers and manufacturers are fair enough to recognize the rights of the retailer and wise enough to consider his interests. Yet they themselves have seen the need of representation from the retail trade if the most satisfactory results are to be secured.

Throughout the United States the retail trade has become excellently organized. The parent body is the National Retail Hardware Dealers' Association. In addition to this there have been many state organizations. To the secretaries of a few of these "Hardware and Metal" has written, asking if the associations had been found to be of real service. A couple of the replies received will be allowed to speak for themselves:

Editor HARDWARE AND METAL,—

Your favor to hand and am pleased to comply with your request. Enclosed herewith I hand you a copy of our constitution and by-laws, also application blank and membership card. The first good results which we obtained from our state organization was the formation of a local organization in this city, which has proved beneficial in securing better feeling among the dealers, better prices for our goods, and more satisfactory service to the general public. Our organization here has not tended to make competition any less brisk, but all of the dealers have more regard for the rights of other people.

Our meetings help to place things on a more equitable basis, as all questions are brought up in the meetings, thoroughly discussed, and are settled by a majority vote. This same condition applies to small towns where there are sometimes not more than two dealers.

The advantages which we offer our members consist in securing more consideration from the railroad company, more consideration from the jobbers, and more consideration from the manufacturers, by reason of our affiliation with the National Association.

The local organizations are not affiliated with state associations, but we have found that the state association promoted local organizations, and better results can be obtained by local organizations through state associations, and more recognition received by state associations by reason of their affiliation with the National.

The above are only a few of the minor benefits, and if you are successful in perfecting an association of hardware dealers in the province of Ontario, we will be glad to give you all possible help in securing such benefits as are hel ful to this business.

H. J. HALL,
Secretary of The Nebraska Retail Hardware Dealers' Association.
Lincoln, Nebraska, U.S.A.

* * *

Editor HARDWARE AND METAL,—

Replying to your favor regarding operation of our State Association, I am pleased to enclose you herewith a copy of our by-laws, constitution and roll of members. We claim that in a union of any kind there is strength, and this is one point I have made a special effort of to keep before our members.

We offer no inducements to the hardware dealers of Ohio further than that we will take care of all such reasonable complaints against manufacturers and jobbers that hurt retail trade. We make a special effort to have interesting programmes for our conventions. These programmes consist of papers or talks on subjects pertaining to our business.

D. R. BURR,
Corresponding Secretary Ohio Hardware Association.
Piqua, Ohio, U.S.A.

* * *

It will be seen from the above that in the two states, Ohio and Nebraska, good work is being done. This is evidently the case in several other states as far as can be judged from the reports of the conventions and from the letters from those connected with them.

"Hardware and Metal" is convinced that there is a general desire on the part of many retailers to have such an association established. If you have any opinion on the subject, send it in for publication.

OUTLOOK FOR BRITISH COLUMBIA LEAD INDUSTRY.

Written for HARDWARE AND METAL by Henry Sherwood, C.E., Sutter Creek, Amador Co., Cal.

THE lead industry in British Columbia has been dependant on the American Smelting and Refining Trust for treatment of ores, the plants in Britsh Columbia being totally inadequate for handling the desired output from the mines. Through the refining being chiefly done in the United States the manufacturing of all lead products, other than metallic lead, has been nil, causing large imports to the Dominion of white lead and colors, whilst these goods could be produced in British Columbia and laid down in the consuming cities of Canada at much lower prices than imported goods, and of the very highest quality, were the necessary plant erected.

The prices of these manufactured goods depend upon the prices paid to the lead mines for their ores by the smelters. The United States tariff prevents lead and its products from entering there. Therefore the London market price (less freight) will continue the standard of lead prices in British Columbia. This has averaged £11 17s. 3d. per ton for 20 past years—1903 being about 9s. per ton below average. The present price of about £11 2s. 6d. (less freight) brings the soft leads in British Columbia to $41.75—on which are smelting and refining charges of about $34 on the pig lead produced; leaving the value received by the miner under $10 per ton of lead contained in the ore. The future prices of lead cannot be expected to range higher than the past London average.

To consume her lead the role of British Columbia is plainly not to send her metallic lead in any form to Eastern Canada, because the mines of Ontario can do this with half the freight cost. But the seaports bordering the Pacific ocean have become large purchasers of lead, especially China and Japan. These with India take also much thin tea lead. Also the Pacific ports of Mexico, Central and South America take metallic leads, and all take a considerable aggregate weight of white lead and colors, which are now chiefly supplied by San Francisco manufacturers, at prices from $40 to $65 a ton higher than the same goods can be sent out from Vancouver; which port has equal transport facilities with San Francisco. In consequence of the lower prices at which all the leads and products can be sent out, this whole Pacific trade belongs of right to Vancouver. Again, the climate of the Pacific coast is most favorable to chemical and color making through the whole year; making and drying being able to proceed without interruption or damage. White lead and all paint colors can be supplied from British Columbia to Eastern Canada of distinctly superior qualities and at lower prices than can ever be made there. The role of British Columbia is therefore to treat her own ores, to supply metallic leads to all Pacific ports, to manufacture all lead products and supply them to the markets of the Dominion as well as to Pacific ports. For all these operations, the Pacific coast of British Columbia offers great economy, such as cannot elsewhere be found. Power and fuel at excessively low prices; natural chemicals at hand and delivered on salt water at your door; rail and steamship to every consuming market; raw materials all at home, at prices unequalled anywhere; facilities for reducing and refining metals bringing the cost to the very lowest limits—being chiefly cost of power and fuel, and this feature will itself ensure the supply of ores to be always large, at prices elsewhere impossible.

All large businesses are most healthy grown from small beginnings. Eastern Canada can now take 5 to 10 tons of white lead a day, irrespective of lead colors—provided that the quality be high class, and that the prices laid down in Montreal, Toronto, etc., be lower than imports of equal grade. The manufacture of these will form a safe nucleus for a future business, and pay an ample constant dividend on capital employed, from the first day of operation, thus allowing gradual extension and erection of plant without loss by delay. In commencing the business, in order to get rapidly into work, pig lead would probably be first employed, with smaller profit whilst refining plant were erecting. Whilst thus acting, the white lead could be put on board ship or railway at $2 per 100 lbs., against the wholesale exports from San Francisco of $6.50 (costing them about $5), or the same laid down in Montreal or Toronto at a cost of $3.05 per 100 lbs. dry white lead. The London market price for refined soft lead is $41.75 f.o.b. in place of San Francisco price of $90. These contrasts of figures are given merely to show the possibilities for profitable business in British Columbia and the magnitude of a business conducting its own reducing and refining of metals.

The writer is an English manufacturing and mining engineer, 30 years conversant with the lead industry and color making, has during two years past sifted the whole situation in British Columbia and spent last summer in Britsh Columbia preparing the way for establishing such a business; securing valuable salt-water frontage on Burrard Inlet with railway facilities, and obtaining desired privileges. Capital can be obtained partly in San Francisco and Vancouver to co-operate with Eastern Canadian manufacturers, who are desirous to invest; especially of consumers of such products, one of whom would be desired to take the commercial management, paying and receiving all moneys, whilst the writer builds up the plant, for reducing and refining ores, and manufacturing required products. He will be in Vancouver early in the Spring (D.V.) to commence the plant to supply the Summer demand of Eastern Canada for white lead, etc.

The business may be expected to grow to a magnitude ranking with the largest and leaving nothing to be further desired in its ample and permanent dividends.

CHANGE IN MANAGEMENT.

Harlan P. Hubbard, who opened a sales agency at Toronto, Ontario, a little over a year ago for E. C. Atkins & Co. in order to serve their growing trade in Canada to better advantage, has been called to a sphere of greater usefulness with his firm and made general superintendent of the immense factories at Indianapolis, Indiana. Mr. Hubbard was wonderfully successful in his work in Canada, but his superior qualifications in the practical end of the business of necessity resulted in his advancement. He began his new duties on January 1, being succeeded in Toronto by C. D. Ten Eyck, of Detroit, Mich., a gentleman of fine address and pleasing personality, who will undoubtedly meet with a cordial reception from the trade and continue the work so auspiciously begun.

CATALOGUES, BOOKLETS, ETC.

HARDWARE AND METAL would be pleased to review catalogues, booklets or other such publications issued by manufcturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. No charge will be made for these services.

SUTTON & SONS' SEEDS.

Sutton & Sons, Reading, Eng., have issued several publications which will be useful to hardware dealers in all parts of Canada. Seeds are recognized as a profitable line for hardwaremen, while Sutton & Sons are recognized as among the foremost seed dealers of the world. One of their publications is "Sutton's Farmers' Year Book and Graziers' Manual," in which is full information regarding the seed lines. Another is "Sutton's Amateur's Guide in Horticulture for 1904," containing information regarding vegetable and flower seeds and various supplies necessary for gardening. In addition to these books is a publication for the use of the trade containing terms and information for importers of seeds. Readers of "Hardware and Metal" desiring any or all of these booklets can secure same by mentioning this paper. They are well worth writing for.

MOFFAT STOVE CALENDARS.

The Moffat Stove Co., Weston, Ont., have this year a calendar which for real artistic merit would be hard to excel. On a stiff grey board background is a three-color engraving of a typical Scottish scene, an aged man and woman sitting by their fireside. The scene is entitled "John Anderson, My Jo," and below it is the much loved poem by Burns on that subject. The printing and the calendar pad are in colors which harmonize fully with the engraving. "Hardware and Metal" readers can secure this fine work on application.

DAN PATCH, 1.56¼.

A horse of good proportions is a thing of beauty, and has charms which attract general admiration. Dan Patch, the champion harness horse of the world, is well proportioned as well as speedy and is in consequence a great favorite. His owners, the International Stock Food Co., Minneapolis and Toronto, have had a half-sheet lithograph of this fine animal taken, which will be sent free to any reader of "Hardware and Meal" who makes application at once.

THE B. GREENING WIRE CO.

The B. Greening Wire Co., Hamilton, are again offering the trade a handsome calendar. The calendar pad is composed of large-sized letters which can readily be seen across a room. Above it are views of the company's works at Hamilton, also the founders of the company and the present president, S. O. Greening. Beneath the pad are several valuable tables of weights and measures of service to users of and dealers in metals.

A Question of Profit.

Profit in business lies in getting people to come back again, and again—and again to your store. There's no profit in the first sale.

The only way to get them to come back is to give them *something good*—something they will remember and talk about. The secret of success in business is *value*, and letting people know about it.

Value—high quality—is the foundation stone of the success of The Sherwin-Williams Paints and The Sherwin-Williams Varnishes. They have in them the quality that brings a customer back again, and again, and again.

And behind them, pushing them to the front—moving them from the dealer's shelves—is the strongest, most effective selling and advertising organization in the paint world.

You, if you are a Sherwin-Williams Paint Agent, are not doing justice to your business or to yourself if you are not handling the Full Line.

If you are an ordinary paint dealer, you will not know what paint success means until you learn what the Full Line means.

Write us today for full information.

LUCAS PAINT.

John Lucas & Co., New York, are also sending out a serviceable calendar, the dates on which can easily be read at a distance. The pads are printed in white on a green (Lucas green presumably) background. The scene depicted is Washington's headquarters, a fine type of colonial mansion. These calendars can be had on application.

SAWS.

It would be difficult to conceive of a more comprehensive range of saws than is described in a 200-page cloth-bound book issued by E. C. Atkins & Co., Indianapolis, Ind., and Toronto. Including in this range are circular and wabble saws, circular knives, corner box cutters, inserted tooth saws, band saws, gang and drag saws, pit saws, stave saws, ice saws cross-cut, with and without handle, wood saws, hand, panel and rip saws, carpenters', plumbers', butcher and hack saws, saw repairs, tools, etc., floor, bench and wall scrapers, corn and cane knives, vegetable slicers, plastering trowels, hammers, swages, shapers, gummers, grinders, files, brazing tables, clamps, saw filing and patching machines, guages, guards. The trade will readily recognize the importance of this publication. It is printed on excellent paper and is full of first-class illustrations, so it must have been issued at large expense. Copies of the work will, however, be sent free to readers of "Hardware and Metal" who request it in good time.

GURNEY'S DESK CALENDAR.

The Gurney Foundry Co., Toronto, etc., have issued a calendar which is quite distinct from anything else received by "Hardware and Metal" this week. It is a desk calendar, consisting of a pad enclosed in a board frame to stand on the desk. It is not too large for an ordinary desk, yet is so large that the dates can be readily distinguished. These are not for promiscuous distribution, so "Hardware and Metal" readers should use their own stationery when requesting one.

NEW BRITISH STANDARD OF WEIGHTS.

(From U. S. Consul Boyle, Liverpool, Eng.)

THE British Government has taken the first step toward the adoption of the decimal system of weights. It has just been announced by the Board of Trade that, under a special order in council, it will sanction the use of a weight of 50 pounds, instead of the present standards of 112 pounds (called a hundredweight) and 56 pounds (called a half hundredweight). The 50 pounds is by this action made a legal standard of weight. This reform has been adopted after forty years of agitation by Liverpool merchants and later on by petitions to the Government by the Chambers of Commerce throughout the country, and particularly by the Chamber of Commerce of this city. Liverpool has felt the necessity for the change more than any other city, as this is the leading entrepot for American and colonial produce of bulk, the weighing of which is a considerable item in the handling and, indeed, in the ultimate cost of the shipments. More cotton, corn, provisions, and tobacco are imported into Liverpool than into any other city in the world, and by far the largest proportion of these imports come from the United States; so the United States is peculiarly interested in the reform just instituted. The Liverpool Journal of Commerce comments approvingly as follows:

"All these great quantities are calculated by the American sellers in pounds avoirdupois, but by the British buyers they have had to be counted in hundredweights, quarters, and pounds, in accordance with our antiquated and absurd and anomalous system of weights. What is the consequence? To give a concrete example: The buyer wishes to ascertain, say, the weight of 100 pounds of tobacco; to do so the nearest weight he can employ is a quarter, or 56 pounds, to which must be added smaller weights until the exact quantity is ascertained. But two 50-pound weights will give him the exact amount at once; three will give him the weight of 150 pounds, four 200 pounds, and so on, smaller weights being used for fractions of 50 pounds. The consequence is an enormous simplification of calculation. It should be remembered that the men who weigh these materials at the docks are not, as a rule, mathematicians who can tell the time of day by algebra. They are largely day laborers, who have not had a superior education, and to weigh quantities with a set of weights necessitating the calculation of fractions of pounds, and thereby the use of dozens of small weights, necessitates a mental effort of which all are not capable, and the use of a multiplicity of weights which confuses them, leads to errors and loss of time—and time is money. But by the adoption of a 50-pound weight a unit of calculation has been obtained which will sweep away a whole set of weights, prevent errors, and save confusion, time and money. It should be remembered that the present complicated and wasteful method of calculating weights has to be gone through four times—first, when the goods are warehoused; second, by the customs, for the purpose of dutv; third, in the counting-house; and fourth, in the factory—and in all these cases the same cumbrous system of calculation by hundredweights, quarters, and pounds has to be gone through, and the loss of time, convenience, and money quadrupled. But by the adoption of a 50-pound weight, though four separate calculations will still be necessary, they can be done simply and quickly. The saving in bookkeeping will alone be great. The present system necessitates a maze of figures of different denominations; but by their reducton to the one common denominator of pounds weight whole columns of figures will be saved and the risk of mistakes minimized."

Americans have great difficulty in understanding the English system of weights—almost as much as they encounter in trying to understand the English fractional system of coinage. For instance, if you ask a man here how much he weighs he will tell you, say, "11 stone 7." A "stone" is 14 pounds; so 11 stone would be 154 pounds, and adding the extra 7 pounds the weight given would be 161 pounds. Even Englishmen "to the manner born" have to make a mental calculation in arriving at the result in pounds in such a case. Sometimes provisions and other articles are sold at so much a stone, and then if the quantity purchased weighs a few odd pounds over a stone or a number of stones the purchaser and seller have to figure out the price per pound. It is the hope and expectation that the results from the adoption of the new standard weight of 50 pounds will be so satisfactory that before long the old-fashioned "hundredweight" of 112 pounds will be entirely abolished along with the stone, and that a decimal fractional system of 5 pounds, 10 pounds, and 25 pounds will come into general use.

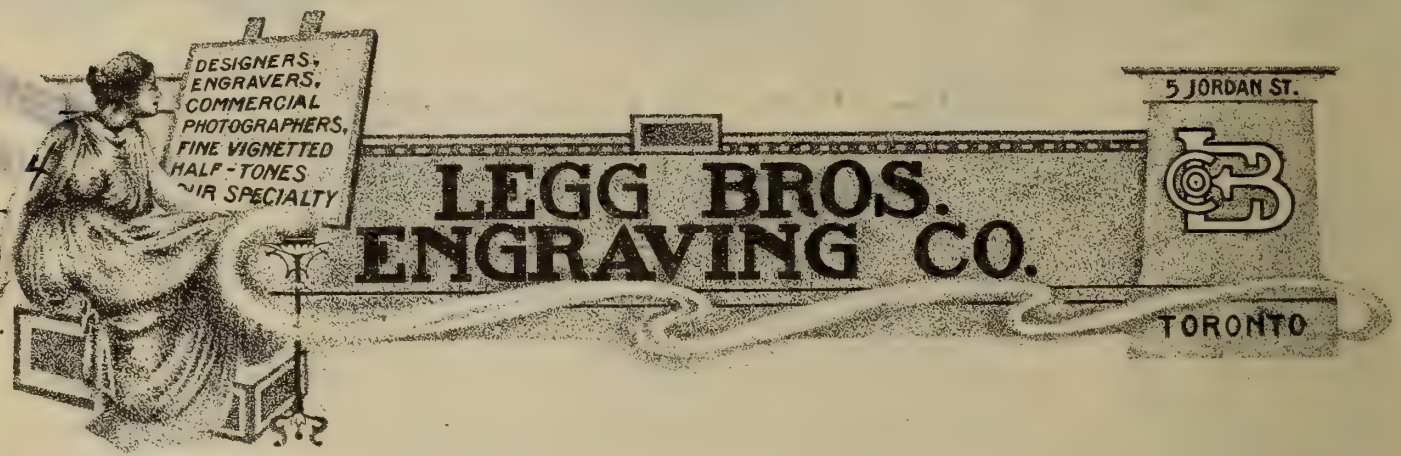
TORONTO HAMILTON MONTREAL



A TALE ABOUT SCALES

NEARLY A CENTURY AGO A GRIST MILL OWNER

A Fairbanks' Scale
"Serves You Right."

named Thaddeus Fairbanks, having considerable weighing to do in connection with his mill, and at that time having only the old style even balance for this purpose, conceived the idea of a platform scale, upon which the goods to be weighed could be conveniently placed or over which a load of grain could be weighed all at once. He put his ideas into execution which resulted in the building of the first platform scale. Knowing the value of this invention, this style of scale was at once patented and a factory was opened for the manufacture of this new discovery. Years have gone by since then and whenever inventive genius or skill can suggest any improvements these are at once embodied in Fairbanks' Standard Scales which are to-day universally recognized as the

THE DEVELOPMENT OF WATER POWER.

WITH the fast disappearance of Canadian primeval forests and the denuding of her coal measures, the question of economy in the use of fuel has assumed more and more importance, since, when the results of our extravagances are apparent all around us, we have begun to look at the future with some apprehension. However, perhaps this apprehension is not at all necessary. So far as our heat, light and power go there is little to be feared, since nature has provided three great forces, water falls, tides and winds, all of which present unlimited scope for investigation for the application of them to generate energy which may be transmitted and applied to produce light, heat and motive power.

Of the three, water falls present more desirable features than the other two, and for that reason are being developed to a much greater extent. Wind and tide are intermittent, but the stream or river keeps up its continual flow. Of course water as a motive power has long been used to serve man's purposes, and in Canada a large proportion of streams and rivers have been utilized as a motive power in their immediate vicinity.

With the advances in electric transmission of energy the field of usefulness of falling water has widened and widened.

Next to the muscular and animate forces of nature, water was the first to be utilized as a motive power, the reasons for which being that power development from it, requires no complicated machinery and that it has proved itself the cheapest and most direct source of energy to be commanded. Why then, if that is true, has improvement in the methods of development come so slowly? There are various reasons, the best of which is probably that before it was known that energy might be conveyed by the electric current, the field of its application was very limited Then the steam engine was invented which supplied the deficiencies of water power and overcame many of the difficulties experienced with the primitive water wheel, and so, as was quite natural, development took place along that line very much more rapidly than along the other. The requirements of marine navigation also helped on this development considerably.

However, the advent of electric transmission has removed the great drawback to water power and now development is rapidly taking place. The great example of this development in Canada is the "harnessing of the mighty Niagara." Had electricity and the numerous inventions for its application preceded the invention of the steam engine, what would the conditions have been to-day? That is a question easily put but hard to answer.

Thinking of the immense turbines which are to be installed in the wheel pits of the different power companies at the Falls, it would be of no little interest to follow the development in the methods of utilizing water power.

Naturally enough the first method to present itself was that of pure gravitation. This was compiled in the simple overshot water wheel, which received its water at the top of the fall and carried it down to the discharge level in what might be called buckets on its perichery they being somewhat similar to those used in the elevation of grain. This water wheel was slowly improved in several ways, such as providing an air vent to insure promptness of discharge and in the shaping of the buckets to insure the pressure being in the line of motion as much as possible. In Canada there are none of these primitive wheels now in operation, although it is not very long ago that they were to be seen occasionally.

The force of gravity was the principle of the second kind of water wheel to be investigated. An improvement was made in the application of the water in that it was received lower down and confined in a sluice around the buckets from the point of reception to the point of discharge. However, it was even more cumbrous than the first design, and therfore was short lived. The chief faults of these wheels were their size and the trouble occasioned in cold weather with the formation of ice upon them.

The next principle brought under consideration was that of impulse, or the direct application of an issue of water to the runner. This primitive impulse wheel had many good qualities, and it was used quite extensively in early American saw mills These were all at first constructed of wood, but this was not found to give very economic results, since they were easily racked and the wood gave little freedom for the proper lines and curves.

However, with modern reforms and materials they have been brought to a high state of efficiency. The impulse wheel has particular advantages under high heads of water, but they are not suitable for all purposes.

For this reason a change was made from the purely impulse wheel principle when in its early stages of development. This change was an additional principle rather than a departure from the impulse principle. The additional principle was that of reaction, which may be noted at any time in the rotating lawn sprinkler. The combination of these two principles is the foundation from which has developed the turbine water wheel. At first the experiment was tried of making a turbine on the principle of reaction alone, but, since there was no means of regulating the supply of power from a given wheel without destroying most of that in excess of the requirements, this form of turbine was soon thrown out of the field. However, the purely impulse principle has been applied to turbines and has proved a great success, being for some purposes far ahead of the turbine comprising both principles.

The Fourneyron turbine was perfected in 1834. It is an impulse wheel, but savors a little of the principle of reaction. It receives its water from the inside whence it is projected by means of stationary guides into the moving vanes or floats, at right angles to the guides at the point of issue. These mov-

ing vanes have their heel carried well around so as to remove the final momentum of the water as it leaves the outer rim. This wheel gave a high percentage of useful effect, but was rather cumbrous and very expensive, so that for general purposes it was not a success. However it embodied the proper principles of utilizing the water, and, for that reason, many attempts were made to simplify it.

This was done some 30 years afterwards, but in the process it was found necessary to alter the method of applying the water slightly. Instead of forcing the water to discharge into a contracted centre it is allowed to pass downward into an inclined heel bucket which spreads the discharge issue fully to the outside and which is curved and inclined in such a way as to arrest the highest possible percentage of the momentum of the water.

Ninety-five per cent. of the modern turbines are of this class. These turbines are suitable for falls of water as high as 60 feet, and that accounts for such a large per cent. of water wheels being of the modified Fourneyron turbine type. For falls over 60 feet in height and under three hundred the original Fourneyron turbine has not been excelled. Where the quantity of water in this second class of falls is limited and where the height exceeds the rough limit set, a third class of turbine has been designed. It is an impulse wheel, and receives its water from one or more nozzles around its periphery. It does not attempt to check the issue suddenly, but does so gradually by its well proportioned curves. Its useful effect is quite high.

The subject of the utilization of water for motive power purposes is a broad and interesting one, lending itself closely, as it does, to the economic running of machinery to carry on our present industries and to develope future ones. Now that power can be so effectively transmitted by the electric current there are great strides likely to be made along this line. A suitable foundation on which to build up such a statement is the fact of the construction of such large water power developing plants now being carried on at Niagara Falls.

Electric Smelting.

IN an address before the Ottawa Board of Trade, L. Simpson gave some information which, owing to the interest taken in the subject of electric smelting, is of peculiar interest. After referring to the presence of large areas of iron ore which because of the lack of coal for coking, are not being worked, he pointed out that nature had been lavish with water power in the district. This could be used for the development of electricity which might take the place of coke for smelting purposes. Mr. Simpson claimed that the quality of the iron and steel would be better if produced by the electric process of smelting than if the product of the coke smelters. He believed that there could be little doubt that the project was commercially possible and profitable. The appointment of a commission by the Dominion Government to investigate prevailing processes in the United State and Europe was a wise step. In dealing with the subject technically Mr. Simpson drew attention to an advantage in the higher purity of the resulting product. Another advantage claimed was that aluminum and other metals could be introduced in the smelting process at a great saving in cost.

A New Machine.

IN brush factories the usual way of mixing and combing bristles for brushes has been by hand labor, and it has always been a task of difficulty. According to the St. John (N.B.) Sun there has been invented a machine for this purpose. The paper says:

A bristle by itself is a very easy thing to handle, but taken in combination with some hundreds of others of the tribe it assumes a pig-headed obstinacy that leaves no doubt as to its parentage. To overcome this difficulty in handling bristles a machine, invented in Germany, reached this city a few days ago and is now in working order in the brush factory of T. S. Simms & Company, on Union street. So far this is the only machine in Canada that mixes and combs bristles without the use of hand labor, and its capacity is equal to the work of at least ten men. In the manufacture of brushes, bristles of various grades of quality and thickness are used, and it is the work of this machine to blend them together so that the various kinds of bristle may be evenly divided and distributed throughout the brush when made up. To effect this two bundles of bristles of different kinds are placed one after the other on an endless band and fed to the machine. They are kept in position by discs and "butters," these latter, as their name suggests, "butting" or patting the ends to keep them even. As the bristles pass along they are repeatedly combed by circular combs driven at a high rate of speed and by this means are spread out into thiner layers. An appliance with the back and forth motion of a shuttle receives them at a lower level on the machine and neatly drops them in a thin line on to another section of the endless band first mentioned, before this has time to pass from under the track of the shuttle it is back again and evenly distributes a further layer this time partly composed of bristles of the second grade and thickness. The two kinds will now pass through the machine again and be further combed and mixed and if necessary receive a third class of bristles. The process then continues until the blending is complete, which in reality is but a matter of minutes.

New Motor.

A DESPATCH from London, Eng., says that there are being published there particulars of a new motor invented by Peter Thornley, an engineer at Burton-on-Trent. Somewhat marvelous powers are claimed for this new motor. It is claimed that its development may result in the running of locomotives at twice their present speed, and with only half the cost.

The motor described is very compact, everything but the driving wheels being enclosed in a casing not much larger than that of a typewriter. The new motor is capable of developing 1,500 revolutions per minute and giving 15 horse-power under a boiler pressure of 200 pounds per square inch.

In the best railway locomotives the steam is admitted to the cylinder after the piston has moved back from five to eight inches. Thus a comparatively large vacuum is formed which has to be filled before any power is exerted by the steam upon the piston head. In his invention Thornley claims to have overcome this defect by a valve device which will admit a given quantity of steam at the commencement of every stroke, and this is so adjusted that the expansive force of the steam admitted is just sufficient to drive the piston to the end of the stroke. By this economy of steam he claims that a saving of fully 25 per cent. in coal can be made. The simplicity of the motor is such that the initial cost is below that of existing types. Compressed air can be used as well as steam.

Locomotive Trials.

THE Great Northwestern Railway Co., of England, have purchased a French locomotive of the famous De Glehn, four-cylinder compound type, and are going to test it in a series of trials with one of their own construction. The company say that they intend to adopt as their design for all future express engines the type that proves most successful.

The French engine is a ten-wheeler, consisting of a four-wheel bogie, four coupled driving wheels and a pair of trailing wheels under the fire box. It has the advantage of being workable as a four cylinder simple engine should circumstances render such an operation desirable. This feature is supposed to be the secret of the success of the Glehn type of locomotive.

The British locomotive belongs to the type of engine which achieved the world's record long distance run to Plymouth with the royal special last July.

Increased Use of Electric Energy.

Reports of the officers carrying out the Electric Light Inspection Act at Ottawa show that the use of the electric light has increased greatly in Canada during the past year. This increase is represented by 236,865 incandescent lights, or their equivalent in arc lights, which represents a 21 per cent. increase over the year before, of the provinces Ontario, is by far the greatest user, it having 203 out of the 324 electric plants in use in the Dominion. However, British Columbia shows the largest proportionate increase, it being 82 per cent.

The largest single plant in the Dominion is that of the Toronto Electric Light Co., with its 170,000 lamps. The next largest is that of the Lachine Rapids Hydraulic Co., with 158,503 lights, and the third is the Ottawa Electric Co., with 111,927 lights.

The Machinery Markets.

TORONTO.

GENERAL machinery market conditions are very bright this week. The reason for this brightness is the realization of the expectations of some weeks back as to what the market condition would be about the middle or towards the close of the month of January. The market reports in "Hardware and Metal" for several issues back have shown that the actual amount of business done was not great, but that there were numerous inquiries received. The number of these inquiries was large, even surprisingly so, and on this and other indications, it was generally thought that the prospects for a good opening up of trade some time during January were very bright. These suppositions have proven correct. Towards the end of last week trade began to pick up in almost all lines, and there was a special run on sawmill machinery, general wood-working machinery, and in engines and boilers. During this week the demand for these lines of machinery has continued to be good, and there has also been considerable business done in most of the other lines of machinery. The inquiries which came in during the earlier part of the month are now bearing fruit, and are resulting in substantial orders. From some sources there is reported a special demand for iron-working machinery this week, especially machine shop tools. However, this is not a general feature of the market. There is one feature of the market which is not what was somewhat generally expected, and that is the small amount of business done in the line of electrical machinery. It is reported that the situation has not been much brighter, if any, during this week, than it was during last. Neither the number of inquiries for dynamos, motors and generators large by any means, and, consequently, the outlook for this line of machinery is not what machinery dealers would like. One reason given for this is that so many orders were placed during the early part of December, that it is not to be expected that there should be a good demand for that class of machinery at the present time. Some of the manufacturers of electrical machinery say that the market is as it has always been in former years, and that, consequently, the relative dulness is not to be wondered at. Machinery dealers are almost unanimous in saying that this week has witnessed a promising opening up of the machinery trade for the coming year.

The H. W. Petrie Machinery Co. report a good demand for iron-working machinery this week. They have just received the contract for the complete equipment of the automobile factory of The Redpath Motor Vehicle Co. of Berlin, Berlin, Ont. They are also supplying W. J. Thorn, manufacturer of fine tools and machinery, London, Ont., with an outfit of Cincinnatti machine tools. Whalen & Bowman, of Port Arthur, are also getting an outfit of machine-shop tools from them. They report a continuation of the good demand for wood-working machinery and for boilers and engines. They are preparing to ship a sawmill outfit to Barrett Bros., Ottawa; and they have also on hand the contract for the installation of motive machinery, including a large Wheelock engine and boiler, with the necessary shafting and belting. This company say that the demand for miscellaneous machinery has been steady during this week, and that the numerous inquiries received during the last three weeks are resulting in a good many orders. They think that the prospects for the coming season are very bright indeed.

The A. R. Williams Machinery Co. report that the run an wood-working machinery, including sawmill, shingle-mill and planing mill outfits, has continued during this week. The demand for engines and boilers has also been very good, as it was last week. However, the amount of business done in other lines of machinery has not been noticeably increased since the latter part of last week. This firm have just added two travellers to their travelling staff.

The Levy, Weston & McLean Machinery Co. say that they have found the demand for sawmill machinery, planing mill machinery and other wood-working machinery very good this week, as it was last. Engines and boilers also continue to occupy considerable attention by buyers. As to other lines of machinery, they say the demand is fairly good, and that the demand for iron-working machinery, principally machine tools, is beginning to assume the proportions expected of it. They think that there is every reason to consider this a prosperous opening up in the machinery trade.

The Jones & Moore Electric Co. have nothing very bright to say of the market for electrical machinery. The number of orders placed have been very few, if any, more than last week, and the number of inquiries are not promising for a brightening of the market in the near future. "Of course," said Mr. Jones, "our factory is running to its full capacity, but the work being done is principally on orders placed before Christmas. Perhaps that is one of the reasons we are not booking many orders at present. If the factory were ready for more work, and we put forth our best efforts in all probability we would get more orders than we are. However, as it is, we are catching up on booked orders, and are content for the present to let things go on as they are."

William R. Perrin & Co., manufacturers of hydraulic presses, power presses, filter presses, etc., report that the demand for their lines of machinery at the present time is very good. This company have just been granted a charter by the Ontario Government incorporating them under the name of Wil-

MONTREAL.

On the whole, there seems to be a better feeling this week among the machinery houses, most of which report some improvement in this week's business compared with last. This improvement is manifesting itself more perhaps in the increased number of inquiries received this week, but there is also some improvement in actual business done. Some large orders are soon to be placed for machine tools and for heavy engines and boilers. A number of firms are competing for these orders, and it is thought they are likely to go to Canadian firms.

As noted last week, however, there is a disposition on the part of some buyers to hold off in the hope that a slump in values in the American metal and machinery markets may force Canadian makers to reduce their prices. American machinery houses are, without doubt, hustling for business in Canada, but there have been altogether too much cry of "wolf" on the part of a few men who have been afraid of a consequent slaughtering of prices. Inquiries made by "Hardware and Metal" this week failed to show that any very startling price concessions are being offered by the representatives of American machinery houses. The only effect which the presence in Canada of an unusual number of these gentlemen has had so far has been to create an unsettled feeling among buyers, who hope that from the competition of a large number of sellers, lower prices may result. A local machinery agent in discussing the situation this week with "Hardware and Metal," said that Canadian manufacturers are quite as independent as they were a year ago, and he argues from their independent attitude towards agent and buyer that they have plenty of work on hand and are confident as to the future.

The sawmills up the Ottawa have resumed their operations, and from them has come during the week orders for machinery supplies, which have helped to stimulate business. One or two sales of complete sawmill outfits have been made quite recently.

Another feature of the week has been an increased inquiry for gas and gasolene engines.

The Laurie Engine Co. report a slight falling off this week in the number of inquiries received for large engines and boilers, but, as they have sufficient work on hand to keep them busily employed until the middle of the Summer, they see nothing in the situation to excite alarm. Inquiries for iron and woodworking machinery have been coming in freely during the week, and a few good orders have been booked. At Thetford Mines The Laurie Engine Co. have installed quite recently some mining machinery of their own manufacture. A complete sawmill outfit, including engine and boiler, for a Quebec town, is among the week's sales. Trade seems to be opening up nicely this week, the volume of business being considerably in excess of that of last week.

The Fairbanks Co. report actual business this week comparatively quiet, but the number of inquiries received is an encouraging sign, which points to good business later on. They are paying particular attention at present to pushing the sales of a line of gas and gasolene engines and they report that the number of inquiries received for their engines during the last week has been an encouraging feature.

E. Leonard & Sons report encouraging prospects this week, not only in engines and boilers, but also in mining machinery.

Mr. Alfred Rubra, of the Machinery Exchange, reports a slight increase in this week's business compared with last. Buyers are making inquiries, and, although there is a disposition in some quarters to hold off, in the hope of lower prices, Mr. Rubra thinks that prospects for this season are quite favorable. Business is quite up to the usual standard for this time of year.

Fred Thompson & Co. have more work on hand in the manufacture of dynamos, motors, and specialties of various kinds, than they can attend to.

Williams and Wilson report an improvement as compared with last week's business. Actual business this week shows a considerable increase, and the increased number of inquiries coming in point to a good season.

W. H. Nolan, of the Canadian Machinery Agency, is well satisfied with the way business is opening out this year. This week's trade shows some improvement over last.

NEW YORK.

The Iron Age says of the New York market :

Evidences of a better tone are to be noted in all branches of the machinery trade. In some lines this has crystalized into orders, but, considering the trade collectively, it is chiefly due to marked increase in inquiry. An officer of one of the very large machine tool houses, in speaking of the improvement in inquiries both as to number and tone, referred to several which commenced something like this : "We are now in a position to take up the matter of equipment which we had under advisement last Spring." Indications of this sort are, of course, of the best, and from present appearances a good many latent propositions will soon be stirred into renewed activity. No exceptionally large orders were reported during the week.

Machinery and Electrical Notes.

The large new boiler for the New Brunswick Foundry, Fredericton, is now being installed.

The Grand Trunk Railway Company have ordered 15,000 tons of best English rails at $23.50 per ton.

The C. P. R. will extend their Gatineau branch sufficiently far north to connect with the Grand Trunk Pacific.

Several lumber camps in central Ontario have been compelled to desist lumbering operations owing to the depth of snow.

An attempt will be made to have the White Bear mine, Rossland district, B.C., concentrator ready for operation by June 1.

The new boiler for the Bennett Manufacturing Co., Pickering, Ont., has been installed, and factory operations will be started at once.

The new machine shop of the Page-Hersey Iron and Tube Mills, which was completed some two months ago is reported to be giving great satisfaction.

Mackenzie & Mann, Toronto, have made the statement that they have placed orders for 25,000 tons of standard steel rails at $26 f.o.b. Port Arthur, for use on the C.N.R.

E. J. H. Pauley, president of the Dominion Linen Mills Co., Orillia, Ont., is in Great Britain purchasing machinery for the new mills to be erected in that town this Spring.

The C. P. R. have experts examining the Port Arthur, Ont., elevators, with a view of installing electricity as a motive power. The cost of installing electricity would be about $500,000.

Canadian carriage-makers were in Ottawa last week seeing the Government with a view of getting additional protection. There is now a duty of 35 per cent., but there is a class of cheap carriages coming from the United States against which the Canadian manufacturers are asking now to be protected.

The Blackstock Mining Syndicate, Toronto, have about ready for operation a plant on the Columbia River, B.C., 350x120 feet, three stories high, equipped with improved machinery for concentrating and cyaniding. The mills are intended for the treatment of low grade ores of the Centre Star and War Eagle mines. The output of the mill will be 400 tons a day, and the average value of each ton is placed at $10, which will mean a turnover running up into big figures.

M. L. Lewis, a street railway promoter, of Boston, U.S.A., was in Toronto recently and he is credited with the statement that electric railway lines may now be constructed and equipped so much cheaper than steam roads that they are certain to become serious rivals in the next few years. He says that sleeping cars are being operated in connection with electric lines of railway in several parts of the States, where special passenger and freight trains are operated for the benefit of the rural traffic.

A DOMINION EXHIBITION AT WINNIPEG.

BUSINESS men in Winnipeg and the West express great satisfaction with the decision of the Dominion Government to make a grant of $50,000 towards holding a Dominion Exhibition in Winnipeg in July. It is probable that this action will be followed by similar grants from the city and the Provincial Government.

This grant comes at an opportune time. On the American side every effort is being strained to prevent emigration to Canada and our American cousins are by no means scrupulous in their methods, so that stories injurious to the Canadian West, and which are absolutely without foundation are being printed in circular form and distributed by the thousand. So strong has the opposition become that bankers have formed a league not to loan money for investment in the Canadian West. The Winnipeg Real Estate Exchange is taking this matter up and sending a strong delegation to a convention of American real estate men interested in Canadian lands which is to be held in Minneapolis in January. But this Dominion Exhibition will do more than any other one thing to stem the tide of opposition. The people will come and see for themselves what the country is like and what it can produce.

LARGER POWERS OF SELF-GOVERNMENT.

A GREAT deal of needless capital is being made in both Canada and Great Britain out of the remarks of Sir Wilfrid Laurier as to the necessity of Canada being given larger powers in regard to treaty making and questions arising over international territorial disputes.

In Great Britain, particularly, there appears to be people who see in the proposal the entering in of the thin edge of the wedge of political independence. It means nothing of the kind. What is really meant is larger powers of responsible government, which is dear to the heart of every Canadian.

The principle is not new in Canadian politics. It was enunciated many years ago by Mr. Edward Blake. And if it was felt to be a necessity then, it is a great deal more so now.

We are simply wanting the power to manage our own affairs and any one who is at all conversant with Canadian history, knows that the greater the latitude Canada has been given in matters of self-government, the stronger have become the ties of consanguinity between this country and the Motherland. There are still a few statesmen in Great Britain who regret that Canada was allowed in 1846 to regulate her own Customs tariff, but had she not been so allowed, it is scarcely probable that Canada to-day would have been a part of the British Empire.

The securing of the power outlined by Sir Wilfrid Laurier will be another step in the direction of completion in the matter of self-government, and like all previous steps in that direction, mean the cementing, not the dismemberment, of the Empire.

The trend of things is already in that direction. At one time Canada had practically no voice in international affairs affecting her welfare. The injustice has, however, been disappearing by easy stages, until in the last international tribunal to settle the Alaskan boundary question, two out of three jurists representing the Canadian or British side, were the appointees of our own Government. The rights granted toCanada in 1878 to decide whether or not she should be included in any treaty made by Great Britain with a foreign power, was also a step in the direction towards that more complete system of responsible government which Sir Wilfrid Laurier, and, we believe, the majority of the people of this country, are seeking.

By granting the larger powers outlined by the Premier, the source of the only serious grievance Canada has had against the Imperial authorities during the last half century will have been removed. It, therefore, follows that in the interests of the unity of the Empire, these powers should be conceded.

It is only a question of time before the right to manage our own affairs in regard to treaty making and territorial boundary questions must be granted, and Canada should now be sufficiently in the confidence of the British Government to have this right unhesitatingly accorded her.

VISIT THE TRADE CENTRES.

THE merchant whose ambition is higher than the mere making of a fortune selling hardware, finds frequent visits to urban communities of far greater value to him in the building up of his business, than any amount of shrewdness in buying. He finds at least two trips a year, no matter at what distance he may reside, a necessity both to good buying and good selling.

Every visit to the city serves to bring him closer in touch with existing conditions in all ines of goods. A valuable knowledge can be obtained in this way of new goods for specialties, novel ideas for window and interior decoration and the like. He will also have the opportunity of making the personal acquaintance of the wholesaler with whom he deals, while at the same time, if he keeps

his eyes open, he may gather a general fund of information that will be of considerable interest to his customers. Bargains can be always picked up on these trips that will perhaps pay the expence incurred.

The merchant who thinks to save money by remaining at home, or considers himself too busy to leave, or is disinclined from any other cause, is not in a position to successfully compete with his rival who regularly visits the commercial centres.

THE LACK OF TASTE.

WHEN a merchant displays little interest in his window, he often hides behind the fact that he has no taste for window dressing, that is, that he has none of the artistic qualifications that show themselves in first-class windows. As is the case in most of the causes to which the unprogressive merchant assigns his unattractive windows, it is a characteristic which he does not endeavor to overcome. He really thinks it is so, and blames this rather than lack of effort on his part.

It may be true enough in some cases that a merchant doing his very best would make his windows look like a store-room, or would be utterly unable to acquire the desired effect. Such a man is, however, deprived of all excuse by the fact that his clerk, or one of them is not likely to be as inartistic as he is. If so, it simply shows that a new clerk is required.

Neatness is essential to the effective display, and a window in which it is a prominent feature is sure to have its attractions, although perhaps not so well arranged as if by an experienced window dresser. With time too, he will improve his eye for beauty and the ease with which he will think of designs. Ambition and practice is all that is necessary to make a fair window dresser out of any man.

LOOKING FOR AGENCIES.

A British Columbia hardware firm who are giving up their retail business to devote themselves entirely to the wholesale trade and to various agencies in British Columbia would like to correspond with any readers of this paper desiring to secure such agents. Address enquiries re same to The Editor, "Hardware and Metal," Toronto.

SPECIAL LINES FOR THE HARDWARE STORE.

LAST week the suggestion was made that of the many lines which could be added to the hardware merchant's stock-in-trade stock food should receive consideration. The value of this line has been demonstrated to several dealers, some of whom write that they not only carry the line but are paying particular attention to it at the moment, as February is one of the busiest months of the year in this line.

Another line which is winning increasing attention from hardware men is seeds, particularly garden seeds, though grass seeds are a paying line with many. This line is also carried by flour and feed dealers as well as by some druggists and general merchants. Inasmuch, however, as the buyers of seeds nearly always want garden tools, etc., at the time they want seeds, hardware men have found the line one that yields good returns. There is a good turnover, considering the capital, attention and store space devoted to it, and the margin of profits is large.

Stock foods and seeds could be carried together, each would help to increase the sales of the other.

Another line which is always worthy of attention in early Spring is sporting goods. At present there is a fair demand for hockey and skating supplies but in a few weeks this will be over and attention will be turned to golf, baseball, lacrosse, boating, croquet, etc. Supplies for these sports as well as such lines as hammocks, fishing tackle, etc., should be kept in attractive variety in the hardware store and should be pushed with such vigor and persistence that local buyers will feel the uselessness of sending to the Toronto or Montreal catalogue houses for such goods.

It is true that some of these lines are carried by stationers in many towns. Yet it is generally admitted that the hardware store is the proper place for them and the hardware man can get the trade if he gets after it.

In this connection it is well that bicycles should receive attention before the snow melts. Bicycles have been a profitable line and later an unsatisfactory line. Of late years, however, they have won much more approval than during recent years. They are now built more substantially, so do not call for so many repairs; the parts are now uniform and there is little difficulty in making repairs. Moreover the bicycle has come back to favor to some degree in recent years and bids fair to be even more popular in the years to come. It should receive consideration at this season of the year.

The above are but a few of the lines which are worthy of especial attention at this season. The more of such lines that a hardware dealer can introduce into his business the better.

AN INVOCATION.

The day returns and brings us the petty round of irritating concerns and duties. Help us to play the man; help us to perform them with laughter and kind faces. Let cheerfulness abound with industry. Give us to go blithely on our business all this day; bring us to our resting beds weary and content and undishonored, and grant us in the end the gift of sleep.

—Robert Louis Stevenson.

TIME FOR A CLEANING UP.

IT is not necessary to wait till the Spring time for giving the store a good overhauling. Stocktaking always brings to the front a quantity of goods which somehow got away back in the shelves and are now not as saleable as they would have been six months ago. It also changes the appearance of the store more or less. In fact there is no better season of the year than now to take the spare time of a week or so to so rearrange the stock as to give it the brightest, most attractive appearance possible. Then follow up this rearrangement by introducing the scrubbing brush to the floor and the dust cloth and even the paint brush to the counters, shelves, scales, show cases, etc

A PREMIUM ON BRAINS.

PHYSICAL power, mental activity and moral force all contribute to the largest success in an undertaking. The man who lacks any of these is handicapped in the keen competition of business life. Yet as civiliization becomes more intricate the dominance of the physical by the mental becomes the more striking, the more obvious.

Moral force is the power possessed by practically all leaders of men, by nearly all successful business men. They learn to use to best advantage the brains or mental activities as well as the bodies or physical force of the employes.

How to make the business use of the mental acuteness of a large staff of employes is a problem in itself. Yet this problem is being solved in an admirable way by many of our leading business men.

An instance of this has just come before the notice of "Hardware and Metal" in the shape of a notice put up throughout the works of the Taylor-Forbes Co., Guelph, Ont., for the benefit of their employes. It was as follows:

$250.00 — Prizes for Suggestions.

$250.00 in cash prizes will be awarded to employees submitting the best suggestions within the period beginning January 4th and ending June 30th, 1904, the amounts to be divided as follows: 1st prize, $50; 2nd prize, $35; 3rd prize, $25; 4th prize, $20; 6 prizes each $10; 12 prizes each $5.

The number of prizes offered makes it possible to reward some minor suggestions while recognizing the efforts which assist in more important matters.

Suggestions ought to be made by every employee even though they may seem of small importance, as each idea given may lead to a better one. In determining the relative order of the prizes the number of suggestions made by an employee, as well as their importance, will count.

For these prizes all factory and office employees (excepting heads of departments) are entitled to compete.

Suggestions may relate to improvement in manufacture of any article, reduction of labor, machinery, tools, systems now employed, increase of trade, and to the general management of the business. The company reserves the right to keep any suggestions private.

All suggestions must be made in writing and the employee's name signed thereto with date, and may be sent by post or deposited in the box at entrance hall provided for that purpose.

The judges will be composed of the directors and a committee from amongst the heads of departments.

We earnestly solicit the co-operation of all employees.

Guelph, Ont., January 4th, 1904. TAYLOR-FORBES CO., Limited

"Responsibilities go to the one who can shoulder them, and power flows to the man who knows how."

It is by such co-operation that a modern business institution can hope to dedelop the warmest relations between master and man and to realize the greatest degree of success and prosperity.

MR. W. J. MUIR.

HARDWARE AND METAL takes pleasure this week in presenting to its readers the portrait of W. J. Muir, the eastern sales agent of The Canadian Cordage and Manufacturing Co. of Peterborough, Ontario. Mr. Muir is a young man who is deservedly popular with all classes of Montrealers, and by his candid and straightforward dealings with the trade he has won their confidence to a gratifying extent, as is being manifested by the steady increase in the volume of his business. A man of unfailing courtesy, always considerate of the feelings of others, Mr. Muir is also energetic and determined and possessed of a commendable independence of spirit. He is a business man of the right stamp.

Mr. W. J. Muir.

Mr. Muir has been connected with the cordage business for about eight years, serving in that time in various departments, including the manufacturing. He possesses, therefore, a thorough practical knowledge of the business, and, in consequence, much weight is attached by the trade to his opinions on all matters pertaining to cordage. Mr. Muir takes a keen interest in the growth of the cordage business in Canada. Born in Montreal, he is a patriotic Canadian, and is justly proud of the fact that the cordage manufacturers of Canada, so far as make and quality are concerned, are not surpassed by any country in the world. And he smilingly observes that "Judging from the foreign goods which we sometimes see here, Canadian manufacturers are not equalled by many." His own company's mill at Peterborough in point of improved machinery is one of the best on the continent, and Mr. Muir has the satisfaction of representing a thoroughly progressive Canadian firm.

Mr. Muir's popularity extends to almost all parts of Canada, and in business and social circles to no one is extended a more cordial welcome than to "Billy" Muir.

INQUIRIES FOR CANADIAN TRADE.

The following are among the inquiries as to Canadian trade received recently at the Canadian Branch of the Imperial Institute, London, Eng.

1. A firm manufacturing patent paper bags of various kinds desires to be placed in communication with a first-class Canadian importing house prepared to handle the goods.

2. A London firm asks for addresses of Canadian shippers of black currant and other fruit pulp

3. A firm handling large quantities of wood acetic lime invite correspondence from Canadian producers of same.

[The names of those making inquiries may be obtained from the Editor of THE CANADIAN GROCER.]

METAL AND HARDWARE DINNER.

THE Montreal Metal and Hardware Association of the Board of Trade held their third annual dinner at the Montreal Club on Wednesday evening, January 20th. Although small, the dinner was a thoroughly enjoyable affair and a very jolly evening was spent, short speeches, recitations, and songs keeping those present entertained until quite a late hour.

In the absence through illness of the president, Mr. George Caverhill, the vice-president, Mr. G. A. Kohl, took the chair, the vice-chairs being occupied by Mr. George E. Drummond, president-elect of the Board of Trade, and Mr. William McMaster.

The following is a list of the subscribers and guests: Messrs. Fred Bacon, James Crathern, Geo. Caverhill, A. H. Campbell, James Davidson, Geo. E. Drummond, Thos. J. Drummond, H. J. Fuller, Geo. A. Kohl, J. B. Learmont, W. S. Leslie, William McMaster, Arthur McMaster, J. T. McCall, T. H. Newman, Thos. L. Paton, J. W. Pyke, Robert Starke, J. T. Knight, Colonel J. B. MacLean.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, January 22nd, 1904.

Hardware.

BUSINESS in wholesale circles this week shows a very considerable improvement over last, and the opinion is freely expressed that trade has at last emerged from the stagnation of the holiday season. It is expected that the activity of this week will continue as the Spring trade is now commencing. Orders this week for immediate delivery are considerably in excess of last week. Of course these are sorting orders only. However, the travellers are sending in good orders for Spring delivery. These are coming in from all parts of the country and prospects are considered very bright for an unusually bright Spring trade. Payments are variously reported. One or two firms complain that retailers have been slow in meeting their obligations, but nearly all agree that the last month has seen an improvement in this respect. There are a number of price changes this week, but none are of very much importance. Grind stone fixtures are a little lower, about 5 per cent. Cotton goods are firm at a slight advance, which will be noted below. Hand saw handles and plane handles have advanced about 10 per cent. All wooden goods are firm and in some instances big advances have been made. Wooden bowls. for example, have been advanced from 25 per cent. to 50 per cent. and wooden grain measures have been advanced 10 per cent. Prices on these goods are "open" but these figures about represent the general trend of prices.

Spring Hinges—Wholesale houses inform us that good orders are now coming in for forward delivery. A good Spring and Summer trade seems assured. We quote: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Rubber Hose—For forward delivery some good orders have been booked this week and the number of inquiries received points to a brisk trade later on. Our information is that the cheap rubber hose (2-ply) in 1-2-inch and 3-4-inch sizes will not be made this season by the Canadian manufacturers. Any orders for same will have to be filled out of stock on hand, but it will be scarce and difficult to obtain. The list price is as follows:

	2-ply. per foot.	3-ply. per foot.	4-ply per foot
1-2-inch .. ..20c.		25c.	30c.
3-4-inch .. ..25c.		30c.	37c.
1-inch.. .. ..33c.		40c.	50c.

The discounts from above list are as follows Trade, 75 per cent.; Western, 65 and 10 per cent.; white, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; Cotton, 60 per cent.

Game Traps—An occasional order for game traps has been recived this week. The discount on "Victor" is now 72 1-2 per cent. and on "Hawley and Norton" 60 and 2 1-2 per cent.

Poultry Netting—The Spring trade is commencing now. A few orders were received during the week. The discounts for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Wooden Goods—As noted above, the market for all wooden goods is very firm and advances have been general. Prices for wooden bowls and good grain measures are "open" but on the former there have been advances of from 25 to 50 per cent. and on the latter about 10 per cent.

Wire Nails—The manufacturers report prospects bright for an excellent trade in 1904. Business just now is confined to a few sorting orders, but the indications are that with the opening of navigation there will be a repetition of the exceptionally busy season of 1903. All the local mills will soon be running full time. We quote as follows: $2.40 per keg in carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

Cut Nails—As was noted last week a reduction of 15 cents per keg has been made in prices previously quoted. Trade is now very quiet. The price is now $2.30 per keg f.o.b. Montreal.

Fence Staples—A few orders are now being booked for forward delivery. It is expected that the bulk of the trade in fence staples during 1904 will be with Manitoba and the Northwest Territories. We quote: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c. extra.

Pressed Spikes—The discount is 25 per cent.

Horsenails—There is very little activity at present. Prices are unchanged and we again quote the following discounts: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—There is nothing of interest to note this week. Trade is quiet. We again quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.ob. Montreal only.

Sleighbells—The season is now almost over and prices quoted are probably subject to some concessions in order to clear out stock. Nominally prices remain as follows: Back straps, 30c. to $2 each; body straps, 70c. to $2.50 each; shaft gongs, 2 bells, 20c.; 3 bells, 35 to 60c.; 4 bells, 55c. to $3 each; brass-team bells, No. 1, $1.90 per dozen; No. 2, $2.40 per dozen; No. 3, $2.70 per dozen; No. 4, $3.70 per dozen; No. 5, $4.65 per dozen; York eye bells, No. 10, $1.35 per dozen; No. 12, $1.65; No. 14, $1.90; saddle gongs, $1.10 to $3 each.

Skates—Trade is now almost over for this season and stocks are reported as well cleared out. Nominally there has been no change in price, but doubtless some concessions are obtainable as wholesale houses are anxious to clear out their stocks. The prices this season have been as follows: Halifax pattern, 37c. per pair; nickel-plated, 65c.; ladies' nickel-plated, 55c. to $1.25; ladies' concave nickel-plated, $1.45; plain hockey, 27c to $1.35; nickel-plated hockey, 60c. to $2.50; double end hockey, $1.65 to $3. Skate straps, 70c. to $1.35.

Hockey Sticks—The same remarks apply to hockey sticks which are now be-

ing offered at reduced prices in order to clear. The season has been a good one and stocks left in the hands of the jobbers are not very large. Prices this Winter have been as follows: Best second-growth goalkeeper's, $3.80 per dozen; ash, $2.70; elm, $2.18; boys' elm, $1.10. Regulation pucks, $1.50 per dozen; boys', $1.15 per dozen.

Fire Shovels—Still in seasonable demand. We quote: No. 70, 39c. per dozen; No. 55, 55 to 82c. per dozen; No. 57, 82c. to $1.10 per dozen; No. 60, 70 to 88c. per dozen; No. 65, $1.10 to $1.23 per dozen; Duplex, No. 7, 96c. per doz.; No. 9, $1.20 per dozen; No. 11, $1.54 per dozen.

Snow Shovels—In seasonable request at unchanged prices. We quote the following prices: "Habitant," $2.50 to $2.75 per dozen; "Victor," 30 per cent. off; steel railroad shovels, 45 per cent. off.

Screen Wire Cloth—Wholesalers report that some good orders have already been booked for Spring delivery. The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—General business in wire has been brisker this week. A considerable improvement has been noticed in the demand for galvanized coil spring wire. We quote the following prices: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No. 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Car lots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in car lots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—Business has been much brisker since prices for 1904 were arranged, two or three weeks ago. Orders for forward delivery are coming in satisfactorily and trade prospects are generally reported bright. We quote as follows: No. 5, $3.65; Nos. 6, 7, and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12. $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. extra per 100 lbs. will be charged.

Barb Wire—Trade in barb wire has also improved since the settling of prices. Some good business is reported this week. We quote as follows: $2.75 per 100 lbs. f.ob. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—Trade shows some improvement this week. Prices are unchanged and we again quote as follows: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.: spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.; hay-baling wire, 20 to 25c.

Fine Steel Wire—Trade is quiet at present. The discount continues 25 per cent. with net extras as follows: 1 and 2-lb. hanks, 25c. per 100 lb.; 1-2-lb. hanks, 37 1-2c., and 1-4-lb. hanks, 50c.

Brass Wire—Business is fair at unchanged discount, viz., 60 per cent.

Copper Wire—Business fair: discount 60 per cent.

Rivets and Burrs—Trade is quiet this week so far as immediate shipments are concerned, buf a few orders have been booked for forward delivery. Discounts remain unchanged as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—Canadian manufacturers now have the home market to themselves as the Americans have been driven out by the increased discounts. Trade is fair at present and prospects are particularly bright. We quote: Carriage bolts, common ($1.00) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1.00) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1.00) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3.00) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes, 4c. per lb. off; nuts, hexagon, all sizes, 4 1-4c. per lb. off.

Washers, 45 per cent. off.

Screws—A good sorting trade has been transacted this week. Discounts are as fololws: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—Trade is dull and there is nothing to note. We again quote: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

Lanterns—We quote as follows: Lift, hinged or tilt, $4 to $4.25 per doz.; cold blast No. 2, $7 to $7.50; painted dashboard, $6.50 to $6.75; plain dashboard, $6 to $6.25; searchlight, $20 to $24 doz.; brass cold blast, small, $9.75 to $10.

Cordage—Interest still centres in cotton goods which continue firm at a further advance. Sash cord has been advanced 1 cent and cotton twine has also advanced. Prices of rope are very firm in sympathy with the continued strength of the market for raw materials. We quote the following prices: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11c.; single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 22 to 27c.; cotton twine, 22 to 24c. for 3 and 4 ply. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 30c.; cotton candle wick, 21c.

Building Paper—Actual business is still on the quiet side, but prospects seem bright for a brisk trade later on. We quote the following prices: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll: dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

Cement—Trade is still very dull and there are no features of interest to note. We quote as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—Trade continues very disappointing. Prices are unchanged, English being quoted at $16 to $22 per 1,000, and Scotch at $17 to $22.

PLUMBING GOODS.

Trade in plumbing goods shows some improvement this week as compared with last. The supply houses report an

increased demand for almost all lines of plumbing supplies. The continued cold weather has caused the bursting of many pipes and hence the demand from the plumbers for iron pipe has continued particularly brisk.

Lead Pipe—Trade continues quiet up to the average for this time of year. Prices are firm and unchanged. Composition and waste are selling at 8c. and ordinary at 7c. The discount is 35 per cent.

Iron Pipe—Trade has been particularly brisk this week for reasons noted above. Prices are easy, the prices quoted below being subject to a discount of about 10 per cent. in most cases, and for large orders as much as 12 1-2 per cent. discount is said to be obtainable. Subject to these remarks, we again quote as follows: Standard pipe, per 100 feet, in lengths under 19 feet—black, 1-8-in., $2.30; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55. Galvanized—1-4-in., $3.20; 3-8-in., $3.45; 1-2-in., $3.90; 3-4-in., $5; 1-in., $7.20; 1 1-4-in., $10.05; 1 1-2-in., $12.20; 2-in., $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in., $4.20; 3-4-in., $5.25; 1-in., $7.55; 1 1-4-in., $10.55; 1 1-2-in., $12.75; 2-in., $17.60. Galvanized—1-2 in., $5.20; 3-4-in., $6.65; 1-in., $9.55; 1 1-4-in., $13.25; 1 1-2-in., $16; 2-in., $21.

Soil Pipe and Fittings—In steady request at the following unchanged discounts from the list prices: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—The market for solder continues very firm in sympathy with the strong tin market. We quote: Wire solder, 18c.; bar, 17 1-2c.

METALS.

General business in heavy metals shows some improvement this week and the general tone of the market is much better. The indications are that in most lines prices will be firmly maintained this Spring. A number of good sales of Canada Plates, black sheets and galvanized iron have been made this week for Spring shipment. The only price changes of the week has been a reduction of 5 cents in bar iron. American houses are after business in Canada plates, but so far have not succeeded in placing many orders in Montreal. It is thought that they may succeed better in the West where the freight rates are more favorable to them.

Pig Iron—There is a firmer feeling in the pig iron market, but business is still on the quiet side. In the absence of much actual business it is hard to quote with exactitude but nominally prices are still as follows: Summerlee, $19.25 to $19.75; Carron, No. 1, $21; do., No. 3, $18.50 to $19; Middlesboro', No. 3, $17 to $17.50; Ayersome, No. 1, $20; do., No. 3, $19.40.

Bar Iron—There is considerable competition for business. Prices have been reduced 5 cents this week. We now quote Merchants' bar, $1.80; horseshoe iron, $2.05; forged iron, $2.

Black Sheets—Business this week shows a big improvement. We hear of a number of good sized orders having been booked this week for Spring shipment. Inquiries have been numerous and prospects are bright for a big trade this Spring. We quote: 28 gauge, $4.25; 26 gauge, $2.40; 22 to 24 gauge, $2.35; 18 to 20 gauge, $2.30, and 8 to 10 gauge, $2.40.

Galvanized Iron—The above remarks apply also to galvanized iron. Last week we reported actual business slack, but this week we can tell of some good orders which have been placed for Spring delivery. We quote as follows: Gorbal's "Best Best," $4.30; 28 Queen's Head, $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates—Tinplates are now very firmly held on account of the strength of the tin market. A few sales are reported this week. We quote: Cokes, $3.75 and charcoals $4.

Terne Plates—As was noted in our last week's report, terne plates are slightly cheaper for import, but no change is likely to be made in quotations from stock. Prices range from $6.75 to $7.

Ingot Tin—Since our last report there was a temporary weakening in the market for ingot tin, but prices are now quite firm. Local quotations are 32 to 32 1-2 cents.

Coil Chains—Trade continues fair. We again quote as follows: No. 6, 10c.; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 3-8-in., $4; 7-16-in., $3.80; 1-2-in., $3.70; 9-16-in., $3.55; 5-8-in., $3.35; 3-4-in., $3.30; 7-8-in., $3.25; and 1-in., $3.20, with 10c allowance on carlots.

Canada Plates—As was noted above, a number of large sales have been made this week for Spring delivery and the trade are expecting a continued activity. We quote as follows: 52s., $2.30 60s., $2.35; 75s., $2.40; full polished, $3.60, and galvanized, $4 to $4.10; galvanized 60s., $4.25 to $4.35.

Steel—Trade this week is only fair. Prices have been slightly reduced and we now quote as follows: Sleighshoe, $1.90; tire, $1.95; spring, $2.70 to $2.95; toe calk, $2.55; machinery (iron finish) $2.45; square harrow, $2.45.

Tool Steel—A satisfactory volume of business is passing at the following unchanged prices: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Jonas & Colver's, 10 to 20c; "Air Hardening," 50 to 65c. per lb.; Conqueror, 7 1-4c.

Copper—Ingot copper continues very firm, but last week's quotations of $13.50 to $13.75 per 100 lbs. still obtain. Sheet copper is quoted at 22 cents for basis size (6 feet by 4 feet). Usual extras added. Roll copper is quoted at 21 to 23c. per lb., the latter price obtaining for small quantites.

Pig Lead—Quoted at $3.20 to $3.30.

Sheet Zinc—Business is fairly active at steady prices. We quote $6.15 to $6.25 for cask lots; smaller quantities, $6.50.

Zinc Spelter—The price is 6c.

Scrap Metals—Trade continues very quiet and there are no price changes to quote. We again quote the following prices: Heavy copper and wire, 9 1-2 to 10c per lb.; light copper 10c.; heavy red brass, 10c.; heavy yellow, 8 1-2c.; light brass, 5 1-2c.; lead, 2 1-4 to 2 1-2c.; zinc, 2 3-4 to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $13 to $15; stove plate, $12; mallable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers 6 to 6 1-2c. per lb.

Ashes.

As there are no pearls on the market quotation for same are merely nominal. The market continues firm at unchanged prices. We quote.

ONTARIO MARKETS.

Office of HARDWARE AND METAL,
10 Front Street, East.

Toronto, January 23, 1904.

Hardware.

WHILE the movement from stock is still small the reports sent in by travellers from all sections is most encouraging. Retailers have about sized up the situation and are placing orders with a confidence that is adding materially to the steadiness of the market. The position taken by "Hardware and Metal" for some time. that the industrial activity combined with the brisk building operations in the older sections of Canada and the heavy immigration and railroad construction in the north and west is sufficient to more than offset any effect the depression in the United States may have on the market, is now freely upheld by jobbers as well as manufacturers. This is likely to have two results, to stiffen prices on the Canadian and weaken the movement towards higher protection for Canadian manufacturers. It is, however, generally held that the Canadian tariff might be revised in some particulars to advantage. Advices from the United States are most encouraging this week. Canadian jobbers, remembering the severe checks to building operations in New York and other cities last Summer, have been anticipating heavy stocks and easy prices in builders' hardware and were somewhat surprised to receive notices of an advance of 10 per cent. from several of the large houses, notably Sergeant & Co., Yale & Towne, and the Reading Hardware Co. These advances go into effect on the 1st of February. The skate trade is over and there is now but a small sorting trade in sleigh bells, robes, etc. The snow shovel business keeps large. Cut nails are now 15c. lower than wire nails. There is not much movement in either. Some business is opening up in harvest tools which are being sold by local jobbers at the same prices as last year. Other prices are steady.

Screen Wire Cloth—Orders are coming in fairly well at the new prices, $1.50 per 100 square feet.

Spring Hinges—Orders are coming in fairly well. Prices are steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—A good business is being done for later delivery. Prices are firm, the recent advances last week in wire rods and wire products in the

United States having an excellent effect on this market. Prices are now steady as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8, and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. per 100 lbs. extra charged.

Barb Wire—Good orders are being booked at steady prices. We now quote as follows: $2.75 per 100 lbs. f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—A good trade for later delivery is reported. Prices are now as follows: No. 9, $2.70 per 100 lbs. f.o.b. Cleveland, freights equalized with factory points at Hamilton, London, Welland or Windsor and allowance to other points up to 25c.; carlots, $2.65, freight allowance to 20c.

Wire Nails—A strong situation has developed since last week's advances in the United States and a good trade is doing with the base price for ordinary lots firm at $2.45 per keg f.o.b. Toronto, with carlots $2.40.

Cut Nails—The market is not strong and there is not much doing even at the reduced price, $2.30 per keg f.o.b. Toronto.

Horseshoes—A nice trade for future delivery is reported, with prices fairly steady. We again quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horsenails—The volume of orders received to date is fully as large as up to this time last year. We quote discounts: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Screws—Business is well up to mark. Prices are steady. We quote as follows: Flat head bright, 87 1-2 per cent. discount; round head bright 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Business is improving at steady prices. Our quotations are: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—Some of the manufacturers are having labor troubles, the men refusing to accept a reduction in wages. On the whole, though, the situation is steady with prices firm. We quote the following prices: Carriage bolts, common ($1 list), 3-16 and 1-4-in., 60 per cent.; 5-16 and 3-8-in., 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—There is a fair business doing. Prices are firm both for binder twine and for rope. We quote as follows: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11 1-2c.; single lathyarn, 11c.; double shingleyarn, 11 1-2c.; single shingleyarn, 11c.; sashcord "Hercules," 30 to 32c.; "Star," 38 to 40c.; cotton rope, 3-16-in. and up, 20 1-2 to 22c.; 5-32-in., 25 to 27c.; 1-8-in., 25 to 28c.; cotton twine, 3-ply, 22 to 24c.; 4-ply, 26 to 28c.

Skates—The season is about over and stocks are pretty well cleared out.

Snow Shovels—The frequent and heavy snowstorms have increased the sale of snow shovels, particularly of heavy weight. There is still a fair movement.

Woodenware—But a slight demand. Prices are unchanged as follows: We quote per dozen: Washboards, Victor $1.35; Crown, $1.45; Improved Globe, $1.60; Standard Globe, $1.70; Original solid Globe, $2; Superior Solid Back Globe, $2.15; Jubilee, $2.10; Pony, 95c.; Dominion King (glass), $3.10. Tubs, No. 0, $10.50; No. 1, $8.50; No. 2, $7.50; No. 3, $6.50. Pails, No. 1, 2 hoops, $1.75 and $1.90.

Building Paper—Building paper is dull this week. We quote: Tarred felt, $1.85 per 100 lbs.; 2-ply read roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c. per roll.

Cement—The cement market continues dull. Our quotations are: Canadian

Firebricks—Trade in firebricks is fair. Last week's quotations have advanced 2c. We quote English and Scotch each at 28 to 35c.

PLUMBING GOODS.

Trade in plumbing goods continues steady, but quiet. Our quotations are:

Lead Pipe—There is not much doing in lead pipe We quote as follows: Lead, 7c.; lead waste pipe, 8c.; discount 35 per cent.

Soil Pipe and Fittings—Business is quiet as usual at this season. We quote as follows: Light soil pipe, 45 and 5 per cent.; light soil pipe fittings, 50 and 5 per cent; medium and extra heavy pipe and fittings, 55 and 5 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

Iron Pipe Fittings—Trade is fair in iron pipe fittings. We quote the following discounts: Malleable fittings, 15 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs. niupsffecting busnes gpunHg Ipir7,aeug nipples, up to 2-in., 65 per cent.; nipples 2 1-2 to 6-in., inclusive, 60 per cent.

Copper Range Boilers—Business is steady. Last week's discounts at 15 per cent. continue unchanged.

Brass Goods--Steamfitters' brass goods are fair with steady prices.

Iron Pipe—Iron pipe is quiet this week. We quote f.o.b. Toronto as follows: 1-8-in., $3.25; 1-4 in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55; 2 1-2-in., $19.25; 3-in., $22.75; 3 1-2-in., $28.75; 4-in., $35.25.

METALS.

Business has started to open up nicely, a fair movement of all lines havng set in. Each week shows a development of strength on the market, for while there is no change in prices the steadier tone in the United States and Great Britain is having a decidedly good effect. Canadian buyers of pig iron are manifesting more confidence and there is less disposition on the part of furnaces to make concessions. Bar iron is held here in large stocks and competition in it is still keen Ingot metals are in good request at firm prices.

Pig Iron—Canadian furnaces are following the lead of United States iron producers and are more inclined to hold out for full prices. Practically no iron is being imported on this market. We quote $18.50 for No. 1 and $18 for No. 2.

Bar Iron—There is a good trade doing and prices, while not yet firm, are stronger than formerly We quote: $1.80 f.o.b. Toronto for extras cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft. 20c., over 20 ft. by special agreement according to length and size.

Black Sheets—Prices are unchanged, a fair business doing. We quote: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—A good movement is recorded at fairly steady figures. A small quantity of U. S. plates is being imported. We quote: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—The market is steady, a fairly good trade doing. We now quote prices at $30.50 to $31.50.

Galvanized Sheets—A fair trade is doing at steady prices. We quote: Queen's Head, $4.25 to $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.25 for 28 gauge; Gordon Crown, $4.25 for 28 gauge.

Tinplates—A strong feeling prevails. Competition is not keen. We quote as follows: Coke plates, bright, 14x20, $3.75; charcoal plates, $4.25.

Copper—There is a fair movement. Prices steady as follows: Ingot copper, $14, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—Business is good and quotations steady. We quote: $3.30 per 100 lb. for pig lead and $3.65 for bar lead.

Zinc Spelter—Prices show an upward tendency at primary market, but the local situation is unchanged at 6 to 6 1-2c. per lb.

Zinc Sheets—The market is firm and a fair business doing. We quote: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c., and wiping, 17c.

Old Material--There is little change in the situation since last week. Trade is fairly brisk at last week's quotations, which are as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c. per lb.; heavy red brass, 9 3-4c. per lb.; heavy yellow brass, 8c. per lb.; light brass, 5c. per lb.; lead, 2 1-4c. per lb.; scrap zinc, 3c. per lb.; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast crap, $13 to $14; stoveplate, $10; malleable and steel, $4; old rubbers, 6 1-8c. per lb.; country mixed rags, 50c. per 100 lb.

Seeds.

Very little seed is moving this week. Supply is scarce owing to heavy snowfalls blocking the roads throughout the country. Last week's prices continue unchanged. Our quotations are:

Red clover, per bush	5 50	6 00
Alsike "	4 75	5 75
Timothy, per "	1 15	1 50
" flail threshed		1 75

DURABLE, ARTISTIC AND NOT EXPENSIVE—

MANITOBA MARKETS.

Office of HARDWARE AND METAL,
Room 308 McIntyre Block,

Winnipeg, Jan. 18, 1904.

TRADE is quiet and wholesale houses are still busy stocktaking. There is a good deal of complaint as to slow collections, and there has been more paper renewed than was anticipated. The amount of collections are far in excess of last year, but compared to the increase in the volume of business, collections are decidedly slow. The slowness does not apply to the country as a whole, but to certain sections only, where wheat has moved slowly. Money is tighter than is usual at this time of year, and war rumors are having the effect of holding back the wheat still in the country, which tends, of course, to hold back collections.

* * *

An inquiry among the wholesale trade generally brings the information that collections are slow, in fact very considerably slower that was anticipated for January and there has been more renewing than was expected. Wholesale houses, especially in dry goods and hardware lines, are exercising some caution in their shipments of Spring orders. This is merely along the line that your correspondent wrote some six weeks ago. The movement of wheat has been smaller and though there is a fair demand at the present time there has been considerable holding back. The war news is giving the Western farmer the impression that he will make money by holding, and this is preventing the movement of money that otherwise might be in circulation.

The crop is considerably smaller than estimated, and a good deal of the more western wheat is of a low grade, and consequently brings low prices even when it is sold.

The merchants who have wisely confined themselves to a few houses will have no difficulty, because there is a mutual understanding of the position and consequent forbearance and extension of time, but the merchant who has foolishly spread his accounts among a great many firms is pretty sure to be harrassed, particularly by smaller creditors.

Western wholesale houses are not worrying over the situation in the least, knowing full well that it will right itself in time, but they all freely admit that collections are very slow and that a number of country merchants are finding it necessary to ask for renewals in many cases where previously they saved their discounts.

The Eastern wholesale houses would do well to ponder this matter carefully, for not a few country merchants complain that they are fairly harrassed by the calls of travellers for eastern houses who simply almost insist on selling them goods. These are too frequently young men whose zeal for large orders runs away with their discretion in the matter of credits. Money is tight just now and is likely to remain so for some months at least.

* * *

The Northwest Machinery and Iron Co. have received letters of incorporation with a capital stock ol $40,000. This is another being added to the list of manufacturers for the West.

* * *

The Massey-Harris Co. have created a new district extending from Gladstone to the Northwest Territories. The headquarters will be at Dauphin, and Mr. Jas. Johnson, who has been a general agent for the company, will take charge.

* * *

Prices of hardware have not changed during the week, but an important revision of the list may take place in time for the next issue.

PITTSBURG MARKETS.

From The Iron Trade Review, January 21, 1904.

WHILE specifications and new orders during the past week were not as good as during the first two weeks of the new year, the tonnage received by the mills in this district was satisfactory and on all sides the general condition is considered improving. The increased demand is limited almost entirely to the lighter lines, such as bars, wire products and nails, but this is hardly the season of the year to look for any decided improvement in structural shapes, sheets, tin plate and pipes and tubes. Specifications from steel car works in this district are somewhat larger, but naturally are far below normal. The demand for pig iron is decidedly limited, and until there is a general resumption of steel plants in this district, it is doubtful if there will be much improvement in the demand from the foundries throughout this territory, whose trade depends much upon the operation of the steel plants..

Pig Iron—The market in this district remains quiet and there has been little buying during the week. On Northern foundry No. 2 as low as $13.50, Pittsburg, was done on a single carload, but this is an exception, the usual quotations being from $13.60 to $13.85. On forge iron $13 seems to be the bottom, although it is possible that 25 cents lower would be done on a desirable tonnage. There have not been sufficient transactions in Bessemer to establish a market, which continues nominally at $13.85 to $14.10, Pittsburg. Southern iron which is held at $10, Birmingham, is not a factor in this market at present.

Wire and Wire Nails—Demand for wire nails and wire products continues strong, and heavy buying continues. We make the following quotations: Wire nails, carload lots, to jobbers, f.o.b. cars Pittsburg, $1.85, base; plain wire, carload lots, $1.75, base; barb wire, carload lots, $2.15 base; staples, carload lots, $2, keg. Galvanized, 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less than carload lots a further advance of 10 cents is charged. Steel and iron cut nails, carload lots, $1.70, and less than carload lots, $1.75, f.o.b. Pittsburg, plus freight to point of destination. Terms, 60 days, less 2 per cent. off in 10 days.

Bars—Demand for steel bars continues good and there is some buying covering the first six months of the year. On iron bars 1.30c. can be done, Pittsburg delivery, althought reports from the West indicate a firmer market. We make the following quotations: Bessemer steel bars, 1.30c.; open-hearth, 1.40c.; plow beams and cultivator beams, 1.30c. net; channels angles, zees and tees, Bessemer, under 3 inches, 1.40c.; common bar iron, 1.30c to 1.35c., Pittsburg.

Coke—On foundry coke quite a range of prices is being quoted. On Standard Connellsville from $2.15 to $2.50 is being secured, while lower grades can be had at $2. Furnace coke, strictly Connellsville, for delivery the first six months, is held at $1.50 to $1.60 and lower grades at $1.35 to $1.45. More than 600 ovens were fired in the Connellsville region during the week and for week ending Saturday, January 9, the production increased more than 40,000 tons over that of the previous week. The output of the upper region amounted to 135,375 tons as compared with 93,846 the previous week, while the lower region produced 36,916 tons.

IRON AND STEEL HOCKEY LEAGUE.

AN iron and steel hockey league has been formed in Montreal, and at time of writing three interesting and exciting games have been played. The league includes teams representing the following firms: Williams & Wilson, Drummond, McCall & Co.; James Robertson & Co., and Thos. Robertson & Co. The following is the schedule of games still to be played :

January 28.—Drummond, McCall & Co. vs. Williams & Wilson, 8 p.m. to 9 p.m., Victoria Rink.

January 29.—The Jas. Robertson Co. vs. Thos. Robertson & Co., 7 p.m. to 8 p.m., P. A. Rink.

February 4.—Drummond, McCall & Co. vs. The Jas. Robertson Co., 10 p.m. to 11 p.m., St. Lawrence Rink.

February 5.—Williams & Wilson vs. Thos. Robertson & Co., 7 p.m. to 8 p.m. P. A. Rink.

February 10.—Thos. Robertson & Co. vs. Drummond, McCall & Co., 9 p.m to 10 p.m., Victoria Rink.

February 11. — The Jas. Robertson Co. vs. Williams & Wilson, 8 p.m. to 9 p.m., Victoria Rink.

February 17. — The Jas. Robertson Co. vs. Williams & Wilson, 8 p.m. to 9 p.m.. Victoria Rink.

February 25.—Thos. Robertson & Co. vs. The Jas. Robertson Co., 10 p.m. to 11 p.m., St. Lawrence Rink.

The first game played by Drummond, McCall & Co. and Williams & Wilson, was won by the latter by a score of 2—0. As the score indicates, the game was close and hotly contested. The men and positions were as follows :

Williams & Wilson.—A H. Milroy, goal ; W F. Walsh, point ; F. J. McGoldrick, cover point ; M. Bronstetter, A. Gagne, H. Thomas and W. G. Young, forwards.

Drummond, McCall & Co.—W. E. Soden, goal ; J. Gouldthorpe, point ; K. Audras, cover point ; R. Tait, L. Martel, A. Brophy and G. A. Irwin, Forwards.

Referee.—E. Jeffrey.
Umpires.—L. Solomon, T. B. Reed.
Timekeepers.—J. M. Roy, W. Campbell and J. M. Wilson.

The second game was played on January 14th, at Victoria rink, the contesting

teams being those representing Thos. Robertson & Co., metals and heavy hardware, and Williams & Wilson, machinery. The former team won by a score of 2—0. The opposing teams lined up as follows :

Thos. Robertson & Co.—E. Bouchard, goal ; E. Gerow, point; P. Dunberry, cover point; H. Orsali, rover; J. H. Bedbrooke, right wing ; T. R. Lessard, left wing.

Williams & Wilson.—J. C. Barcelo, goal ; W. F. Walsh, point ; F. J. McGoldrick, cover point ; M. Bronstetter, rover; H. Thomas, right wing ; W. G. Young (captain), right wing.

Umpires.—H. White and Thos. B. Reed.

Timekeeper.—R. Mackay.

The third game was fought out on January 18th, on the St. Lawrence Rink, by teams representing The Jas. Robertson Co., saw and lead works, and Williams & Wilson, the engine and boiler dealers, the former winning by a score of 1—0. The men and positions were as follows :

Jas. Robertson Co.—W. Robertson, J. Corcoran, James Furey, Alex. Robertson, G. Snowdon, T. Kilcullen, C. Fagan.

Williams & Wilson.—H. Barrett, W. F. Walsh, C. Barcelo, M. Bronstetter, A. Gagne, W. G. Young, F. J. McGoldrick.

Umpires.—J. Clements and T. B. Reed.

Timekeepers.—George Lewis and H. Holmes.

Referee.—Fred. Farrell.

The standing of the league is, therefore, as follows :

	Won.	Lost.	To play.
Thos Robertson & Co	1	0	5
Jas. Robertson Co	1	0	5
Williams & Wilson	1	2	3
Drummond, McCall & Co.	0	1	5

Business Changes

ONTARIO.

THE Ontario Lantern Co., Toronto and Hamilton, have retired. W. Grose continues in business under the old firm name.

J. H. Malloy, general merchant, Sandown, is dead.

The assets of J. Louthier, general merchant, Wendover, have been sold.

A. C. Quode, proprietor of a saw mill, Strathroy, has assigned to S. McDougall.

Wm. McGill, of Wm. McGill & Co., coal and wood dealers, Toronto, is dead.

The estate of Park & Hodgins, general merchants, Sutton West, is to be wound up.

The premises of N. Beneteau, carriage maker, Windsor, have been damaged by fire.

J. N. Munshaw, general merchant, Woodburn, has advertised his business for sale.

A. Young & Son, hardware merchants, Wingham, have advertised their business for sale.

A. Foucar, dealer in stoves, tinware, etc., Rosemount, has advertised his business for sale.

A meeting of the creditors of R. W. Gray, harnessmaker, Fort William was announced for 20th inst.

A meeting of creditors of J. Reid & Co., general merchants, Thornton, is announced for 23rd inst.

H. F. McAllister, general merchant and miler, Ethel, has sold his general store to R. C. Davies & Co.

The premises of J. T. Hill, grocer, Hamilton, have been damaged by fire. Loss partially covered by insurance.

F. Elliott, tinsmith and general merchant, Toronto, has assigned to S. A. Paterson. Meeting of creditors 10th prox.

W. G. Harris, lime, flour and feed dealers, Amhurstburg, has made an assignment. Meeting of creditors advertised for 25th inst.

QUEBEC.

The Montreal Plating Co., Montreal, have registered.

Dussault & Powers, contractors, Levis, have registered.

The Montreal Paper Box Mfg. Co., Montreal, have dissolved.

The assets of J. Roy, tinsmith, are advertised for sale 22nd inst.

Wm. Sawyer, proprietor of a saw and grist mill, Sawyerville, is dead.

W. Germain & Frere, general merchants, St. Bazile, have registered.

B. Nerow, proprietor of a saw mill, St. Jerome, has effected a compromise.

The Shawinigan Electric So., Shawinigan Falls, have applied for a charter.

Hickey, Aubut & McGoldrick, plumbers, etc., Montreal, have dissolved partnership.

A. Bertin & Co., general merchant, Val Des Bois, have been burned out. No insurance.

Mattinson & Pope, plumbers and steamfitters, Montreal, have dissolved partnership.

V. E. Paradis has been appointed curator to J. N. J. Bissou, general merchant, Broughton Station.

The assets of J. T. Paradis, general merchant, Ste. Anne De La Perade, are advertised for sale on the 23rd inst.

The assets of J. C. Lemire & Co., general merchants, St. Guillaume D'Upton, are advertised to be sold on the 22nd inst.

S. Sauve, general merchant, St. Stanislas De Kostea, has assigned to Bilodeau & Chalifoux, and his assets have been sold.

NOVA SCOTIA.

The parnership has been registered for F. A. & J. W. Simson, general merchants, Grand Pre, to do business under the firm name of Simson Bros.

MANITOBA AND N.W.T.

The Great West Saddlery Co., Calgary, have sold their retail business.

P. Winram & Co., general merchants, Manitou, have sold out to E. Gill.

McArthur & Lyons, general merchants, Griswold, have sold their Griswold business to Tipling & Belden.

The Riley & McCormick Co., wholesale and retail dealers in harness, Calgary, are applying for a charter

NEW BRUNSWICK.

The Canadian Plumbing Improvement Co., St. John, and the Kent Electric Co., Richibuct, are applying for incorporation.

PERSONAL MENTION.

Mr. William Leach has opened a hardware store in Pembroke, Ont.

Mr. T. F. Simpson, of The Verity Plow Co., Brantford, Ont., has returned from a trip to England.

Mr. Charles Beland, hardware merchant, Montreal, was a guest at the Hotel Frontenac, Quebec, this week.

Mr. Hugh Fletcher, of the Dominion Geological Survey, has returned from an extensive examination of the coal fields in Nova Scotia.

Mr. J. Flath, formerly with Mears Bros., hardware dealers, has joined the staff of The Moose Mountain Lumber & Hardware Co., Moose Mountain, Man.

Mr. Andrew J. Jeffrey, formerly in the hardware business in Montreal, has been appointed to the vacancy in the Inland Revenue Office at Stratford, Ont.

Mr. H. J. Scott, Kingston, has bought a controlling interest in the Telfer Mfg. Co., Toronto, the style of which is to be changed to the Scott Mfg. Co.

The Eureka Mineral Wool & Asbestos Co., 74 York street, Toronto, have been appointed to represent The Cling-Surface Mfg. Co., Buffalo, in Ontario and the Northwest.

Mr. Geo. B. Frank, contracting agent of the Syracuse Smelting Works, Montreal, starts on a trip to the north next week. He may visit points in Manitoba and the Northwest before returning.

Mr. James Young is retiring from service with the B. Greening Wire Co., Hamilton, after 30 years' serice as bookkeeper with that firm. On the eve of his departure Mr. Young was presented by

STACY BROS., ARK WORKS, Bishop St., SHEFFIELD, - ENGLAND.

No. 8816.

Manufacturers of all kinds of Cutlery, including Shell Bolster, Ivoride, Tables and Carvers, Butcher Knives, Steels and Pocket Knives, also Electro-Plated Fish Eaters and Desserts.

THE SITUATION IN CHARCOAL IRON.

WHILE stocks of coke and anthracite pig iron were practically stationary throughout December, stocks of charcoal iron increased 50 per cent. and on December 31 were between 90,000 and 95,000 tons. This was 13 per cent. of the total pig iron stocks on hand at merchant furnaces on that date, whereas charcoal iron constitutes but a little more than 2 per cent. of the total pig iron production of the country. The active capacity of charcoal furnaces increased steadily in the months of October, November and December in the face of the drastic curtailment in coke iron production in those months. This does not mean that the charcoal iron business has gone on prospering while other pig iron interests have been depressed; for the 30,000 tons increase in charcoal pig iron stocks in December was equal to almost an entire month's average production, as shown by the statistics of 1902, when the output of charcoal iron was 378,504 tons. The fact is that the charcoal furnaces find it difficult to stop in the way that the coke furnaces do. The wood operations of the charcoal furnaces, in order to be carried on economically, have to be handled when hauling can be done on snow. Winter is therefore the time of low-cost production for such furnaces, and it is probable that a still further accumualtion of charcoal iron stocks may be recorded in the next two or three months. Eventually, unless business shows decided improvement, there must be a very considerable curtailment of output of charcoal iron, which will thus appear in the statistics some time after the low point in coke iron production has been touched.—Iron Trade Review, Jan. 21.

A CORRECTION.

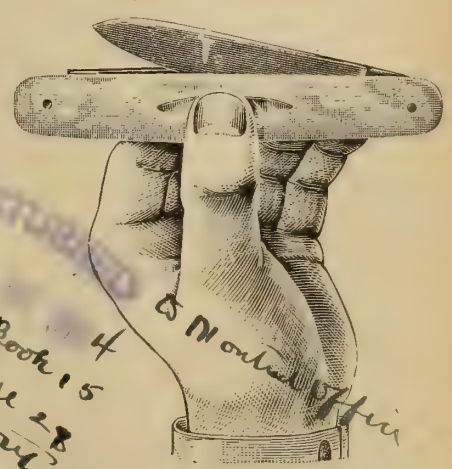
Editor "Hardware and Metal."

Having several times within the last two weeks been told that at one of the recent hardware meetings held in Montreal a party made the statement that The Pittsburg Steel Co. wire mill only had a capacity of 30 tons per day, I send you under separate cover new catalogue to show what the mill is like. This man is either wilfully malicious or blissfully ignorant, perhaps both; if so, more to be pitied than blamed.

JOB W. TAYLOR,
Canadian representative The Pittsburg Steel Co.
Montreal, Jan. 16, 1904.

SELF-OPENING KNIFE.

THE accompanying illustration shows a novelty in cutlery which is being introduced to the Canadian market by Singleton & Priestman of Pond Hill, Sheffield, England. Every person knows by experience how exasperating it is to have to open a stiff pocket knife. By a very ingenious device this pocket knife can be opened with gloves on and broken thumb and finger nails are made absolutely impossible. On each side of the handle is a little shield and the blade springs open in response to a slight pressuse of this



shield. The illustration shows how it is done.

The blades are of finest quality steel and the knives are in every respect high class. They are made in four classes of handle, ivory, stag, scored horn, and pearl. Prices vary of course with the quality of handle provided. Further information regarding these knives can be obtained by addressing Mr. James Grant, 810 Palace Street, Montreal. Mr. Grant is representing Singleton & Priestman in Canada.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITICISM

Edited by John C. Kirkwood, TORONTO.

NOTE—Hereinare discussed the principles and practice of advertising. Subscribers are invited to send Mr. Kirkwood specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

SPECIAL SALES.

THE big departmental stores afford examples of business methods and of advertising that can be profitably studied by retailers everywhere. One of the striking innovations introduced by them is the white goods sale and the furniture sale, the one held throughout the month of January, the other throughout August. These months were not, prior to the inauguration of these sales regarded as seasonable for the exploitation of such goods. The inducement of special prices has led the public to purchase white wear and furniture two or three months earlier than they would otherwise do. The department stores have been able to stimulate trade and to convert dull months into active ones by such means. Out-of-season sales are worth while, and their introduction in the less pretentious stores throughout the country, I am convinced, would be good business.

Such a sale has to be planned for many weeks in advance, and all details must be carefully thought out. The better the preparations the more assured the success. Every day of the sale period must be considered. By this I do not mean that daily programmes are to be mapped out, though this might be done. Sufficient stock must be either purchased in advance or else quickly available should fresh stock be necessary. The salesmen must be made enthusiastic, and their enthusiasm sustained. If the salespeople are indifferent, the whole effort is likely to fall flat. The store arrangement should be altered to some appreciable extent both to facilitate rapid selling and to emphasize the occasion. The windows should be frequently changed.

Price cards are an absolute necessity if the best results are to be obtained. In addition to the foregoing, liberal advertising in the local papers and by special circulars are imperative. The special sale lends itself admirably to advertising. Public interest can be aroused through striking announcements in the daily or weekly papers. During the progress of the sale extra and generous space should be engaged and every issue of the paper should contain a goodly list of whatever is included in the special sale. Give prices, of course, and state both the regular and the sale price. Don't overstate the regular price; and let the special price be as low as it can be. Don't indicate the reduction by a percentage quotation, but give the net figure. For example, suppose the article advertised is sold regularly for 30c. Don't say "20 per cent. off," but say, "Sale price, 24 cents." Customers don't care anything about percentages. What they want is net figures. Indeed, when dealers talk of 20 per cent. a good many people are inclined to say, "Oh, that's no very great reduction," and become suspicious that there is still left for the merchant a good and sufficient profit. Advertising by discount reductions never apeals to me, and I believe does not appeal to the majority of people.

Can the hardware dealer conduct such sales? In answer I reproduce an advertisement taken from an Ontario newspaper.

TO EMPLOYERS.

The undersigned labor agent is prepared to forward help to employers who are short-handed. Picked hands of any trade procured on shortest notice, paying own passage. Over 800 registered. Term moderate. F. C. SMITH, 22 Penton street, London, Eng. (14)

Those who have seen the Toronto daily newspapers during this month will have noticed that the city's two big department stores have been conducting a January sale of graniteware. Perhaps a graniteware sale suggested itself to Messrs. Silvester & Dougherty through what the department stores were doing. In any event, the idea of such a sale is to be commended and it is sincerely to be hoped that this firm of hardware dealers are receiving the reward due their watchfulness and enterprise.

Their advertisement, however, is sadly lacking in some of the qualities that go to make all advertising good. I am forced to think that Silvester & Dougherty are not making their sale as interesting or as successful as it could be made. It seems to me that there is a lack of enthusiasm shown in their advertisement. If the sale were possessing their whole energies and thought, they would find it difficult to keep out of their advertisement a suggestive list with prices, both regular and special attached. I think, too, that for the occasion the space engaged is inadequate. (The advertisement is reproduced exact size of original.) The very life of such a sale and such an advertisement is the special prices at which graniteware is being sold; "25 per cent. reduction" is emphasized twice over, but while this certainly suggests a saving, it does not illustrate one. How much more convincing, more forceful, would this advertisement be, did it contain items similar to the following?

36 only medium-sized Graniteware Teapots; regular 38c.; sale price..... **28c.**
25 only Graniteware Preserving Kettles, holding 12 Imperial Pints; regular 48c.; sale price..... **36c.**
Saap Dishes; regular 12c.; sale price... **9c.**
Sink Strainers; regular 24c.; sale price.. **18c.**

There are many family needs that require merely to be sugested, coupled with a slight inducement in the way of price, to be supplied forthwith. It is surprising how much people can be induced to buy through tempting suggestions. All of us can recall numberless experiences when we were induced to buy goods of one sort and another through their tempting display, or through the persuasive talk of a bright salesman. Everything done by the hardware dealer in this direction will be repaid not alone in larger sales and increased profits; but also in the better coin of self-growth and sales-power.

PAINT, OIL AND BRUSH TRADES

Meeting of Shareholders.

THE annual meeting of the shareholders of the Canada Paint Co. was held at the head office of the company, 572 William street, Montreal, on Saturday, January 16th. It was well attended.

Mr. S. F. McKinnon, of Toronto, was in the chair and in reviewing the work of the company as shown by the statements laid before the meeting he expressed his great pleasure at the progress made during the year. He was perfectly satisfied with the results of the year's trading. The other shareholders present were unanimous in echoing the president's remarks. They were particularly pleased to note that in spite of keen competition in some of the staple lines the percentage of profits had been maintained owing to the increase in the volume of general business and the close attention to economy in all departments.

Mr. Geo. H. Balfour was elected to the board of directors in place of Mr. W. T. Murray, deceased since the last annual meeting. All the other members of the board of directors were re-elected.

"Ripolin."

A SPECIALTY in high-grade paints which should be of interest to all paint and oil men who are anxious to capture and retain a high-class trade is being offered in Canada by J. A. & W. Bird & Co., of Boston, through Mr. J. B. Gass, manager of their Canadian branch in Montreal. "Ripolin" enamel paint which is now being introduced to the Canadian trade is made in Holland, the land of neat and attractive tile effects, but the above mentioned firm have the agency for it in the United States and Canada. In the course of a few minutes' conversation last week with Mr. Gass, a representative of "Hardware and Metal" was shown some very interesting samples of work which has been done with this paint. Some plaster which had been treated first with an ordinary filler of white lead and then given two coats of "Ripolin" had a very handsome smooth apearance which could not be distinguished from a tile effect. A piece of tin painted with "Ripolin" had also a very glossy, handsome appearance, and strange to say, although the strip had been twisted and bent there was not the slightest sign of a crack on the paint.

"Ripolin" is not a cheap paint. High class effects of this kind are worth paying for and taking into consideration the high class work which can be done with it, "Ripolin" is not expensive. It has an extraordinary coloring capacity, for with one gallon some 65 square yards of surface can be given one coat. The finish is equal to that of the best varnish and as the expense of varnishing is thereby rendered unnecessary, there is a considerable saving not only in the cost of material used but also in labor.

"Ripolin" is suitable for indoor and outdoor work. It does not detach nor scale off as the experiment with the piece of tin conclusively proves. It will also resist the most unfavorable aetion of sun, weather or wind. It might be mentioned that it would make a very high-class finish for bath tubs.

Mr. J. B. Gass, 426 St. Paul street, Montreal, is the manager of the Canadian branch of the firm of J. A. & W. Bird & Co. He will be pleased to give further information regarding "Ripolin" to any readers of "Hardware and Metal" who are interested.

Paint and Oil Notes.

R. C. Miller, importer of oils, varnishes, etc., Montreal, has registered.

The Brantford Painters' Union have elected James Sharp as president and C. Jones as secretary.

The Francis Frost Co., Limited, are shipping a car of their "Ark" brand paint and specialties to their Vancouver and New Westminster, B.C., customers this week.

The Savannah News says that turpentine prices advanced 1-2 to 1c. a day last week and prophesies still higher quotations, due to manipulation by strong interests.

Much interest is being taken in the convention of the Master Painters' Association, to be held in Toronto the last week in February. Delegates will be present from various parts of the United States as well as Canada.

Hollywood Paint

Paste---Ready Mixed---Floor

Since notifying the trade 1st of this month that we have secured the exclusive sales agency in Canada and Newfoundland for this celebrated brand of paint, we are daily in receipt of letters from Merchants who have been handling it, advising us that they are well pleased with the agency and would not like to loose it. Here are samples of what they say :

"I anticipate a good season, have great faith in the Paste Paint. I have sold a great deal of————make, but it is not in it. I am better satisfied now."

"Have worked up a big trade, customers well satisfied, and do not wish to loose the agency."

Be wise, secure the agency in your town.

DON'T STAND IN YOUR OWN LIGHT

If you are not carrying a line of "Ark" Brand Paints you are certainly standing in your own light. Don't do so any longer, but write us to-day and secure the agency for your town.

Make "Ark" Brand Paint Your Standard for 1904,

as our Bridgeburg customer intends doing after carrying the line for years. Here's what he says about it:

BRIDGEBURG, Jan'y. 2nd, 1904.

Messrs. The Francis-Frost Co., Limited,
Toronto.

Gentlemen,—I have sold your "Ark" Brand and other paints for many years, in fact, ever since you first introduced them to the Canadian trade, and I have used a great deal of it myself, and I have always found it gives satisfaction. It was the only paint I bought during 1903, and it will be my standard for 1904. Wishing you a prosperous year's business.

Yours truly,

JOHN T. JAMES.

You cannot speak too highly of "Ark" Brand Paint, and the man who buys it will never prove you wrong. "Ark" Brand Paint is right.

Paint and Oil Markets

MONTREAL.

Interest still centres in the rising turpentine market. During the last week almost every day has seen an advance and our quotations this week are 6 1-2 cents higher than those quoted in our last issue. Prophets have ceased to prognosticate what the ultimate price will be as the evidences are only too strong that a steady climb is being experienced in this article and it is difficult to say when the halt will be called. A steady movement in both Canadian and English Paris green has been noted during the past week and it is expected that this will continue for some time. The market is steady at our quotations and a free movement is reported generally. Dry white lead is firmer in England, and it is hinted that the present low quotations for ground white lead will soon be withdrawn. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Red Leads.—Genuine red lead, in casks, $4.25; in 100-lb. kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge.—Ground, casks, 5c.; in less quantities, 5 1-2c.; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47c.; 5 to 9 barrels, 46c.; boiled, 1 to 4 barrels, 50c.; 5 to 9 barrels, 49c. Delivered in Ontario between Montreal and Oshawa at 2c. per gallon advance.

Terms 2 per cent. 30 days; 90 days net.

Turpentine—Single barrels, 96 3-4c.; 2 to 4 barrels, 95 3-4c. Standard gallon of 8.6 pounds. Terms 2 per cent. 30 days; 90 days net.

Benzine.—25 to 26c.

Shellac Varnish.—Pure white, $2.60 to $2.80; pure orange, $2.60 to $2.80; No. 1 orange shellac, $2.40 to $2.60.

Mixed Paints.—$1.20 to $1.40 per gallon.

Castor Oil.—8 3-4 to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Canadian Paris Green Barrels. 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15 1-4c; 1-lb. packages, 16c.; 1-2-lb. packages, 18c.; 1-lb. tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green.—50 and 100 lb. drums, 15c. per lb.; 25 lb. drums, 15 1-2c; 1-lb. paper boxes, 16c.; 1-lb. tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

TORONTO.

The advance in turpentine is still a feature of the situation. It is evident that the Savannah market, the great centre of production is well under the control of manipulators and that they are disposed to squeeze the last cent possible out of the buyers. Prices are moving higher almost every day, the result on this market being an advance of 4c. in the week. Flaxseed is higher at Chicago, but the Canadian market shows no sign of being affected. White lead and red lead prices are being cut up considerably as are also putty and Paris green. The Paris green trade is a difficult one to understand. The quotations of Canadian manufacturers and the importing houses are nominally unchanged, yet some of the leading jobbers are quoting 1c. below these quotations all along the way. The result of this condition of affairs is that prices are without stability. Some dealers are also quoting prices on putty, red lead and white lead 15 to 25c. below general quotation. There is a fairly good business though, of course this is the quiet season of the year.

White Lead—Ex-Toronto, pure white lead, $4.75; No. 1, $4.30; No. 2, $4; No. 3, $3.60; No. 4, $3.35 in packages of 25 lb. and upwards; 1-2c. per lb. extra will be charged for 12 1-2-lb. packages; genuine dry white lead, in casks, $4.87 1-2.

Red Lead—Genuine, in casks of 560 lb., $4.25 to $4.50; ditto, in kegs of 100 lb., $4.75; No. 1, in casks of 560 lb., $4;

Litharge—Genuine, 6 to 6 1-2c.

White Zinc—Genuine, French V.M., ditto, in kegs of 100 lb., $4.25.

in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c. per gallon.

Paris White—90c. to $1 per 100 lb.

Whiting—60 to 65c. per 100 lb.; Gilders' whiting, 75 to 80c.

Shellac—Pure orange, in, barrels $2.45; white, $2.60 per gallon; No. 1, 15c. less; in less quantities 30c. extra, including price of can.

Pumice Stone—Powdered, $2.50 per cwt. in bbls., and 4 to 5c. per lb. in less quantity; lump, 10c. in smal lots and 8c. in bbls.

Linseed Oil—Raw, 1 to 2 bbls., 50c.; boiled, 53c.; 3 to 5 bbls., raw, 49c.; boiled, 52c.; 6 to 9 bbls., raw, 48c.; boiled. 51c., delivered. To Toronto, Hamilton and London, 2c. less.

Turpentine—Single bbls, 96c.; 2 to 4 bbls., 95c., delivered; 5 bbls. and over, open. Toronto, Hamilton and London, 2c. less. For less quantites than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

Glues—Broken sheet, in 200-lb. bbls., 8 to 8 1-2c. per lb.; cabinet glue, in bbls.,

ADVERTISING

is a great help to the dealer in selling ready-mixed paint, but unless the quality of the paint is the best, the advertising counts for nothing. A customer will shun a store that supplies inferior goods, after they have been loudly advertised.

ANCHOR LIQUID PAINT

is not only advertised well, but the paint itself is unsurpassed. It is the only one in Canada containing the world famous white lead—BRANDRAM'S B. B. GENUINE. Our thirty years of experience should count for something, and with us it does.

"The proof of the pudding is in the eating."

Send us a post card and let us tell you all about it.

Wall Paper Items.

THE manufacturers of linerusta advise using plaster of paris in the paste, but it is liable to cause shrinking. Fish glue is better, and Glutol better still.

Use a roll of paper when you are hanging a ceiling. Nothing nicer for holding the paper against the ceiling.

Never hammer linerusta while it is soft, as it will make dents in it.

If paste is insufficiently scalded, or if too much water is added, it will turn watery.

Heavy flour is that made from Winter wheat, and it makes the best paste. Pastry flours make poor paste. Spring wheat makes a watery paste.

To make good paste, add water that you can keep your hand in comfortably, to 4 pounds of flour; make into a batter, then stir in, gradually, 1 to 6 quarts of boiling water. Some flour will take more water than others.

It is important to stir the boiling water in very gradually. Stir briskly. Let the batter be well beaten, too.

In hanging heavy felts it is well to put alum in the paste, because it has a tendency to set the color and make paste dry quicker.

Sometimes a felt will burn out on fresh plaster, but when the place is repapered, even with the same felt, and the next day it will usually not burn out again. Some lime is more caustic than other. Wood-burned lime will not burn out felts.

It is cheaper to buy ready-made paste than to make it, counting your time as worth something. Otherwise it pays to make it.—The Master Painter.

A Dainty Wall Paper Design—Two-band border, 2490.
Made to match ingrains. Also matches wall 1490. Made by Staunton's, Limited, Toronto.

WINDOW GLASS.

MONTREAL.

As was noted last week, the 1904 prices on import glass are slightly lower than those of 1903. Trade this week is quiet and on what little business is passing prices are now being well maintained. We again quote: First break, 50 feet, $1.70; second brake, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

A better demand from stock is now reported. Prices are nominally unchanged as follows: Star, under 26 in., $3.10; 26 to 40 in., $3.30; 41 to 50 in.,

TRADE IN COUNTRIES OTHER THAN OUR OWN.

U. S. Iron and Steel Outlook for 1904.

THE outlook in iron and steel for the year we are entering is somewhat mixed. Prophecies are usually wrong in any case; it is a natural law that the market will move the opposite to what the trade expects and prepares for; e. g., the boom of 1899 came because the trade was not expecting anything of the sort and was not prepared for supplying the demand.

In making any prophecy, however, one must be careful to define the view point. Production in 1904 may show a big increase over the present rate, and still make the year fall far below that of 1903. Prices may be slightly lower than they have averaged the past three months and yet be more remunerative.

Production of pig in 1903 is as likely to prove slightly more as slightly less than that in 1902, 17,821,307 tons, which broke all records. We are entering the new year at a rate of about 13,000,000 tons annually. By the middle of January this will have been increased by fully a million tons simply through the resumption of blast furnaces which are already definitely scheduled to go in. There will be others, and altogether production by the end of the month will be at a much greater rate. Will the market stand this increase? Perhaps not, but on the other hand the general demand for iron and steel has been so extremely light for months that it is scarcely possible that by Spring consumption will not be much heavier. One is inclined to believe, therefore, that the low point in pig iron prices for 1904 will be reached the latter part of January. Production for the year will hardly equal 1902 or 1903, as it must be borne prominently in mind that the 1903 production was made mainly in the first half. The second half production was at the rate of between 16,000,000 and 16,500,000 tons a year, the first half being at the rate of 19,500,000.

We can, therefore, have a year in which production will fall below last year, and yet in which there will be a gradual improvement in the market demand and fairly remunerative prices.

Particular interest attaches to shapes, plates and rails. Prices in these three lines are unchanged from the official rates adopted early in 1901, and held through thick and thin by the big mills, except that some of the small mills exacted heavy premiums at times. That was on only a small tonnage of business, however, and must not be given undue prominence. If the iron market passes through the enormous slump we have had, when pig iron production in December was only a little over half what it was in May, when prices of pig iron at furnace in less than 12 months have been cut in half, and when other products, such as coke, iron bars, sheets, etc., have had large declines, and maintains rails, plates and shapes without any concession at all, it will have accomplished something of which the interests back of this effort to keep prices steady will have reason to be proud. In conditions where consumers look for a reduction, the experience is that some nominal concession is made at least, if only out of pure courtesy. But a good part of the work has been done already and it remains only for the finishing touches to be put on in the way of some slight increase in demand to put the whole market in a flourishing condition and restore confidence in the stability of prices.

It is particularly reassuring that the various wage reductions, which are practically general throughout the iron and steel and coke industries, have been made without any friction. These reductions were absolutely necessary, but if iron and steel workers were no better able to understand conditions than workers in other crafts there would have been a great deal of trouble. Think of the plumbers of the Pittsburgh district having been on a strike for two months, during which time no one hears anything about it because the employers simply put on their overalls and did all the work themselves. This interesting strike is not a strike against a reduction, but a strike for increased wages. If iron and steel workers were like plumbers one can hardly estimate the amount of trouble there would be now.—Metal Market.

Advance in Wire Products.

The advance in wire products which we have predicted from time to time as very likely to occur in January has just been announced. It is 5c. a hundred pounds all the way through, and some in the trade are now looking for another advance a month or so hence.

The new price is $1.75 on plain wire and $1.85 on wire nails, base, f.o.b. Pittsburg plus full rail freight to destination, in large lots to large jobbers. Small jobbers and large retailers, who buy in carloads, ate forced to pay 5 a hundred advance. The advance is made by all the producers, and we are positively informed there is absolutely no shading now, either at nearby points, or of the freight advance to distant points.

The mills are sold up pretty well for 60 days hence. Most large buyers are covered to March 1, but there are some of consequence who are not covered. The advice now given to them is that they should cover at once, or they may be caught by the next advance, which it is thought the mills have in contemplation, before they get sold out.

We just learn now that on last Thursday the cut nail makers met and reduced their official price 20c., to $1.70 a keg, base, for iron or steel cut nails, f.o.b. Pittsburg in carload lots. The former official price of $1.90, while it held for a while after it was promulgated, was being shaded to $1.80 at the first of the year, quite generally.

The action of the cut nail makers was taken without knowledge of the advance in wire nails just announced. It probably, however, would have been made just the same, as the two products, while they are both nails, are used by quite different people. As compared with two weeks ago, there has been a relative change in the price of the two products of fully 15c. a keg, but it would take several months before this would work out to increase the consumption of cut nails at the expense of wire nails, and then it would be only to a limited extent.

The present price of wire nails is the same price as prevailed in the closing months of 1902, after a big official cut had been made, followed by gradual shading. January 2, 1903, an advance of 5c. was made, putting the wire market 5c. above what it is now. February 22, 1903, a second advance was made, putting wire 15c. higher than the present price.

Towards the end of the year a steady decline occurred, until there was no official price. About the middle of December the market suddenly firmed up a few cents a hundred, to the price which has ruled until the 5c. advance just announced.—The Metal Market.

EQUITABLE LIFE CALENDAR.

"Hardware and Metal" acknowledges the receipt of a very handsome calendar from the Equitable Life Association. It is in the form of a hanger with six cards illustrated with a little girl in the act of playing school, graduating, bridesmaid, bride, mamma, and grandma. It is an extremely pretty idea well wrought out.

STOVES AND TINWARE.

A Busy Stove Season.

MANUFACTURERS of stoves, ranges and furnaces are anticipating a busy season during 1904, and are, as a rule, making their plans in accord with that view.

There is, too, reason for such an expectation. Last Summer ended with a shortage of buildings in almost every section of the Dominion. In Manitoba building was somewhat delayed by the stiff prices of lumber; in Ontario, strikes in many of the chief cities restricted building operations in a marked degree. The consequence is that unusual activity is looked for in the Spring, particularly as business conditions are more favorable than was anticipated.

Building operations are a fair criterion of the heating trade, especially the furnace trade. Householders are now demanding economical and capable heating appliances, and one of the chief considerations between landlord and tenant today is the method of heating. Hot-water heating is undoubtedly coming more and more into favor. At the same time the furnace is being installed in many houses where a generation ago the base-burner stove would have been used.

This development has not, however, caused any appreciable diminution of the demand for stoves and ranges, for the reason that all along the line there has been a tendency to use a better class of stoves and ranges. This leads to the purchase of modern ranges of the best patterns to take the place of old-time cook-stoves, which have done good service for so long that their usefulness is quite gone. This demand for the best stove that the householders can afford is one which can easily be developed by judicious work by the retail trade. It is, in fact, so prevalent, that all manufacturers take it into their calculations in preparing for a good season in 1904.

A New Aluminum Solder.

Nelson W. Miller, of Tiffin, Ohio, advises us that he has been working for several years with a view of producing an effective aluminum solder. He claims that he has been successful in evolving a solder and flux which will do the work of joining aluminum with absolute efficiency while overcoming the drawbacks which have been found in aluminum solders heretofore put upon the market. Mr. Miller has sent us samples of aluminum in different forms, in connection with which his solder has been used, together with a small sample of the solder itself. These specimens show that the joints are thoroughly made, without discoloration of the aluminum or of the solder. He states that these specimens have stood the test of more than two months, and he is convinced that they will last indefinitely. He has worked upon this aspect of the problem for a long time and claims that the solder and the aluminum combine absolutely, leaving no risk of falling apart in the course of time. The ingredients used in the preparation of this solder are a secret which he retains.—The Metal Worker.

Gasoline Fire Pots and Heaters.

IN all branches of the tinsmithing and plumbing trade there has been substantial progress during recent years. While the prices received for work are now, as a rule, considerably higher than formerly, the cost of materials and the advanced rate of wages paid necessitate a constant keeping down of expenses. To this end, nothing contributes more than the use of the most serviceable and economical tools.

Attention has been called by a correspondent to the merits of gasoline fire pots and torches. It is claimed that by the use of good gasoline torches and pots the plumber can always be sure of a strong, constant heat—essential to good work; that this heat can be started in a moment, preventing any loss of time; often a valuable consideration; and that the cost of the tool heating service can be kept down to the lowest possible basis of cost.

Gasoline pots and torches are now used by many of the shrewdest Canadian plumbers and tinsmiths who speak highly of them. All the trade would do well to conlsider their value.

A. C. Quodd, general merchant, Quodville, has assigned to S. McDougall. Meeting of creditors announced for 25th inst.

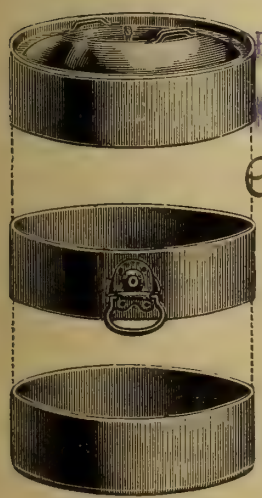
DAVIDSON'S

MILK CAN TRIMMINGS FOR 1904.

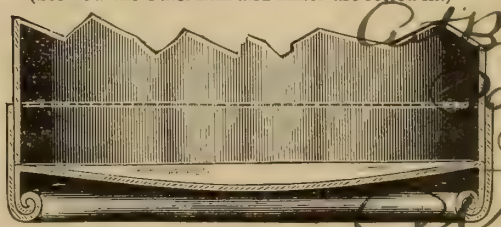


BROAD HOOP PATTERN.

This demonstrates the popularity of

Davidson's Patent Milk Can Bottoms

(See how the Outer Rim and Inner are rolled in.)



SECTION OF BOTTOM.

You should buy our Milk Cans and Trimmings, because: our Broad Hoop Bottom has all the advantages of a seamless bottom without the strain that spinning entails. The rim is turned in with edge of bottom, giving double durability and heavy rolled edges that will not tear factory floors nor waggons.

They have no air spaces (which make soldering difficult) but sufficient space is left between bottom proper and rim to allow body of can to be inserted ¼ of an inch, making permanent joint.

Bottoms are thus sweated in with half the solder.

Bottoms are concave, draining to the centre, therefore are easier to wash out.

They will not corrode like those which drain to the side. They have flush side handles.

Top bands are "SHOULDERED" and have cut out at joint, making neater and cleaner job in half time than with old style hoop.

Bottoms are rivetted to bottom hoop, as well as being rolled together.

All bands have retinned edges.

For durability, finish and economy in making up, our Trimmings are unequalled.

The THOS. DAVIDSON MFG. CO., Limited, MONTREAL

HEATING AND PLUMBING

A PLUMBER'S SYMPATHY.

Editor of "Hardware and Metal."—I read an article in your columns, signed by a retail blacksmith, in reference to the wholesale blacksmith supply houses, sending around to anyone outside of the regular blacksmith business, and selling goods, which rightfully belong to the general blacksmith trade. I can sympathize with the retailer, for althought not in that line, our case is probably worse. I am a plumber in the City of Moncton, and have been in business for over 25 years, and worked up quite a business, but not made any riches, just a good living. And what do we find? but a wholesaleer and retailer firm employing plumbers, and as they can buy from the manufacturers at wholesale or manufacturers' prices, and sell at wholesale and retail, and furnish material to compete in a plumbing job with us, they have a chance to drive us small dealers to the wall. In some cases we know that they sell their goods to the consumer as cheaply as we can buy from the wholesaler, making a small profit on their plumbers, and we in the legitimate plumbing line are simply not in it.

We started a union and thought it was going to do quite a lot for the benefit of the plumber, but we found that it did not amount to much, as the master plumbers meet together once a year to have a good time, and air their views, and listen to a lot of bosh from the representatives of the manufacturers and wholesale houses, and drink a little beer, pass some meaningless resolutions, and then go home thinking everything is O.K., but in about two weeks' time, we find the wholesale manufacturers have repudiated the promises made by their representatives and are continuing in the same old way.

Down in this part of the country we had several wholesale firms selling to the consumer direct, ignoring the claims of the master plumber entirely, and in some cases they go so far as to quote prices, and send circulars to our own workmen. These facts have come before the master plumbers in their session at Halifax in 1902, and also in Montreal in 1903, and probably will continue to do so till the end of time, or until such times as the master plumbers in their conventions mean just what they say (and say just what they mean).

Hoping, Mr. Editor, I have not taken up too much of your valuable space with my grievance, I sign myself

"ONE OF THE CRAFT."

Moncton, N.B., Jan. 13.

A New Gas Light.

One of the new propositions now being extended to the hardware trade is tne new "Morrison Gas Arc Light," which is made by The James Morrison

Brass Mfg. Co., Toronto, who for many years have manufactured one of the most representative lines of gas and electric light fixtures in Canada. The new arc light represents the experience of several years of lamp building, and is put out with strong claims for its efficiency. The greatest volume of light with the smallest consumption of gas and splendid durability are features of the lamp for which the Morrison company make strong claims.

Plumbers at Hockey.

The "Queen City" Hockey League is producing some fast hockey this season. The James Morrison Co. are now at the head of the league, beating The Ontario Lead & Wire Co. last week. Of the remaining games Toronto plumbers are interested in the following:

Jan. 22—Ontario Lead & Wire Co. at Dominion Express.
25—Ontario Lead & Wire Co. at Jas. Morrison Co.
26—Ontario Lead & Wire Co. at Gowans Kent.
30—Jas. Morrison Co. at R. G. McLean.
Feb. 1—Massey-Harris at Jas. Morrison Co.
2—R. G. McLean at Ontario Lead & Wire Co.
4—Massey-Harris at Ontario Lead & Wire Co.
4—Jas. Morrison Co. at Gowans Kent.

Building Permits Issued.

TORONTO.

Joseph A. Genereaux, alterations to dwellings on Vermont avenue, to cost $1,000.

J. H. McKnight, a two-storey detached brick dwelling on First avenue, to cost $1,000.

Wm. Pudifin, two pairs semi-detached two-storey brick dwellings on Dufferin street, to cost $5,600.

L. C. Shepard, three pairs semi-detached dwellings on McPherson avenue, to cost $10,800.

Wm. Pudifin, three pairs of semi-detached two-storey roughcast dwellings on Gladstone avenue, to cost $6,600.

Building Notes.

The Bank of Commerce will erect a new bank building at St. John, N.B.

The Indian Industrial School, at Qu'Appele, Man., recently destroyed by fire, will be rebuilt.

Last year made a record in building operations in Vancouver, permits to the value of $1,353,828 being taken out.

A brisk building season is anticipated at Glace Bay, N.S., where the population has increased from 6,945 to over 10,000 since 1891.

The ninth game of the Queen City Hockey League, Toronto, series was played on January 12 between The James Morrison Brass Mfg. Co. and The Ontario Lead and Wire Co., when the James Morrison company's team won. The score was 7-3.

Keith & Fitzsimons have installed a new lighting plant in the Denison House, Coldwater, Ont., also solar acetylene lighting plants for L. Morris, Bowmanville, and the town hall, Kettleby, Ont. They have completed a new electric light plant for the town hall, Bowmanville.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE Canada Steel Goods Co. Limited, Leamington, Ont., have been incorporated with a capital of $75,000 to acquire the patents, buildings, machinery and good will of the Dominion Steel Whiffle Tree Co., of Leamington. The directors are R. O. Y. Ainslie and W. J. Ainslie, Comber, Ont.; A. F. Hatch, Toronto.

The Arndt Tree Protector, Limited, Toronto, have been incorporated with a capital of $40,000, to take over the Canadian patents for the Arndt Tree Protector and also the plant and machinery for the manufacture of the protector. The directors are G. E. Bradshaw, N. W. Tovell, E. E. Wallace, E. E. Charlton and O. B. Clarke, all of Toronto.

The Ontario Electric Light, Heat and Power Co., Limited, Toronto, have been incorporated with a capital of $40,000, to acquire the Colborne Electric Light and Power plant, and to manufacture all kinds of electric machinery and supplies. The directors are C. J. Walker, E. E. Cooke, E. E. Charlton, O. B. Clark and R. W. Eyre.

The Stevens Company, of Galt Limited, Galt, Ont., have been incorporated with a capital of $20,000, to engage in a general machine and tool manufacturing business and to take over the business now being carried on in Galt under the name of Stevens & Co. The directors are J. J. Stevens, W. A. Rothwell, and E. C. Jones, all of Galt.

The Union Cereal Co., Limited, Toronto, have been incorporated with a capital of $100,000, to manufacture and deal in oats and other grain, and to carry on a general milling, elevating and storing business. The directors are W. A. Strowger, J. B. Hallworth, Harry Green, E. P. Roden, all of Toronto, and W. A. Dowler, Tillsonburg, Ont.

The concentrating and cyaniding plant of the Gooderham-Blackstock mining syndicate on the Columbia River, B.C., will soon be in operation. It is the largest plant of its kind in Canada and one of the most up-to-date in the world. The mill is intended for the treatment of low grade ores, and the output will be 400 tons per day.

There can be but little doubt but that the supply of hardwood suitable for manufacturing purposes is becoming very low. It is said that the International Harvester Co., of Hamilton, the Massey-Harris Co., and Frost & Wood have all requested the Bureau of Forestry for information concerning the amount of hardwood in Ontario now.

W. H. Aldrich, Trail, B.C., chief of the mining and metallurgical department of the C.P.R., is reported to have stated that mining conditions in the west had improved very materially during the last few months. He says that considerable progress has been made by the C.P.R. in the opening up of the semi-anthracite coal mine at Banff, B.C. There are millions of tons of coal in sight, but at the outset the mine will be worked to produce only from 15,000 to 20,000 tons per month.

A meeting of the Winnipeg Wholesale Implement and Carriage Association was held in Winnipeg recently and the following officers were elected for the year 1904: W. H. Hutchinson, President; Jos. Maw, First Vice-President; A. E. Mott, Second Vice-President; A. G. Watson, Secretary-Treasurer; Executive Committee, L. Hartshorne, L. C. Kaslett, A. C. McRae, G. W. Erb, R. S. Agur, A. N. Stewart. The reports of the association showed that the implement trade had grown considerably during the past year.

NOTES.

The new saw mill at Clarendon, B.C., is about to commence operations.

The Brandon Woollen Mills Co., Brandon, Man., have been incorporated with a capital of $60,000

The Northwest Machinery and Iron Co., Limited, Winnipeg, have been incorporated with a capital of $40,000.

It is reported that the Dominion Iron and Steel Co. are about to close negotiations for the sale of extensive iron pyrites at Roswell Bay, Nova Scotia, to an American company.

A despatch from Ottawa says that a large tannery is to be established just on the outskirts of the city. J. Laing, of Berlin, is the chief mover in connection with the enterprise.

The new galvanizing plant of the Page-Hersey Iron and Tube Mills is now in ful operation, and it is expected that the venture of this company into the galvanizing industry will be successful.

The Robertson Varnish Co., Limited, Toronto, have been incorporated with a capital of $25,000, to manufacture and deal in varnishes, paints, oils and glass. The directors are A. A. McMichael, H. S. Hawood, and G. F. Clare, all of Toronto.

The McLean Lumber Co., Limited, Windsor, Ont., have been incorporated with a capital of $40,000, to manufacture and sell all kinds of lumber The directors are A. N. McLean, W. T. Carter, Windsor; and W. J. Pulling, Sandwich, Ont.

S. J. Major, Limited, Ottawa, have been incorporated with a capital of $200,000, to carry on a general wholesale and retail grocery and liquor business. The directors are A. Major, H. Major, Geo. LeBel, J. Cote and Emile Major.

The Dr. Unger Medicine Co., Limited, Toronto, have been incorporated with a capital of $60,000, to manufacture and deal in patent medicines. The directors are A. A. Granger, E. M. Granger, F. N. Reesor, and R. J. Reesor, all of Toronto.

The Lindsay Portland Cement Co., Limited, Lindsay, Ont., have been incorporated with a capital of $500,000, to manufacture and sell cement. The directors are J. D. Flavelle, T. Sadler, R. Sylvester, and J. B. Knowlson, all of Lindsay.

The Tait Carss Lumber Co., Limited, Orillia, Ont., have been incorporated with a capital of $40,000 to manufacture and sell lumber, laths and shingles, and to deal in fuel and ice. The directors are A. Tait, S. E. Carss and C. C. Carss, all of Orillia.

The Fenelon Falls Milling Co., Limited, Fenelon Falls, Ont., have been incorporated with a capital of $20,000, to acquire the business now being carried on in Fenelon Falls under the name of Francis Sanford. The directors are F. Sanford, H. Puley, G. J. Nie, all of Fenelon Falls.

The Convertible Car Co., Limited, Toronto, have been incorporated with a capital of $75,000, to manufacture and deal in convertible railway and other cars. The directors are R. G. Dickson.

C. A. Johnston, P. H. Drayton, H. M. Johnston and R. M. Fahey, all of Toronto.

Within the next two months it is reported that the Roche Percee coal mines, Assinaboia, will be opened up. It is claimed to be one of the richest coal mines in the Dominion, and if everything works well it is very likely that industries will be established in the vicinity of the mine.

FORMING JOINT STOCK COMPANY.

Mr. Walter Grose returned to Montreal last week after a two weeks' business trip to the headquarters of the Ontario Lantern Company at Hamilton, Ontario. Mr. Grose informs us that he has bought the quarter interest in the firm formerly held by Mr. E. Schultz. It is the intention now to organize the business as a joint stock company with a capital of $100,000 under the name of the Ontario Lantern and Lamp Company. The firm are bringing in a practical expert from the United States who, as superintendent, will take charge of the works. They intend adding several new lines of lanterns and lamps and will increase their plant very considerably.

NEW MANAGER H. R. IVES & CO.

J. M. Henderson, who has been connected with the firm of H. R. Ives & Co. for a great number of years, has been appointed first vice-president and general manager of this concern in place of the late Samuel Coulson, mention of whose untimely death was made in our issue of January 9. Mr. Henderson is a thoroughly trained hardware man, and it is a tribute to his ability and perseverance that he should get this important appointment. Like several other business men of Montreal who have come to the front, Mr. Henderson was trained in the old hardware firm of Mulholland & Baker, a firm who have turned out such men as George Chillas, president of The Gorham Co., and W. H. Evans, of The Canada Paint Co. From this firm Mr. Henderson passed to Morland, Watson & Co., and from thence to the firm with which he is now connected.

In addition to being a faithful business official, Mr. Henderson is also very popular in Masonic and social circles in Montreal, and he is equally at home in weilding the gavel, proposing the health of the King, or responding to the toast of "The Ladies." "Hardware and Metal" offers its sincere congratulations to Mr. Henderson on his well-deserved promotion.

THE ONE THING IN THE WAY.

A MAN who is a great stickler for classification and form, was promoted to the position of manager of a hardware jobbing house. He had long had his ideas as to how travelling salesmen should be handled, and now he determined to put them into practice. But first, he would give the men a chance to state their woes, so that he could tell them how to correct them.

So he prepared an ornate circular letter which he sent to each one of them. And the central thought of this letter lay in this question: "What is the chief difficulty that you run against on the road?"

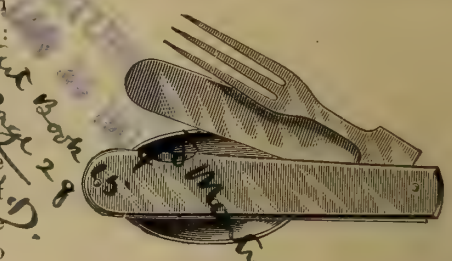
The answers were all back in about a week. They were direct and terse. In every case the response was in two words: "The buyer."

THE BUYERS' GUIDE.

The Manufacturers' List Co., have issued their "Manufacturers' Product List," a publication which they state entailed an expenditure of $10,000 to produce. In a reference to it the publishers give the following information: "It contains a list of over 12,000 manufacturers' addresses and the character of their business—9,000 more than any other publication of its kind in Canada. No progressive manufacturer has been left out that would furnish us a list of his products. The smallest as well as the largest producer is indexed free of charge. The advertiser in the book only has the advantage of his advertisement over those who do not advertise. This is all important to the buyer." Readers of this paper desiring to secure a copy of the book are requested to notify the Editor, "Hardware and Metal."

PATENT PICNIC KNIFE.

THE illustration shows a little novelty in English cutlery which should be of interest to hardware dealers who aim to supply the wants of picnic parties. This "patent picnic knife" contains in small compass a handsome and serviceable picnic outfit, comprising a knife, fork, and spoon. The fork or spoon can easily be detached by opening half way and sliding the side of the handle downwards. The length when open is seven inches and when shut



it is probably half that length. It is manufactured from the best nickel silver and fine cast steel, at a cost not exceeding that of a reliable two-bladed pocket knife. Prices vary of course with the quality of the handles which are supplied in nickel, aluminum, wood, bone, black buffalo, ivory and silver. The knife is manufactured by Singleton & Priestman, of Pond Hill Sheffield. Mr. James Grant, of 810 Palace street, Montreal, is now representing this firm in Canada and further information may be obtained by addressing him.

A Word of Thanks to Our Customers.

The past year's business has been very satisfactory to us, and we are exceedingly obliged to you in consequence.

We have done our best to please you at all times, and where we failed it was our misfortune, not our fault.

Prospects are bright for another prosperous year, and we hope to continue our pleasant business relations with you.

U. M. C. NEW PRODUCTS.

The .32 Automatic Colt Pistol Cartridge is loaded with a special high power smokeless powder, giving high velocity and operating freely through the mechanism of the Automatic Colt Pistol (pocket model). Those with the soft point bullet will be found desirable for sporting purposes, and those with metal case for military and target use.

RIM FIRE CARTRIDGES

The U. M. C. .22 automatic rifle (Winchester model 1903) cartridge is now ready for the market. New .22 short ungreased, 22 long ungreased, and .22 Winchester inside lubricated are inexpensive rim fire cartridges loaded with the best grade of smokeless powder. Boys are calling for these cartridges, as they can be carried loose in the pocket without the old inconvenience of the greased cartridge. They will not lead the gun. "U. M. C. Ammunition shoots well in any gun."

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WHY sell Old Style Cork Screws?

The People Want

WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

"THE REAL" SAFETY RAZOR IS A SELLER

OUR CONDITIONS ARE : Give to likely customers to try and if not absolutely satisfactory return it.

AGENTS FOR CANADA:

RICE LEWIS & SON, Limited, Toronto.
CAVERHILL, LEARMONT & CO., Montreal.

A New Kind of Razor

You'll be surprised at the way "The Real" Safety Razor shaves—*different* from any other razor.

It shaves clean and keen—smooth and easy.

It doesn't pull or break hairs.

"The Real" is the only perfect razor for *self-shaving.*

The *rigid handle* and the *anti-cut guard* make it better than the ordinary razor—*better control of the blade* on *face, strop* or *hone*—*quicker work* possible—*no cutting.*

It's better than other "safety razors" because it's a *razor*—not a hoe. Made of the *very finest* razor steel—*full concave*—2¼ in. blade.

GEO. W. KORN RAZOR MFG. CO., Little Valley, N.Y., U.S.A.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

MacLEAN PUBLISHING CO., Limited

Blue Ribbon is no doubt the Queen of Binder Twine. It runs six hundred and fifty feet to the pound, and is manufactured from most select Manila Fibre. Six hundred and fifty foot Twine is the only Twine manufactured entirely from Manila Fibre. Dealers should beware of so-called "Manila" Twines which are advertised to measure less than 650 feet to the pound. They are mixed Twines.

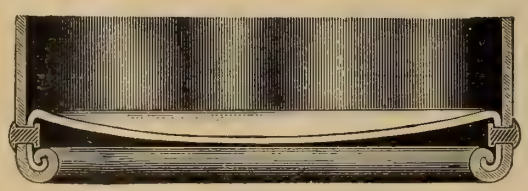
KEMP'S BROAD HOOP ROLL RIM BOTTOM MILK CAN TRIMMINGS



A criticising public have used them for the past five years and the increasing demand is proof of their superiority, also evidence of the satisfaction which they give.

The Roll Rim Bottom having no sharp turns does not break the grain of the metal or lessen its wearing qualities.

Narrow Top Hoops can be supplied in place of Broad Top Hoops if desired.

For Strength, Durability and Finish our Trimmings are unexcelled.

They cost no more than inferior qualities.

We also carry in stock a full line of **First Quality Tinned Iron,** cut suitable for the different size of Trimmings, which we will supply at the lowest current market quotations.

KEMP MANUFACTURING CO., TORONTO, CANADA.

Business Men in International Affairs.

A FEW Canadians have had the privilege of listening, in the last few days to a very distinguished advocate of international arbitration, and the application of the business man's common sense to questions of high political import, in the person of Dr. Thomas Barclay, of Paris, who on Friday last addressed a meeting in Montreal and who was on Monday a guest at the Canadian Club, Toronto. Dr. Barclay came to America a few weeks ago as a member of the Mosely Eudcational Commission and has remained here devoting considerable energy throughout the Eastern States to the advocacy of a treaty of arbitration between Great Britain and the United States. He has addressed himself particularly to the business classes, convinced that they are ready for such action and are amply able to bring about such a treaty if they once assert their power.

Dr. Barclay has every reason for the faith he puts in the business classes. Dr. Barclay, it should be explained, is a Scotchman, who was educated in the Universities of London, Paris, Bonn and Jena, went to Paris in 1876 as a correspondent of the Times, but since 1882 has devoted himself to the practice of law in Paris. He is a member of the Institute of Intenational Law, vice-president of the International Law Association, and has held many other positions of honor, among them president 1899-1900 of the Britsh Chamber of Commerce in Paris. It was during the occupancy of this office that Dr. Barclay was able to demonstrate what business men could do to pour oil on the troubled waters of international jealousy and misunderstanding and to bring about a reconciliation that augers well for the future peace of Europe.

A representative of "The Canadian Grocer" met Dr. Barclay at the conclusion of his address at the Canadian Club, with a view of learning the part taken by the business communities of France and England in the matter of the Anglo-French treaty of 1903.

Nothing, in the opinion of the distinguished visitor, is more striking in the history of peace than the way in which business men have of late come into the arbitration movement. It is not many years since business men sneered at arbitration as the dream of millennium mongers, cranks, faddists and other people whom practical men are in the habit of steering clear of as long-winded time-wasters.

It is my belief, continued Dr. Barclay, that the change which has come over our business world in its attitude towards arbitration is due to the impending conflicts which were avoided, and thus conflict can, in fact, occasionally claim the function of a power for good.

The one instance I refer to was the Venezuela question in which President Cleveland "put his foot down." The other case was the Fashoda question in which the British Government "put its foot down." In both cases an armed conflict would have been the result if it had

Dr. Thomas Barclay, of Paris.

not been for the real patriotism of the governments which yielded and the certainty that the business world of both countries would have disapproved of fighting for unessential things. If there is anything that distinguishes business methods from other methods, whatever they may be, it is that the business man tries in his mind to reduce every question to its just proportions. The business man has what very often is lacking to the politician, the right sense of proportion. Thus it seems naturally monstrous to the business man to employ a sledgehammer for the execution of a fly, but that sort of consideration does not always appeal to those who are not trained in the world of commerce and industry.

No better instance of the way in which business men can do good by putting their foot down was ever seen than when the Association of the Chambers of Commerce of the United Kingdom took the relations between Great Britain and France into their hands in 1900. At that moment the hostile feeling between the two countries, so far as the press appeared to echo it, was so strong that on the slightest provocation the guns would have gone off, by themselves.

At the danger of being charged with egotism, I must refer here to my own agency in the change of feeling which began at that time. I had the privilege of being at that moment chairman of the Britsh Chamber of Commerce in Paris, and in that capacity was able to take a public attitude towards the subject of Anglo-French relations which I could not otherwise have assumed. I believe that the assistance which was given to me by Mr. W. L. Courtney, the editor of the Fortnightly Review, in that great periodical, at the same period was the beginning of a more reasonable attitude in Great Britain towards France, and that my article in the Fortnightly to some extent influenced the Association of the Chambers of Commerce of the United Kingdom in accepting my proposal to entertain them, as president of the Britsh Chamber of Commerce in Paris, if they would come over and hold their Autumn meeting there, and show the French that the Britsh nation—a nation of shopkeepers, and we are not ashamed of it—entertained none of those antipathetic feelings towards the French with which a too bellicose press seemed to credit the Britsh nation. I pointed out the danger of doing nothing, of standing by and letting a small minority drag the two nations into a conflict. In spite of warnings, dissuasion and poohpoohings by the stormbirds of Pall Mall and Fleet street, I got a unanimous response, and the meeting that was held in the Autumn of the same year was the largest meeting of the Association of Chambers of Commerce ever held, and the reception given by the French to them showed that they appreciated the full force and importance of this unwonted and spontaneous action of the representatives of the business world of the United Kingdom. Every French Minister of State, even the President of the Republic himself, gave me practi-

cally carte blanche to draw up the scheme of their entertainment, and those who came over from Great Britain—there were 800 of them—went home to tell their fellow-citizens in every part of the kingdom that the French and the British peoples meant to be friends, and that so far as seeing any manifestations of hostility towards them in France, they had received nothing but the warmest and kindest expressions of sympathy in spite of the Boer War then raging, about which every English newspaper was daily culling irritating comments by the French press.

That was how the business men of Great Britain started the movement which has since been so successful. When six months later I proposed a treaty of arbitration to stimulate and consolidate the better feeling, I knew the response I should get from the business men of both countries.

All the chambers of commerce of the United Kingdom now pledged themselves to arbitration. All the chambers of commerce of France did the same. These chambers of commerce not only pledged themselves, they used their necessarily practical influence in enlisting in this cause municipal councils and trade unions, thus bringing into the movement employers and employed, capital and labor, and above all, the moving political forces which produce a more direct influence on the opinion of a nation's representatives in Parliament. This combined influence in both countries was so overwhelming that the British and French Governments could not for one moment hesitate to take action when the time came. They took action in direct response to the work I have described. This was done on the 11th of May, after a question had been put in the House of Commons by my friend, Mr. Ernest Beckett, which elicited so friendly a response from the Prime Minister that the following day the French Ambassador called on Lord Lansdowne and asked him if he was prepared to enter into negotiations.

That question was as follows: "Has the Prime Minister given consideration to the numerous resolutions which have been passed by the chambers of commerce in favor of a treaty of arbitration and conciliation between Great Britain and France?" Mr. Balfour replied that he had noted with much interest and sympathy these resolutions.

It is thus seen that it was the direct action of chambers of commerce which brought the two Governments into contact, and thereby was done what the peace conference was unable to do, what the Czar, with all his influence, fell short of doing, what enthusiasts and idealists (God bless them!) have been trying to do for a hundred years or more, and what might never have been done at all had not the practical business men of the two countries insisted upon doing it. That is what business men can do when they put their shoulders to the wheel, and I have shown how they can do it.

Dr. Barclay is enthusiastic and convincing in his advocacy of an Anglo-American treaty along similar lines, and is convinced that if the business men step into the arena of competition for the consolidation, once and for all, of the peace of the world, they will do the work begun on the other side of the Atlantic with all the magnificent speed and effectiveness with which they do everything they undertake on this side.

A FISHING CALENDAR

Connors Bros., packers of sea foods, Black's Harbor, are distributing one of the most interesting calendars that has come to hand this year. The hanger is dark red while upon a white space in the centre is a splendid reproduction of a number of fishing scenes. "Once a fisherman always a fisherman" is the text. At one corner is a line drawing of the angler, at seven and diagonally oppcsite his elder brother of seventy, while in the remaining spaces are a couple of capital fishing scenes from photographic views. Readers of "Hardware and Metal" should write for this calendar. It is worth having.

U. S. COPPER PRODUCTION.

The production of copper in the United States during 1903 is estimated by Mr. Horace J. Stevens at 714,250,000 pounds, an apparent increase over the output of 1902 of 54,529,991 pounds, equivalent to 8¼ per cent., says The Metal Market.

The following table shows the production of the various states and districts for the two years:

State—	1902.	1903.
Montana	288,903,820	260,000,000
Michigan	170,820 593	199,650,000
Arizona	119,944,944	150,000,000
California	25,038,724	28,000,000
Utah	23,939,901	37,000,000
East and South	13,599,047	10,000,000
Colorado	8 422,030	8,000,000
New Mexico	6,614,961	8,000,000
Wyoming	889.228	2,000,000
South Dakota	445,663	700,000
Idaho	227,500	300,000
Washington	209,297	300,000
Nevada	164,301	300,000
Miscellaneous	500,000	1.000,000
Total	659,720,009	714 250,000

CATALOGUES, BOOKLETS, ETC.

HARDWARE AND METAL would be pleased to review catalogues, booklets or other such publications issued by manufcturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. No charge will be made for these services.

"STEVENS-DURYEA."

The J. Stevens Arms & Tool Co., Chicopee Falls, Mass., have issued a booklet giving the necessary information for an understanding of the various parts of a "Stevens-Duryea" gasolene carriage, also about the proper care and maintenance and economical running of this machine. The booklet will be sent to anyone interested on request.

SMALL SPRINGS.

Any reader of "Hardware and Metal" interested in small springs of any decription and not now in possession of the booklet issued by The Wallace Barnes Co., Bristol, Conn., who have for nearly fifty years been engaged in the production of springs and specialties, and who are now widely reputed for their cold-rolled spring steel from .003 to .250 in thickness, as well as for a line of the cheaper grades of steel, and for steel, brass, phosphor bronze and music spring wire and flattened wire, both tempered and untempered.

A DESK CALENDAR PAD.

The Taylor-Forbes Co., Guelph, Ont., have issued a calendar desk pad which should be appreciated by busy men. Each leaf of the pad is divided into seven spaces for references to engagements for the week. Such a pad should be of great service, should help to develop system and regularity. These will be sent to readers of "Hardware and Metal" on application.

THE THOS. DAVIDSON MFG. CO..

These catalogues issued by The Thos. Davidson Mfg. Co., Montreal, are always clean and attractive, and this year's production is fully up to their high standard. The illustrations of their enamelled ware are all half-tone engravings of unusually high quality.

The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

Included in the lines mentioned in its 300 pages are enamelled ware, stamped ware and tinware of all kinds. This firm are too well recognized throughout Canada to need more detailed reference to their lines, which are known in every section of the Dominion. No progressive hardwaremen can well afford to be without this book,—a standard work of reference in its line. Write for a copy at once if you have not already received one.

PUMPING MACHINERY.

Rumsey & Co., 35 Dey street, New York, are widely known as manufacturers of hydraulic and pumping machinery for all purposes. Their catalogue is consequently an authority on pumps, etc., as one might judge from the excellence of the illustrations, the heavy cloth binding and other elements of stability in the work. Readers of this paper can secure a copy on request.

BICYCLE ACCESSORIES.

In a few weeks the bicycling season will be well opened, and the hardware trade will be called upon for much repair work. The Canada Cycle & Motor Co., Toronto Junction, Ont., have gotten up a most comprehensive work on bicycle accessories. In this reference is made, in addition to the saddles, handle bars, grips, chains, pedals, spokes and nipples, etc., made by themselves, to the gregt variety of specialties for which they are acting as Canadian agents. No prices are given in this catalogue, it being for general circulation. Hardware dealers desiring a supply of these catalogues for distribution to probable customers and also a trade price list should write for same to the head office, The Canada Cycle & Motor Co., Toronto Junction, Ont.

THE WIRE GOODS CO.

From The Wire Goods Co., of Worcester, Mass., "Hardware and Metal" has received a copy of their export catalogue, which describes a selection of goods from their general line which they consider especially adapted to the export trade. This selection includes a number of useful novelties in wire goods which should be of interest to the hardware trade. This company make a specialty of cases of saleable goods. A sample case of saleable goods (No.10), referred to in this catalogue, contains 1,158 pieces, for which their price is $10, and which they claim should retail for $39.81. A summary of the articles included in this case is given in the catalogue, and, as any hardware man can see who takes the trouble to examine the list, they are useful articles which should meet with a ready sale. This catalogue will be mailed free of cost to any of our readers who write for it. The Wire Goods Co. have also issued their catalogue No. 5, which contains 182 pages. It is devoted to general wire hardware and gives a description of upward of 3,200 different articles. To any of our readers who are interested The Wire Goods Co. will send a copy upon receipt of 50c. to cover transportation charges. The other catalogue will be sent free. Write for it.

A Good Paint that Brings a Good Profit

THE SHERWIN-WILLIAMS FAMILY PAINT should be on the shelves of every progressive dealer.

There is a demand for just such a paint from nearly every household in the Dominion. It's a handy paint for cleanly homes.

Family Paint is for use in the house—to brighten up the little things here and there. For door and window trimmings, shelves, boxes, rough furniture, flower boxes, etc. there is nothing better.

It's easily applied and stands plenty of soap and water. It wears well and dries quickly with a bright gloss.

Comes ready for use in half pint, pint, and quart cans in 26 colors at a price that's right.

It's a spring house cleaning necessity. Stock up now for spring demand. Send for prices and our plans for advertising this specialty today.

THE CANADA METAL CO.

Hardware dealers who handle solders babbits, etc., might make good use of blotters sent out by The Canada Metal Co., Toronto. These blotters contain illustrations of lead wire, solder bars, stereotype metals, etc., and might be distributed to users of these lines by hardwaremen carrying this firm's lines.

CLING SURFACE.

The Cling-Surface Mfg. Co., Buffalo, N.Y., have issued a small leaflet containing 15 references to the practical value of "Cling-Surface" by leading Canadian manufacturers, all of whom speak very highly of it. These notes should be of interest to many hardware retailers who handle "Cling-Surface" for use in helping to convince manufacturers of its value.

THE JAMES MORRISON BRASS MFG. CO.'S CALENDARS.

"Hardware and Metal" takes much pleasure in mentioning a set of three exceptionally handsome calendars gotten out by The James Morrison Brass Mfg Co., Toronto. One is a veritable work of art, being in the form of an elaborate embossed picture of Cleopatra. The others are colored lithographs with child and animal subjects, and are equally attractive.

Business Changes

ONTARIO.

THE assets of the Wakefield Mica Company, Ottawa, are advertised to be sold May 17.

The Walkerville Wagon Co., Walkerville, are moving to West Lorne.

Thompson & Lorimer, general merchants, Freeman, have been burned out.

J. Graydon, dealer in sawmill and builders' supplies, Streetsville, is dead.

James Swift & Co., coal dealers and forwarders, Kingston, have dissolved partnership.

D. E. Friskin, blacksmith and carriage maker, Napanee, has advertised his business for sale.

J. E. Hoffmann, wagon maker and proprietor of planing mill, Dashwood, has assigned to J. Snell.

The grain warehouse of W. Kerns & Co., general and grain merchants, Burlington, has been destroyed by fire.

The assets of the Hamilton Motor Works, manufacturers of gasoline engines, etc., Hamilton, are advertised for sale by tender by assignee.

The premises of T. C. McGuire & Son, harness maker, and of W. J. Muirhead, hardware merchants, respectively, both of Carleton Place, have been damaged by fire.

The Leishman & Maundrell Co., of Woodstock, lumber, coal and wood dealers, Woodstock, have changed the style of their firm name to the Woodstock Lumber and Manufacturing Co.

QUEBEC.

Guenette Freres, dealers in hardware, paints, etc., Montreal, have registered.

The assets of J. A. D. Annett, general merchant, Gaspe Basin, have been sold.

J. R. Dube, general merchant, Becancour, has assigned to Lamarche & Benoit

J. Dupault, general merchant, Valcourt, has assigned to Chartrand & Turgeon.

The assets of J. O. Lemire & Co., general merchants, St. Guillaume D'Upton, have been sold.

The assets of N. H. Turcotte, general merchant, St. Eulalie, were advertised to be sold 27th inst.

MACHINERY

The Machinery Market.

TORONTO.

THERE are no very important features on the machinery market this week. On the whole the demand for all lines of machinery holds steady at last week's report. There are, however, a few exceptions to be noted. There has not been the number of orders for sawmill outfits, shingle-mill machinery and wood-working machinery in general, placed this week that there were during last week or the week before. There has, however, been a slight picking up in the electrical machinery line and altogether there is a brighter outlook for this class of machinery this week than there has been so far this month. The number of orders booked has been larger, and more enquiries have been received than during any previous week this year. The demand for engines, boilers, shafting and belting continues very good, and is quite up to that of last week. Machine tools and iron working machinery in general hold firm, the ordinary amount of business being done in those lines. The demand for gas and gasoline engines has been fairly good, but nothing remarkable. The market for motor vehicles and like machinery has been steady, with no important features. On the whole this week has only been a fairly good one for machinery men. Perhaps enquiries have been more frequent than during the previous week, but the actual amount of business done has been less.

The A. R. Williams Machinery Co. report the market in much the same condition as last week. They find the demand for wood-working machinery fairly good, the demand for iron-working machinery steady and the demand for engines and boilers good, being quite as good as it has been during the past two weeks. Otherwise this has been rather an uneventful week in the machinery market.

The Levy, Weston and McLean Machinery Co. have no important feature of the market to note this week. The demand for engines and boilers continues to be good, and this is the only line in which there has been anything but the very ordinary business done. The orders for saw-mill, shingle-mill and planing-mill machinery have fallen off this week, and only a fair amount of business has been done in these lines. There has been a fair demand for machine tools and like machinery. They have noticed a larger number of enquiries coming in during this week than during the week previous, but other than that the market has been rather featureless.

The Jones & Moore Electric Co. report a slightly brighter market this week for dynamos, motors and generators. This brightness consists both in a slight increase in the actual business transacted, and also in an increase in the number of enquiries received. It is hoped that this may start the ball a-rolling, and that it is significant of a busy market during the weeks to follow.

The last Ontario Gazette contains a notice of the granting of a license by the Ontario Government to the Fairbanks Company to carry on their business in Ontario. They have been given the right to manufacture and deal in scales and all kinds of weighing instruments and to manufacture and deal in all kinds of machinery, machine tools and implements. The capital to be used by the company is limited to $100,000.

The Consolidated Electric Co. report a continual good demand for their electrical machinery, especially for medium sized motors and for generators for small electric lighting systems. They report that they are still trying to catch up on booked orders.

The Dominion Motor Machine Co. report the market for motor machines steady this week, with no special features. There has not been so many enquiries for gasoline or gas engines this week as the two previous weeks, but business done in that line his been fair

---

MONTREAL.

Conditions in the Montreal machinery markets show a considerable improvement this week as compared with last. In several lines the inquiries noted for several weeks past are now beginning to show substantial results and some good orders have been booked during the latter part of last week and the early part of this. This is particularly true of saw-mill machinery, in which there has been considerable activity. The principal drawback has been the very deep snow in the lumbering districts which has hindered operations very much. Nevertheless business in this class of machinery is now quite satisfactory and a big improvement is expected during the next month. There has been a good number of actual sales this week and several inquiries for instant delivery are reported by diffrent houses.

The market for iron-working machinery and particularly machine shop tools is by no means so active as might be desired or expected. A number of buyers seem to be holding off in the expectation of a drop in prices. There are a number of concerns, large and small, which are certain to be in the market for machine shop tools before long. For example, both the Canadian Pacific and Grand Trunk railways have built extensive shops which they have as yet scarcely commenced to equip with tools. They must buy very soon. Various other smaller concerns whose orders in the aggregate will amount to large sums are in the same position. It is evident that some good business may be expected very soon. But a number of large buyers have been delaying to place their orders in the hope that prices will be reduced. This hope has been due entirely to alarmist reports from the United States machinery and metal markets and has not been in any case due to the conditions prevailing in Canada. Canadian manufacturers are not disposed to make any concessions as they consider business prospects here quite satisfactory and during the past year many of them have had more orders than they could conveniently fill. Buyers have hoped, however, for a break in prices because of the "dumping" of American machinery on our markets.

For this " dumping " process they have waited in vain and it seems probable that if they continue to wait their waiting will still be in vain. It is quite true that an unusual number of American machinery travellers have been in Canada during the last two or three months but price concessions of a startling nature are yet to be heard of. Their presence here has unsettled the market although they have really done little or nothing in the way of price cutting to disturb local conditions. Meanwhile a continued improvement has been noticed in the New York machinery markets and good judges of the situation think there is now nothing to be feared from American competition.

A feature of the week's business has been an improved demand for gas and gasoline engines. Actual business in these engines has been satisfactory and as in so many other lines of machinery there have been a number of inquiries.

In heavy engines and large boilers there has been little if any actual business this week. Some inquiries calling for immediate delivery have been reported, but local makers have been unable to fill them. Buyers should remember that Canadian makers were very busy all through 1903 and their capacities wer taxed to the utmost. Small engines are usually carried in stock, but large engines have to be made to order in almost all cases.

W. H. Nolan, of the Canadian Machinery Agency, reports that the inquiries received during the last six weeks are now commencing to bring results. During the latter part of last week and fortnight he has made several good sales have been made of wood-working machinery, engines and boilers. Mr. Nolan considers that trade has opened up very satisfactorily for January and he is looking forward confidently to a good year's business. Inquiries continue to come in and these coupled with the satisfactory volume of actual business are the basis for his confidence. He finds that buyers who, a month ago, were disposed to hold off for lower prices are now on the market and likely to place their orders very shortly.

E. Leonard & Sons report that the season's trade is opening up nicely. Manager H. Plant says that he has no reason to complain. During the last fortnight he has made several goor sales and he thinks that prospects are good for a prosperous season. These sales have been principally of engines and boilers although some small sales of mining machinery have also been made.

Williams & Wilson say that business is showing an improvement this week as compared with last. Nevertheless retail business is still on the quiet side and is not quite as large as they had hoped for. Inquiries continue to come in for engines, boilers, and wood-working machinery and a number of good sales seem on the point of being closed.

The Laurie Engine Company report actual business this week in large engines and boilers as being very light. They have work on hand in these lines which will keep them busily employed until the middle of the Summer. Consequently they have been obliged to refuse some orders which called for instant delivery. Some good business has been done in iron and wood-working machinery, particularly the latter, as buyers of the former still seem disposed to hold off. Some mining machinery has been sold recently and further sales are looked for very soon. In saw-mill outfits there is still a gratifying activity and increased business may be looked for next month.

The Fairbanks Company report some improvements this week in conditions as compared with last. Actual business is now on the increase as the inquiries noted for weeks back are now showing results. In machine tools some good sales seem likely very soon, although buyers are still holding off. The Fairbanks Company find that their gas and gasoline engines are meeting with a fair demand.

Alfred Rubra, of the Machinery Exchange, reports some business this week in saw-mill outfits and a number of inquiries for same, two of which are from the Gaspe Peninsula. In machine tools he finds actual business light although prospective buyers are still making inquiries. Two large buyers have been holding off for a couple of months in the hope of lower prices, but Canadian manufacturers are not making any concessions and unless some unexpected competition comes from the United States prices are bound to be firmly maintained. The Canadian machinery market is now very firm.

NEW YORK.

The American Machinist says that taking things all in all the feeling in the machinery trade at the present time is more satisfactory than could be recorded a few weeks ago. There are some sources of trade which have been quite barren for several months past, but which are slowly but surely beginning to look more promising. One of these is the cement industry. Inquiries are beginning to come in a little more frequently, and are said to be largely made up of those which hold out excellent hopes for resulting business.

CHICAGO.

Generally speaking, says the American Machinist, the demand for machinists' supplies is more active than that for machine tools, especially those which go principally to large and modern shops. The large machinists' supply houses in the city are unanimous in saying that the trade for January has been satisfactory, and when compared with January of last year shows little or no loss. It is a fair statement of the situation to say that shop activities are normal, but that there is a hesitation in the placing of contracts for future requirements, due principally to the unsettled state of values.

Machinery Trade in England.

MATHESON & GRANT, London, Eng., in their Engineering Trades Report for January have the following to say of the machinery situation:

Machine tool makers are only moderately employed; but, while they have to share in the vicissitudes of the engineering trades, they have, on the other hand, the advantage of supplying—according to their skill—the improved designs and new tools which dull times and keen competition call for. The extraordinary cutting power of high-speed self-hardening tool steel can only be utilized in machines of corresponding strength. Instead, therefore, of classifying tools, as formerly, by the size of article they can deal with, it is becoming usual to rate them according to the weight of iron or steel they can remove in a given time. This condition applies mainly to planers, milling machines and lathes, while in drilling machines the strength of the feed-gear and other parts to resist the thrust of high-speed tools is of special importance. The power demanded from hydraulic machines for pressing or manipulating steel ingots, plates and forgings is still increasing.

Electrical Machinery in its design and manufacture is fully established as a separate and most important branch of mechanical engineering. This country can now compete successfully with those

in Germany and America, who at an earlier date than England had free scope for their inventions; but there are here fewer opportunities for utilising water power than are presented to the engineers of Italy and Switzerland Owing to its greater flexibility and convenience for power distribution, the electric current affords now a substitute for hydraulic mains. In England and on the Continent, at railway goods stations and wharves, where capstans and cranes have for the last 30 years been operated from a central accumulator as the only available method, electricity is being substituted or added with advantage. In America, although hydraulic distribution is as common at all steel works as it is in Europe, the railway goods stations have only in few cases been fitted with hydraulic power mains, and therefore electricity will have a freer field. Experience in the driving of machines, tools and cranes by electric motors is showing, among other results, where direct connection by toothed wheels is effective, and where belt driving is preferable. Familiarity with the use and advantage of electric motors in paving the way for the central power companies who have acquired statutory rights in Yorkshire and elsewhere for distributing current for sale.

Locomotives and Rolling Stock—The leading makers who are well employed on important contracts still in hand, Jo not yet see where sufficient orders are to come from as the year advances. The diminished traffic returns of the home railways, have as is usual in such cases restricted purchases, and on some of the lines to such an extent as will probably cause a too hurried demand when trade revives. The Scotch locomotive firms who have endeavored to check excessive competition by amalgamating their interests, are at present occupied on engines for India, Japan, South Africa and Canada as well as for home railways. When low first cost, rather than durability and economical working is of chief importance, locomotives of equal hauling force to those made in this country may be obtained more cheaply abroad. But such a condition seldom obtains in Great Britain or India, and past experience with American engines in the colonies and South America does not encourage repetition. Wagon and carriage builders are not fully occupied, though the combination of the leading firms has tended to uphold prices. It is probable that extensive works may soon be established in India by some of the English firms so as to utilise native labor for, at any rate, the lighter structural parts and fittings.

Vibration of Electric Pump.

RESIDENTS of Montreal residing on McTavish street and immediate vicinity have been much annoyed by the vibrations of an electric pump recently installed to pump water to the reservoirs on the mountain. They applied for an injunction to restrain the city from using this pump on the ground that it was a public nuisance and was depriving the citizens of the neighborhood of their sleep.

The water department have hastened to explain that they were not to blame and in proof of their contention Mr. Janin has produced a letter from the contractors written May 6th, 1902, when they submitted their tenders. The contractors explained that as the ground at McTavish street station is "made up" it is peculiarly liable to vibration. Hence they warned the water department that particular care should be exercised in selecting proper pumping machinery. They had themselves noticed quite a heavy vibration when testing some boilers and running a pumping engine at that station at fast speed for full capacity. It was very important, therefore, that only very heavy slow moving pumping engines be installed. These they were prepared to furnish and they believed there would be no vibration from them.

That the intentions of the contractors were good there can be no doubt and probably in any position but that on McTavish street where the ground is "made" the pumping engine would have given good satisfaction. In this case the vibration disturbed a whole residential neighborhood. The contractors when interviewed state they agreed to erect a pump that would be as noiseless as possible. It should be remembered that they did not build the foundation for the pump; that duty was undertaken by outside parties. On account of this it was inexplicable to the company how it could be alleged by the superintendent of the water department that everything had not been done to provide a pump that would be satisfactory in every particular. If the ground had been satisfactory and had the foundation been what it should be there would have been no vibration and no complaint against the company.

Citizens living in the vicinity were not particularly interested in the question as to where the blame should lie. They wanted the engine stopped and application was made to Justice Davidson for an interim injunction to prevent the city from operating this electric pumping plant. Among those who gave evidence to the effect that their whole household was upset—some of them saying that they would have to move away from the neighborhood—were the following: H. V. Meredith, Samuel Ward, E. B. Greenshileds, James A. Gillespie, Principal Peterson of McGill University; Professor McLeod, Professor Ruttan, Dr. Stewart, Dr. Shirres. After reviewing the evidence at considerable length, his Lordship gave judgment as follows:

"There is no dispute that the respondents can pump water up to the high level reservoir without using an electrical pump of this kind. They have committed themselves to a pure experiment, and they cannot be permitted to work this out at the cost of the health and suffering of an extended neighborhood. If express and statutory concessions or authority existed for the use of such a pump, then whatever the results, they would need to be borne. But no such law exists.

"A public duty authorized by statute must be distinguished from the manner of its execution. In regard to the latter, it only includes, to use the words of Vaughan, J., in the Harrison case: 'All things reasonable necessary for the execution therof.'

"I am impressed with the fact that respondents assert the existing condition of affairs to be within their right, and that their purpose is, unless restrained, to continue working the pump. They claim the right to go on inflicting the great and widespread resulting injury. Thus. the matter is of immediate and pressing necessity.

"Only the doctrine of greater convenience remains for reference. Evidently respondents can still supply the upper reservoir without this pump, for it is to be rejected if not up to contract. Barring accident, the existing plant can meet, twice over, the requirements of that limited source of supply. It appears from the evidence of Mr. Janin that nearly four years have elapsed since the council were advised to secure other than the present machinery. The contract was only signed two years later. These delays are inconsistent with a crisis. The questions involved do not affect the water supply to the city generally.

"I grant the interlocutory order of injunction, but qualify it by permitting respondents to use the electrical pump if pressing necessity arises from the breaking down of the present plant; and also by permitting them for a brief daily period, to test any improvements that may bring about a cessation of present difficulties. Details as to these conditions, and the settling of security will be arranged in chambers." Costs to follow final determination of the proceedings.

Machinery and Electrical Notes.

The Le Roi mine at Rossland, B.C., is increasing its facilities in regard to electrical power.

The second new boiler for the pumping station at North Sydney, N.S., has arrived from the Robb Engineer Co.'s works at Amherst, N.S.

The last Ontario Gazette contains the notice of the granting of a license by the Ontario Government to the Canadian Westinghouse, Limited, to carry on their business in Ontario.

The Guelph Foundry Co., Guelph, Ont., at a recent meeting of the direc-

tors, decided to erect a large four-storey addition to their foundry on Paisley street. This was found necessary on account of their large increase in business.

The Manitoba Iron Works, Limited, Winnipeg, have secured the exclusive handling of the business of the Madison Williams, manufacturer of sawmill machinery and equipment, Port Perry, Ont., and hereafter they will keep a full line of Port Perry machinery in stock.

A new 125 horse-power engine has just been installed in the Cape Breton Electric Co.'s power house at North Sydney. It replaces an old 80 horse-power which has been in use during the past year. This old one will be taken to Sydney to be thoroughly repaired, after which it will replace one of the smaller engines now in use.

A report in the St. James' Gazette says that another tube railway has been completed in London and will be opend shortly. It is that of the Great Northern and City Railway and is claimed to be the finest underground railway in the world. The tunnel is 16 feet in diameter, which is 4 feet 2 inches larger than any other tube railway in London. The coaches are equal in width to the widest coaches run on any British railway. All underground structures are fireproof.

A large bridge of cantilever structure, the main open of which will be 1,800 feet, the longest in the world, is to be built over the Strait of Canso, N.S., between Hastings and Cape Porcupine. The total length of the bridge will be 3,300 feet, and it will be 150 feet above the high-water level to allow the passage of the largest ships. About 3,800 tons of steel will be used in its construction which will be supplied by the Dominion Iron and Steel Co. The estimated cost is $5,500,000.

The recent departure of F. S. Pearson, F. Q. Wanklyn and other Canadian capitalists for Mexico, where the construction of the immense electric plant for the Mexican Light and Power Co. again attracts attention to Canadian enterprise in other countries. The main generating station of the Mexican Co. will be situated at the falls of Necaxa, where at least 45,000 horse-power will be generated, while the plans provide that ultimately the plant will generate 80,000 horse-power. The contract for the genrators has been placed in Germany.

The Board of Governors of McGill University have at present under their consideration the establishment of a school of railroad engineering and transportation in connection with the university. This step has the support and advocacy of Sir Thomas Shaughnessy and Mr. C. M. Hays, and the Canadian Pacific and Grand Trunk Railways have taken joint action in promising an annual subsidy of $3,000 each. Also Messrs. Mackenzie & Mann, on behalf of the Canada Northern, have engaged to advance an annual subsidy of not less than $2,000.

THE PROPOSED ONTARIO BUSINESS TAX.

A REPRESENTATIVE of "Hardware and Metal" some days ago interviewed J. C. Forman, the assistant assessment commissioner of Toronto, for the purpose of getting an expression of opinion from him in regard to the proposed new assessment law of Ontario, and particularly that part of it relating to the taxation of business houses. In effect, he said :

"Personal property will cease to be assessed when the new assessment comes into force. A loss of over $10.-000,000 occasioned by the annulment of the personalty tax and in addition, a large loss on income now assessed for taxation at 4½ mills, are to be made up by what is known as the house tax, the business tax and the income tax, respectively.

"The business tax is a tax of from 7½ to 10 per cent. on the annual value of the premises occupied by a business man for business purposes, the said annual value being ascertained by applying 7 per cent. on the assessed value of the property, i.e., on property assessed at $10,000 the business tax on a 7½ per cent. basis is $52.50. The civic authorities may fix the rate of taxation, but must restrain themselves between 7½ and 10 per cent.

"Merchants are liable to assessment on income derived from that other than their business. There is no exemption on this income, but the rating under the new act is from 5 to 7 mills on the dollar. In addition, every person is liable to assessment on his respective income ; those in receipt of a fixed income are assessable on the excess over $1,000. A professional man, i.e., doctor, lawyer, broker, etc., becomes liable if his income is over $4,000, but it must be remembered that he as well as the merchant is also assessed on the annual value of premises occupied.

"The House Tax. Here there is exemption on the annual value (rental) in towns and cities, graded according to population. In Toronto, the exemption is $245, or 7 per cent. on house and land valued at $3,500. Thus every dwelling of $3,500 and under is not liable for the tax. All property over $3,500 becomes liable after the deduction of $245 exemption, and is assessable at from 5 to 7½ per cent. on annual value.

"This is not a heavy tax, since property valued at $4,000 would contribute only $2.63 at the maximum rate of 7½ per cent. on annual valuation."

* * *

Since the above was written Hon. J. M. Gibson, Attorney-General for Ontario, has introduced in the Legislature amendments which radically change the proposed measure. In introducing his amendments, according to the report in The Toronto Globe, Mr. Gibson opened with an explanation of the changes he proposed as compared with the text of the measure recommended by the Assessment Commission. The following was suggested as the clause defining machinery to be exempted :—"All machinery used for manufacturing purposes only, except that owned, operated or used by a person having right, authority or permission to maintain, or operate within Ontario in, under, above, on or through any highway, road, street, lane, public place or public water, any structures or other things for the purposes of bridges, tramways or street railways, or for the purpose of conducting steam, heat, water, gas, oil, electricity, or any property, substance or product capable of transportation, transmission or conveyance, for the supply of water, light, heat, power, transportation, telegraphic, telephonic or other service."

The chairman remarked that it would be a disappointment if the immense amount of machinery in Toronto would be exempted ; therefore, he suggested the clause which made specific instructions that the exemptions would not apply to the machinery of street railways, telegraph, telephone and like companies.

BUSINESS TAX SCALE.

The changes proposed in the business tax were rather revolutionary. The chairman said there was plenty of elasticity in their opportunities, but he favored a graded tax, by which the following for business tax purposes would be added to the ordinary assessment of the following classes, and in the following proportions :—

Distillers, 125 per cent. This would work out so as to reduce somewhat the taxation hitherto paid by them.

Brewers, 100 per cent.

Wholesale merchant, insurance company, loan company or a trust company, as defined by the act ; express company, land company, bank, banker or any other financial business, 75 per cent.

Departmental store or retail merchant dealing in more than five branches of retail trade or business in the same premises or in separate premises under the same roof or connected premises, where the assessed value of the premises exceeds $20,000 ; manufacturer, lithographer, printer or publisher, or hotel or club, 50 per cent. of the assessed value.

EFFECT ON THE BIG STORES.

Mr. MacKay : Will that assess departmental stores heavily enough ?

The chairman : I think it will ; it will make some of them pay a good deal more than they are paying now, and will make one of them somewhat less—Eaton slightly less and the other two considerably more.

Mr. Lee : That will hit every storekeeper in the country who keeps a small store, carrying all lines.

The chairman : No ; the provision respecting $20,000 exemption was designed especially to meet their case.

The assessment of barrister, solicitor, notary public, conveyancer, physician, surgeon, oculist, aurist, medical electrician, dentist, veterinarian, civil or mining or consulting or mechanical or electrical engineer, surveyor or architect, 50 per cent. of the assessed value.

The assessment of retail merchants, photographers, theatre, concert hall, curling or skating rink, or other places of amusement, boarding stable, livery or letter of vehicles or other property for hire, and restaurant, eating-house, or other place of public entertainment, or any trade or commercial business not before specially mentioned, 25 per cent. of the assessed value.

Every person carrying on business of telegraph or telephone company, or tramway or street railway, transmission of oil or water, or of steam, heat, gas, or electricity for the purpose of light, heat or power, 25 per cent. of the assessed value, other than a highway, road, street, lane or public place or water, occupied by such person exclusive of the value of any machinery, plant or appliances erected upon, in, over, under or affixed to such land.

That, the chairman explained, would make public utility companies pay a business tax. Another provision made $100 the minimum assessment under this business tax.

EXEMPTIONS ON INCOME.

The income tax was adjusted to provide exemptions up to $1,000 of personal earnings and to $400 in the case of income derived from other sources than personal earnings. It was provided that every person not liable to business assessment and every person liable to business assessment in respect of income not derived from the business in respect of which he is assessable shall be liable to income tax.

The chairman here pointed out a difficulty arising in the case of a secretary or manager of an incorporated company owning the most of the stock, who would pay the business tax through the company and an income tax as an individual. The result would be to encourage dissolving the company and forming a partnership.

Mr. Hoyle : There will not be a clause but will impose hardship in some cases.

The chairman suggested a clause covering the objection he noted by providing that persons personally engaged in the management of a company shall not be assessed on income.

Mr. Foy agreed that this was a wise provision, but at Mr. Hoyle's suggestion that the members "be allowed to sleep over that clause," it stood over.

TAX ON CORPORATIONS.

The proposed taxation of telegraph and telephone companies was next explained. In cities, towns and villages they are to be assessed on a percentage of their gross receipts. In every township they shall be assessed at $200 for every mile of one wire, and $7.50 per per mile for each mile of additional wire placed or strung, with exemptions in townships from other municipal taxation, and in cities for all structures, on, over or under or fixed to any highway, road, street, lane, or public place or water.

Provision was also made for a full annual statement by the companies to the Provincial Secretary and to the municipality concerned of the gross receipts and mileage of wire in every township municipality in the province in the year past.

SMALL PLACES TO SUFFER.

Mr. Latchford: I think there should be a distinction between places where there is very little business and those where there is a lot of business. The result of this will be the closing up of the offices in the remote districts.

The chairman said it was true there were many little lines running into farm houses in the country. He believed the proposed provision would wipe out one of the most annoying, nagging and distressing sources of quarrel between the so-called public corporations and the municipalities.

Mr. Latchford: How would it be to make an exception in the case of remote places where the receipts are less than $50 or $100.

The chairman: I would sooner give the municipalities authority to reduce the assessment or exempt them.

Mr. Hoyle: The principle of the bill is a sound one.

The clause compelling employers to state the wages of all their employes receiving over $1,000 was altered so as to include all employes.

TWO TAXES DROPPED.

The chairman then announced that it was proposed to drop the provisions for a house tax and for a Provincial Board of Assessment. The bill made certain provisions for taxing the property of ordinary steam railways when running along roads or streets in a municipality, the assessment of steam railways in respect of right of way, and so on.

It was the intention of the Government that a very substantial addition to the tax of railways to the province should be passed at the present session. With that provision and the one for the telephone company's tax there did not seem to be any necessity for the Provincial Board. They had considered the matter fully, and there did not seem to be any necessity for trying to get at such an intangible thing as a special franchise.

The chairman then quoted sections from the Assessment Act passed within the last two or three years, which he desired to have incorporated. The principal clause was that providing that the property of companies having structures on the public highways be assessed at their actual cash value. Provisions were also read to make it incumbent on railways to forward each year full returns of their mileage, lands, vacant lands, etc.

WILL MAKE INGOT COPPER.

The Syracuse Smelting Works, Montreal, intend starting about the 1st of February to produce ingot copper. Their capacity will be 10 tons every 24 hours, their brand name "M.C.C." This is a departure which will be appreciated, as it marks another step forward in Canadian industry, as ingot copper is not now being made in Canada.

NEWMARKET PLANT TO START.

THE great fly-wheel, weighing 20,000 pounds, has been placed in the Newmarket factory of United Factories, Limited, and once more Newmarket's principal industry and the largest exclusive woodenware factory in Canada is running to its full capacity.

On November 18, through the explosion of a boiler, this factory, where Cane's woodenware is manufactured, was partially wrecked. The boiler house was completely demolished and the engines buried under tons of bricks, while adjacent buildings were damaged to more or less extent. With the usual enterprise shown by this company, before sunset on the day of the explosion they had workmen busily engaged in removing the debris, and every effort was put forth to place the factory in runnin condition at the earliest possible date without regard to the question of expense. In replacing the damaged machinery and rebuilding necessary, the opportunity was taken to make considerable increase in the plant, which a constantly growing business has made necessary.

The four old boilers, of a combined capacity of 400 horsepower, were replaced with Babcock & Wilcox's water-tube boilers, of the very latest type, with a capacity of 750 horsepower. The chimney, which it was at first thought could be repaired, but which a more thorough examination showed must come down, has been replaced by a new one, which stands 100 feet high, and has an outlet capacity 300 per cent. greater than the old chimney, the old having an outlet of 9 square feet and the new one 30 square feet.

In face of the constant discouragements in the way of delays in delivering of machinery and extreme cold weather, which interfered with such work as the building of the huge chimney, on which the workmen could work but a few hours at a time, the work has been pushed with a never faltering energy.

The property lost at the time of the explosion was considerable, but the loss in business through their inability to fill orders, was far greater. The factory had been pushed to its utmost capacity for months past, and it was only by the greatest effort that orders were kept up with, and, at the time of the explosion, a great number of unfilled orders were on hand, the shutting down of the factory for nearly three months was, therefore, a very serious matter. The cutting off of such a large percentage of Canada's supply of woodenware as represented by the United Factories', Limited, output, placed many large consumers at their wits' ends to get what was necessary for their immediate requirements, and importations from the United States was in some cases resorted to.

Anticipating the early resumption of work, orders have been freely taken during the past few weeks, so that the factory will start up at full capacity in every department, but with increased facilities it is expected that orders will be promptly filled.

PREFERENCE FOR CANADIAN CEMENT.

The Toronto Board of Control have taken a radical step in manifesting their preference for Canadian-made goods. At a recent meeting, when a discussion re the purchase of cement came up, a majority of the Board decided to recommend to the City Council that Canadian cement be used notwithstanding the fact that the lowest price on the tender under consideration was made by a United States concern. Last year Toronto used about 8,000 barrels of cement, and the difference was about 11½c. a barrel, or about $1,000

A JUG-HANDLED PURCHASE.

IN times of low prices, such as at present with linseed oil at 50c. for boiled, it is often of great advantage for a retailer to be able to place his order for future delivery, and thus secure himself against a probable rise in the market. This has always been the custom with keen buyers, but so frequently has the privilege been abused by some dealers that the manufacturers are becoming opposed to selling in this way, and one could not blame them if they come to some agreement to protect their interests against those who do not keep faith with them.

Briefly, the case is this. A merchant orders oil from a manufacturer during a period of low prices, at the current market price. The order is placed, say in January, and it is to be delivered in May or June, the purchaser agreeing to notify the seller when he wants it shipped. April comes, and the manufacturer having received no word from his customer as to shipping the oil, writes to him inquiring when he desires it.

The merchant's reply is to the effect that he wishes to cancel the order, as he had been able to purchase elsewhere more advantageously. The manufacturer has the law on his side if he wishes to hold the merchant to his order, or agreement. But perhaps the oil is only a comparatively small part of the merchant's purchase at that factory, and should the manufacturer stick up for his own rights, he will probably lose all future business from that customer.

This is rather a mean advantage to take. The manufacturer runs his risk and his customer should run his also. Should the market rise, the manufacturer loses money on that sale, (for in that case the customer religiously stands by his agreement); but should it go lower, the manufacturer is asked to meet the price, or lose the sale—not of this one purchase, for it would be to his benefit if he were to lose it, but of other of his lines in the future.

We must conclude that this sort of "buying" for future delivery is one of the best things we know of—for the merchant.

THE COMPENSATION FOR DULL TRADE.

SO trade is dull! The roads for miles about the town are blocked and buyers only come in to do business when they literally need the goods!

To some merchants this condition of affairs will be most depressing; others will welcome the slackening of responsibilities which is the usual accompaniment of the quiet weeks; others, again, will find the compensation for dull trade in the opportunity provided for planning, for reconstruction, for improving the store's appearance, the business system—in short, to introduce the reforms which they have desired for some time to institute.

It has been said that it is to the man who thinks that the plum falls; in equal degree it is to the merchant who plans and who carries out his plans that the plum of profitable trade descends. He so prepares his plans that by a law as immutable as the law of gravitation increased business and a better margin of profit follows each step he makes towards his business ideal.

Some hardwaremen are content. For the contented man, the person who is so satisfied with existing conditions that he will not try to change them in the hope of improving them, one cannot help feeling pity.

Some hardwaremen are hopeless. For the man who has been so often defeated in his efforts to "get ahead," who has become seized with the conviction "My business is as large as it ever will be in this town," one can extend sympathy but little advice, for the latter would be wasted.

Some hardwaremen are lazy. To the man who has got into the rut, who has done his business in the same way, in the same store, and without ever giving the store a good overhauling, one can neither give sympathy nor extend pity.

To all hardwaremen, the dull times offer one great compensation. Are you content? Spend two hours in a fair examination to see if your store is what it might be. Then go about for two days and ask your neighbors for suggestions as to how to improve your store and your business methods. You may get a surprise. Are you hopeless? Cheer up! No matter how little capital you have, no matter how hard you have worked in the past, you can make your life better, yourself more useful to the world, to your family and yourself if you will "plan your work and work your plan." Don't try to attend to every detail yourself. Possibly it might be wise to hire a boy or a girl to mind the shop so that you can get out more about town, so that you can get out after trade if it does not come in to you.

Are you lazy? It will take all your candor, all your fairness of spirit to admit it. It would be easier to admit that you are not as energetic as some other business men in the town. But the question is, are you as energetic as you could be and should be? If you are not then the message of dull trade to you is to either get out and hustle or stay in and fix up. Start in to-day to do something different to what you are in the habit of doing, something calculated to

increase the attention and respect paid your store by the buyers in your town and district. Trade comes to the merchant who works for it, who deserves it.

MUD SLINGING IN ONTARIO POLITICS.

UNTIL recently there was good ground for the hope that the mud-slinging school of politics which prevailed some 25 or 30 years ago, was happily a thing of the past. It is the more to be regretted therefor that this sort of thing should be revived as it has been revived in the Province of Ontario. Within the last few months there has been a growing disregard of the amenities of public life both within and without the Legislative chamber. Public questions of the day, instead of constituting the topics of political discussion have been systematically ignored and honorable gentlemen from both sides of the house have addressed themselves to unelevating trivialities and degrading personalities until the general public are, to a great measure, disgusted and heartily sick of the whole unedifying spectacle.

The climax was reached at Woodstock Saturday last when the depth of coarseness and indecency were sounded by Mr. R. R. Gamey. It is time a halt was called when not content with besmirching the characters of honorable judges, holding them up to ridicule and contumely, he must violate the scantity of the family, ignore the most ordinary consideration due to woman and outrage the rights of private life by dragging in the names of two young married people who by no logical process could be connected with the matter under discussion, but for the sole malevolent purpose of inflicting pain upon their families.

The vulgar abuse which Mr. Gamey has for some months been hurling at the Chancellor and Mr. Justice Falconbridge, calling one of them a "cabbage head," was bad enough, but this latest outbreak marks him as a man incapable of appreciating what is demanded by ordinary decency.

No matter what may be thought of the Gamey charges and there are many who think that despite the finding of the commissioners the man was bought, his conduct of late has been a public scandal. The Globe alone of the Toronto papers printed the offensive language used at Woodstock, setting up as its plea the necessity for calling a halt to Mr. Gamey's excesses. The Mail and Empire denounces the Globe for publishing the cruel personality. But if it is reprehensible for the Globe to publish such matter in its columns is not the author of the outrage deserving of still more vigorous denunciation?

Mr. Whitney has taken a creditable course in refusing to be in any way associated with Mr. Gamey in his public speeches. Mr. Whitney can do Ontario public life an invaluable service and strengthen at once, we believe, himself and the Conservative party in Ontario by insisting that Mr. Gamey desist from a repetition of his scandalous speeches touching the life and movements of private individuals.

The great majority of errors are made through carelessness; learn to care; be exact; strive to have it absolutely right—making a mistake in business is like falling down in a foot race; it is a set-back.—The S.W.P.

The low tone of public life was reflected in the House on Wednesday last when the Speaker was compelled to appeal to the members for a better observance of parliamentary dignity.

None should be more concerned in the elevation of public life in this country than the business men. And it is to be hoped that those in Ontario who have any influence with Mr. Whitney will insist that he discipline the member for Manitoulin who seems to have lost all appreciation for the demands of either public or private life.

THE GRUMPY MERCHANT.

CHEERFULNESS has a commercial value. Customers have troubles enough of their own. They don't care to have those of their hardwareman inflicted upon them, and the man who insists upon recounting his tales of woe or what is practically the same thing, wearing a long face, will soon be recounting his woes to the sheriff and have valid reason for wearing a long face.

Yet there are some men in the business whose appearance and conversation is a standing invitation to a customer to return no more.

It is not necessary for a merchant to be facetious. That sort of thing is dangerous. Where one man succeeds ten will succeed only in making themselves rediculous. But one should always be cheerful. Be sunny, to quote a popular expression. A cheerful greeting changes the whole atmosphere of a store. The customer who came in with the purpose of spending as little as possible, inspired by the spirit of geniality will be disposed to take a more optimistic view of the world at large and himself in particular. He will be better friends with himself and the merchant and will, nine times out of ten, do a good turn for each by making purchases which had he been met with a long face he would not have entertained for a moment.

CAUTIOUS BUYING.

THE hardwareman should ever be careful about his buying, particularly of special lines. There is no loss which is more serious, more discouraging than the loss ensuing from unsalable or shopworn goods or from the sale of goods which are so inferior as to annoy and even drive away customers buying them.

Yet while the merchant should be cautious he should be aggressive. If he offered goods which should yield good returns if up to what is claimed for them he should, unless convinced of their inferiority, secure enough of them to give them a fair trial. And then, if he finds them to possess real merit he should not, in any case, wait for "the other fellow" to stock them first.

Should Retail Hardwaremen Organize?

IT is quite evident that the hardware trade are widely interested in the suggestion that the retail hardwaremen of Canada should organize an association to look after their welfare, to adjust differences between themselves and the jobbers or manufacturers and to hold conventions at which business methods can be discussed, and plans can be laid for securing desirable legislation, either Dominion or provincial.

On another page of this issue of HARDWARE AND METAL is given a report of a matter of serious import to business men all over Ontario. There should be a representative committee, composed of progressive, energetic hardwaremen, to make a study of the amendments to the Assessment Act which Hon. J. M. Gibson is introducing before the Ontario Legislature.

C. D. Ten Dyck.

Mr. Ten Eyck has been appointed Canadian representative of E. C. Atkins & Co., Indianapolis, Ind.

It may be said that there is to-day a "Merchants' Association," which hardwaremen may join. But this association has attempted too much, has been too general in its scope, to be of the greatest service to its members. The hardware section in Toronto has included some of the strongest men in the trade, yet it has not been able to do the work it might have done if these men represented the hardwaremen of Canada, or even of Ontario. Efforts have been made to extend the association beyond Toronto, but such efforts have lacked consistency and strength, with the result to discredit rather than increase confidence in the organization. It is clear that the hardwaremen of Ontario, if they are to do effective work, must secure their own organization and must unite to secure the most progressive and representative men to speak for them. Such men are not hard to find in the hardware trade, a body of men who, for intelligence, industry and progressiveness, would compare to advantage with any class or profession in Canada.

Last week were published letters from officials of two hardware associations in the United States. This week attention is drawn to the following:

Editor HARDWARE AND METAL:—

I am pleased to note there is a proposition to form a hardware association in your section, and shall be pleased to do anything possible to assist you. I enclose herewith a copy of our constitution and by-laws together with minutes of our organizing convention. Our association is young but aggressive. We have negotiations pending looking to a closer alliance with the hardware jobbers, and feel that we will be able to accomplish considerable for the benefit of the craft. I trust you will be able to get the dealers of your section together.

F. C. MOYS,

Secretary Colorado Retail Hardware Dealers' Association.
Boulder, Colorado.

* * *

Editor HARDWARE AND METAL:

In regard to the benefits of our state and local associations, we have felt great advantage in coming together and agreeing to maintain uniform prices on all staple articles in hardware and implements.

As an instance, we formerly sold sash weights, nails, building paper, parlor door hangers and many other articles classed as rough hardware at about cost. To-day with our signed agreements as to prices to ask we are selling as many goods, with as good satisfaction to the consumers, and much better profits to ourselves than formerly.

We keep our expences down, the only salary man being the secretary. The Executive Committee is paid railroad fare and $2 for attendance at every meeting. We meet once per month, and act on any complaints coming from our members. These appear to grow less at each meeting. We believe it a good plan to have members of the state organization have their local organizations in every city of two or more thousands or where there exists excessive competition, by coming together, they in time learn of the benefits derived and form acquaintance with their competitors, and which they find not so bad a fellow after all. In other words, they are taught to believe in each other. The pamphlets sent you will impart further instructions.

C. W. Damerel

Southern California Retail Hardware Association.
Los Angeles, California.

Mr. Damerel expresses in terse language many advantages which have followed the formation of the state association in California and the local organizations in connection therewith. Could similar results be expected in Canada? Beyond question, yes! There are the grievances, there is the desire, the strength and the ability to correct them, and there would be the same success if the efforts were guided by the best minds, the most representative hardwaremen in the country.

Is this a live issue? Are hardwaremen sufficiently interested in the matter to express their views, to show their interest in the matter? If so, HARDWARE AND METAL would be pleased to publish such expressions of opinion.

What do you think about it?

The late W. H. Lindsay.

Formerly of the advertising staff of The MacLean Publishing Co., whose sudden death was recently chronicled in these columns.

PERSONAL MENTION.

H. Macaulay, hardware dealer, Chatham, Ont., writes: "'Hardware and Metal' is always welcome and appreciated."

Mr. Geo. H. Macfarlane, who for many years has represented the E. W. Gillett business in Manitoba, Northwest Territories, and British Columbia, has been appointed assistant general managre of E. W. Gillett Company, Limited. Mr. Macfarlane's long experience in the business and knowledge of the requirements of the trade, fit him for this responsible position. His many friends in the West and elsewhere will be pleased to hear of his promotion.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.

Montreal, Jan. 29, 1904.

Hardware.

TRADE again shows an improvement over the previous week, in spite of the continued severe weather, and general orders for shelf goods are coming in as well as for the same period last year. Most of the factories which were behind in deliveries last year, have been able to keep up with them this season, but they report that orders have begun to flow in as fast as they did a year ago. The American manufacturers of builders' hardware have given notice of an advance to take place on February 1, which will average about 10 per cent. Canadian jobbers have fairly good stocks on hand, but it is altogether probable that a good many leading prices will be advanced on these lines. Orders for April delivery are coming in freely for lawn mowers, sprinklers, hose and nozzles, garden harrows, lawn rakes, freezers, etc. A few orders for harvest tools have also been received. Taking all things into consideration prospects for Spring business are bright indeed; collections are very satisfactory, and money seems plentiful. Sleighbells, skates, hockey sticks and snow shovels are now practically at a standstill and are dropped from our list.

Spring Hinges—There is still a fair movement in hinges for future delivery, and prices are steady. We quote the following prices: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Game Traps—The market is very quiet. The discount is 72 1-2 per cent. on "Victor" and 60 and 2 1-2 per cent. on "Hawley & Norton."

Poultry Netting—A few orders are coming in for Spring delivery. The discounts for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-guage, the discounts are 55 and 5 per cent.

Wire Nails—There is no change in the price of these. Considering the season the trade doing is fairly satisfactory. We quote the following prices: $2.40 per keg in carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

Cut Nails—The demand is somewhat better. For immediate shipment orders are better than this time last year, and it appears that stocks in the country are very small. The price remains at the quotations of last week, $2.30 per keg, f.o.b. Montreal, Toronto, Hamilton, and St. John.

Fence Staples—There is light demand. We quote: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c. extra.

Pressed Spikes—The discount is 25 per cent.

Horsenails—There is a fair demand, an improvement over last year at this time. Our quotations are as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—A few orders are being received. Prices are unchanged. We again quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.ob. Montreal onlv.

Fire Shovels—These are falling off considerably in demand though for the time of year there is still a fair trade doing. We quote: No. 70, 39c. per dozen; No. 55, 55 to 82c. per dozen; No. 57, 82c. to $1.10 per dozen; No. 60, 70 to 88c. per dozen; No. 65, $1.10 to $1.23 per dozen; Duplex, No. 7, 96c. per doz.; No. 9, $1.20 per dozen; No. 11, $1.54 per dozen.

Snow Shovels—These are still going well. We quote: "Habitant," $2.50 to $2.75 per dozen; "Victor," 30 per cent. off; steel railroad shovels, 45 per cent. off.

Screen Wire Cloth—A few orders for Spring delivery are coming in. The price is $1,50 per 100 square feet.

Galvanized Coil Spring Wire—There is a fair trade at unchanged prices. We quote: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No. 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Car lots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in car lots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—The market is fairly active with orders for Spring delivery. We quote: No. 5, $3.65; Nos, 6, 7, and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12. $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. extra per 100 lbs. will be charged.

Barb Wire—There is not a great deal doing, though a few good orders have been recived. We quote as follows: $2.75 per 100 lbs. f.ob. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is no change. Prices are as follows: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.; hay-baling wire, 20 to 25c.

Fine Steel Wire—There is little doing. The discount continues 25 per cent. with net extras as follows: 1 and 2-lb. hanks, 25c. per 100 lb.; 1-2-lb. hanks, 37 1-2c., and 1-4-lb. hanks, 50c.

Brass Wire—Trade quiet; discount 60 per cent.

Copper Wire—Little doing; discount 60 per cent.

Rivets and Burrs—There is not much doing except for a few orders for future delivery. Discounts are: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs,

in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—All report a fair trade with bright Spring prospects. Our quotations are as follows: Carriage bolts, common ($1.00) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1.00) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1.00) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3.00) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes, 4c. per lb. off; nuts, hexagon, all sizes, 4 1-4c. per lb. off.

Washers, 45 per cent. off.

Screws—There is a fair trade. Discounts are: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—The market is very quiet. Our quotations are as follows: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London. St. John, N.B., and Halifax.

Lanterns—Some business is doing at unchanged prices. We again quote: Lift, hinged or tilt, $4 to $4.25 per doz.; cold blast No. 2, $7 to $7.50; painted dashboard, $6.50 to $6.75; plain dashboard, $6 to $6.25; searchlight, $20 to $24 doz.; brass cold blast, small, $9.75 to $10.

Cordage—The market is quiet for cordage. Cotton goods continue very firm as last quoted. Prices are: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11c.; single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 22 to 27c.; cotton twine, 22 to 24c. for 3 and 4 ply. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 30c.; cotton candle wick, 21c.

Building Paper—There is little doing in this line at present. We quote: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

Cement—There is nothing doing. We quote as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex store, and American, $2.20 to $2.40 ex-cars.

Firebrick—Market dull. English are quoted at $16 to $22 per 1,000, and Scotch at $17 to $22.

PLUMBING GOODS.

There continues to be a fairly good demand for iron pipe, which has been brought on by the exceedingly cold weather. Prices have been steady all round.

Lead Pipe—There is nothing new in this item. Composition and waste are worth 8c., and ordinary 7c. Discount 35 per cent.

Iron Pipe—A fairly good demand prevails. We quote: Standard pipe, per 100 feet, in lengths under 19 feet—black, 1-8-in., $2.30; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55. Galvanized—1-4-in., $3.20; 3-8-in., $3.45; 1-2-in., $3.90; 3-4-in., $5; 1-in., $7.20; 1 1-4-in., $10.05; 1 1-2-in., $12.20; 2-in., $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in., $4.20; 3-4-in., $5.25; 1-in., $7.55; 1 1-4-in., $10.55; 1 1-2-in., $12.75; 2-in., $17.60. Galvanized—1-2 in., $5.20; 3-4-in., $6.65; 1-in., $9.55; 1 1-4-in., $13.25; 1 1-2-in., $16; 2-in.. $21.

Soil Pipe and Fittings—Trade continues fair. The discounts are: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—There has been no change in prices, but the market is firm at 18c. for wire solder and 17 1-2c. for bar.

METALS.

The local metal market has been, as is usually expected at this time of year, quiet, and what movement there was, was confined to one or two lines. In England some advances are quoted, which will likely have a slight effect here, but locally no actual change in prices has taken place. A cable from England on Tuesday announced a stiffening in sheet lead and a rising market.

Pig Iron—Trade very quiet. We quote: Summerlee, $19.25 to $19.75; Carron, No. 1, $21; do., No. 3, $18.50 to $19; Middlesboro', No. 3, $17 to $17.50; Ayersome, No. 1, $20; do., No. 3, $19.40.

Bar Iron—We quote: Merchants' bar, $1.80; horseshoe iron, $2.05; forged iron, $2.

Black Sheets—There is some improvement in the demand this week, but the market is still on the quiet side. We quote as follows: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 18 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Galvanized Iron—There is no change. We again quote as follows: Gorbal's "Best Best," $4.30; 28 Queen's Head, $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates—The market is still firm here. In England an advance of from 1 1-2d. to 3d. per box has been made. Locally, cokes sell for $3.75, and charcoals for $4.

Ingot Tin—This is firmly held at 32 to 32 1-2c.

Terne Plates—There is no change in the price. We quote $6.75 to $7.

Coil Chains—The prices remain as follows: No. 6, 10c.; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 3-8-inch., $4.00; 7-16-inch, $3.80; 1-2-inch, $3.70; 9-16-in., $3.55; 5-8-in., $3.35; 3-4-in., $3.30; 7-8-in., $3.25; and 1-in., $3.20, with 10c allowance on carlots.

Canada Plates—There is a fair movement. A cable from England on Tuesday quoted an advance on one line of 5s. per ton. The local market is stiffening in sympathy, and buyers are advised to place orders early. We quote: 52s.. $2.30; 60s., $2.40; 75s., $2.55; full polished, $3.60, and galvanized, $4 to $4.10; galvanized 60s., $4.25 to $4.35.

Steel—Trade quiet. We quote: Sleighshoe, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—The demand is fairly good. We quote: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Jonas & Colver's, 10 to 20c; "Air Hardening," 50 to 65c. per lb.; Conqueror, 7 1-4c.

Ingot Copper—No change. Price firm at $13.50 to $13.75 per 100 lbs.

Pig Lead—Quiet at $3.20 to $3.30.

Sheet Zinc—There is a fair demand. Prices are unchanged. We quote: $6.15 to $6.25 in cask lots, and $6.50 for smaller.

Zinc Spelter—We quote 6c.

Scrap Metals—Very little is doing in this line, and prices are unchanged. We quote Heavy copper and wire, 9 1-2 to 10c per lb.; light copper 10c.; heavy red brass, 10c.; heavy yellow, 8 1-2c.; light brass, 5 1-2c.; lead, 2 1-4 to 2 1-2c.; zinc, 2 3-4 to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $13 to $15; stove plate, $12; mallable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers 6 to 6 1-2c. per lb.

Ashes.

Prices are well mantained. There is a good demand, and the volume of business is fair. We quote:

First pots, per cwt	6 00	6 10
Seconds	5 60	5 65
Pearls, per 100 lb	7 00	7 25

Hides.

There has been no change in prices. Receipts have improved but slightly We quote:

No. 1 beef hides	0 08	0 08½
No. 2 "	0 07	0 07½
No. 3 "	0 06	0 06½
Lambskins	....	0 75
No. 1 calfskins	....	0 10

ONTARIO MARKETS.

Office of HARDWARE AND METAL.
10 Front Street, East.

Toronto, Jan. 30, 1904.

Hardware.

WEATHER conditions are having more effect on market conditions than any other influence at the moment. Travellers find it practically impossible to cover the territory and the wholesale houses and manufacturers are unable to ship their goods. One manufacturer complains, in fact, that he expects to have to shut down on account of lack of fuel. The railroads have been working at the disadvantage of more business than they can properly handle for some time and the excessive snow fall of resent weeks seems to have found them totally unable to cope with the situation. The result has been unsettling to a large degree, though the situation is infinitely better than during the tie-up and coal scarcity last year. During the last half of the present week there has been some improvement but there is still room for lots more. There is no pessimism, however, as an active season is anticipated by retailers. Prices are steady throughout, the only change being in cotton goods which continue to stiffen.

Screen Wire Cloth—Orders are coming in fairly well at the new prices, $1.50 per 100 square feet.

Spring Hinges—A fair business is reported. Prices are steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—There is a fairly good trade at steady prices. Prices are now steady as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8, and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. per 100 lbs. extra charged.

Barb Wire—Not many orders are coming in, but what do come are of large proportions as a rule. We now quote as follows: $2.75 per 100 lbs. f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—A fair trade for later delivery is reported. Prices are now as follows: No. 9, $2.70 per 100 lbs. f.o.b. Cleveland, freights equalized with factory points at Hamilton, London, Welland or Windsor and allowance to other points up to 25c.; carlots, $2.65, freight allowance to 20c.

Wire Nails—There is a moderate future order business doing with the base price for ordinary lots firm at $2.45 per keg f.o.b. Toronto, with carlots $2.40.

Cut Nails—The market is not strong and there is not much doing even at the reduced price, $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—A nice trade for future delivery is reported, with prices fairly steady. We again quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horsenails—Very little doing this week. We quote discounts as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Screws—Business is not active. Prices are steady. We quote as follows: Flat head bright, 87 1-2 per cent. discount; round head bright 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.: flat head bronze, 75 per cent.

Rivets and Burrs—Business is improving at steady prices. Our quotations are: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—A fairly strong situation is reported, with a fair trade doing. We quote the following prices: Carriage bolts, common ($1 list), 3-16 and 1-4-in., 60 per cent.; 5-16 and 3-8-in., 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—Cotton prices continue to go skyward and cordage makers are following the advances in all lines in which cotton enters. We quote as follows: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11 1-2c.; single lathyarn, 11c.; double shingleyarn, 11 1-2c.; single shingleyarn, 11c.; sashcord "Hercules," 29 to 30c; "Star," 36 to 38c.; cotton rope, 3-16-in. and up, 20 1-2 to 22c.; 5-32-in., 25 to 27c.; 1-8-in., 25 to 28c.; cotton twine, 3-ply, 23 to 24c.; 4-ply, 27 1-2 to 28c.; calking cotton, 16c.; cotton waste, colored, 6 3-4c.; white, 10 to 12c.

Winter Lines—The skate and small sleigh trade has been an active one but is over to all intents. A few sorting orders for sleighbells, horse robes, carriage heaters, etc., come in. Snow shovels are still in demand. Prices are steady on all these lines.

Woodenware—It is not expected that there will be much change in prices this season. Lumber is still very high, but it is not likely an advance will result. We quote per dozen: Washboards, Victor $1.35; Crown, $1.45; Improved Globe, $1.60; Standard Globe, $1.70; Original solid Globe, $2; Superior Solid Back Globe, $2.15; Jubilee, $2.10; Pony, 95c.; Dominion King (glass), $3.10. Tubs, No. 0, $10.50; No. 1, $8.50; No. 2, $7.50;

No. 3, $6.50. Pails. No. 1. 2 hoops, $1.75 and $1.90.

Building Paper—The market in building paper continues quiet as usual at this season. Our quotations are: Tarred felt, $1.85 per 100 lbs.; 2-ply read roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c. per roll.

Cement—Cement is flat this week. Last week's prices continue unchanged. We again quote as follows: Canadian Portland at $2.05 to $2.65 Toronto, and $1.65 to $1.90 at the works; American Portland, $2 Toronto.

Firebricks—Firebricks are quiet. We quote English and Scotch each at 28 to 35c.

PLUMBING GOODS.

There is not much doing, the trade being under much the same influences which are curtailing activity in hardware lines. Discounts on soil pipe and fittings are slightly higher. Otherwise thare is no change.

Lead Pipe—Business is quiet as usual at this season. Our quotations are: Lead, 7c.; lead waste pipe, 8c.; discount 35 per cent.

Soil Pipe and Fittings—Trade is fair in soil pipe and fittings. Discounts from list prices have advanced since last week. We quote as follows: Light soil pipe, 50 per cent.; light soil pipe fittings, 50 and 10 per cent.; medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

Iron Pipe Fittings—Trade is quiet but steady in iron pipe fittings. We quote the following discounts: Malleable fittings, 15 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; nipples, up to 2-in., 65 per cent.; nipples 2 1-2 to 6-in., inclusive, 60 per cent.

Copper Range Boilers—Trade is steady. Last week's discounts at 15 per cent. continue.

Brass Goods—Fairly good trade doing in steamfitters' brass goods, with prices steady.

Iron Pipe—A fair business is doing in iron pipe this week. We quote f.o.b. Toronto: 1-8-in., $3.25; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55; 2 1-2-in.,

METALS.

Orders for forward delivery are coming in more freely, evidencing a more confident tone on the market. The heavy snow is interfering with deliveries, causing a great deal of extra correspondence and leading to an unusual amount of shipping by express, some such shipments reaching as high as half a ton. Prices are steady throughout. The pig situation in the United States is not strong but the quotations here are fairly well maintained. Bar iron prices are easy, cutting being frequent on large orders. Other lines are firm.

Pig Iron—An easier feeling is manifested in the United States and lower quotations are reported. There is not much disposition on this market, however, to quote below ruling quotations which are nominally $18.50 for No. 1 and $18 for No. 2, f.o.b. Toronto.

Bar Iron—Prices are nominally unchanged, but there is a greater disposition to cut prices for large orders. Our quotations are as follows: $1.80 f.o.b. Toronto for extras cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft. 20c., over 20 ft. by special agreement according to length and size.

Black Sheets—Prices are unchanged, a fair business doing. We quote: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—A good movement is recorded at fairly steady figures. A small quantity of U. S. plates is being imported. We quote: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—The London and New York markets show considerable fluctuations but the genral tendency is still upward. There is more business coming in for futre delivery. We now quote prices at $30.50 to $31.50.

Galvanized Sheets—Orders for future delivery more generous. We quote: Queen's Head, $4.25 to $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.25 for 28 gauge; Gordon Crown, $4.25 for 28 gauge.

Tinplates—The situation is stronger and orders are coming in more freely. We quote as follows: Coke plates, bright, 14x20, $3.75; charcoal plates, $4.25.

Copper—There is a fair movement. Prices steady as follows: Ingot copper, $14, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Don't Tie Yourself Up

RAILS

12, 14, 16, 18, 20, 24, 30, 35 and 56 lbs. to the Yard—carried in STOCK for prompt shipment. TRACK REQUISITES.

Sessenwein Bros., 103 Shannon St. .. MONTREAL.

Lead—Business is good and quotations steady. We quote: $3.30 per 100 lb. for pig lead and $3.65 for bar lead.

Zinc Spelter—Prices show an upward tendency at primary market, but the local situation is unchanged at 6 to 6 1-2c. per lb.

Zinc Sheets—The market is firm and a fair business doing. We quote: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c., and wiping, 17c.

Petroleum—There has been a decrease of 1-2c. in Canadian water white, American prime white and American water white. Barring this price change nothing special is noted. We quote as follows: Canadian prime white, 19 1-2c.; Canadian water white, 21c.; American prime white, 20c.; American water white, 21 1-2c., ex-warehouse.

Old Material—Trade in old material is decidedly quiet this week. Declines of from 1-4 to 1-2c. are noticeable in red brass, lead and old rubbers, while some dealers quote an advance of 1-4c. in heavy yellow brass. We quote as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c. per lb.; heavy red brass, 9 1-2c. per lb.; heavy yellow brass, 8 to 8 1-4c. per lb.; light brass, 5c. per lb.; lead, $2.35 per cwt.; scrap zinc, 3c per lb.; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast scrap, $13 to $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c. per lb.; country mixed rags, 50c. per 100 lb.

Hides, Skins and Wool.

The market is much the same as last week. Tallow is showing up a little brisker, a slight advance of 1-4c. being noted. We quote:

HIDES.

The Department of Railways and Canals has awarded the contract for the construction of the swing bridge over the Lachine Canal, at the present site of Brewster's bridge, to Messrs. John Quinlan & Co., Montreal.

The Pittsburg Iron Market.

THE Iron Age in its issue to-morrow will say: "The volume of business, with the exception of some branches is disappointing, although at times hope is buoyed up by a temporary freer movement. The tonnage is not these, and the industry must simply adjust itself to the prevailing conditions.

"In pig iron, the weakest section is now the Central West, where foundry iron is offering at low figures, while ther is practically no sale of Bessemer or basic pig. At the Lake Erie points No. 2 foundry has sold as low as $12.50, which is relatively much lower than the figures at which Southern makers are holding. Some of the latter appear to be growing uneasy at the loss of business. The efforts to get together have met with very scant encouragement, and there is very little hope of co-operation in any form.

"In the East, special circumstances have led to a moderate advance in basic pig, which may hold for some time and may evne gain headway; but there is no pretense that the condition of the steel trade or the general situation warrants it. The advance is purely local.

"The market for steel billets continues very narrow, but complaints continue to crop up of important concessions from the nominal official price, and particularly low figures are quoted on axle billets. Makers of axles claim that they must secure cheap steel in view of the very low figures at which axles have been selling lately—namely, on the basis of 1 20 and 1 25c. per lb. Pittsburg."

THE COPPER MARKET.

London, Jan. 27.—Spot copper opened firm £56 12s. 6d., futures at £56 10s. 0d., and after sales of 250 tons of spot and 450 tons of futures, closed firm at £56 15s. 0d. for spot and £56 12s. 6d. for futures, making price as compared with yesterday 10s. higher on spot and 12s 6d. higher on futures.

New York, Jan. 27.—London prices 10s. higher for spot G.M.B.'s and 12s. 6d. higher for futures.

The New York market is dull and quiet, there is very little new business reported. The exports for the month will amount very close to 25,000 tons.

Prices are unchanged.—The Metal Market.

Eastlake Steel Shingles

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

BUSINESS CONDITIONS IN NOVA SCOTIA.

By Regular Correspondent of HARDWARE AND METAL.

TRAVELLERS' orders have hardly been as good during the present month as at the same date last year, but it is expected that when the territory is next covered better results will be shown. The severity of the weather and the desire of merchants to hold off for a while to see what price changes the turn of the year would bring, have caused Spring orders to be smaller than they would otherwise nave been. The outlook for Spring is considered excellent, as all industries are in a prosperous condition. The decline in the price of lumber will have no immediate effect upon trade, although it will affect operators' profits. As it came after all arrangements for the season's work had been completed the cut and number of men employed will be larger than usual, and the distribution of money correspondingly great.

* * *

Markets here keep very steady. The changes during January have been less than for many years, and all important lines appear firmly held. Fishing supplies for the next month or two will comprise a large proportion of the trade of our hardware houses. In this department remarkably strong conditions exist, and scarcely 24 hours passes in which jobbers do not receive advice of some advances. Cotton lines, etc., have advanced a number of times in the last three months, and duck also is very firm.

* * *

Another line that is higher is woodenware. A local jobber who had not occasion to follow the market closely recently gave an order for this line and was surprised to find that the goods required when landed in Halifax would cost nearly one-third over what the cost would have been twelve months ago. Tool handles of all kinds are higher, especially ash goods. As a result of the high cost of rubber, jobbers anticipate an advance in wringers and possibly in rubber hose before the season ends.

* * *

An article that is receiving some attention at present is turpentine. The southern markets have boomed of late, and Montreal has advanced prices 10½c. per gallon in the last two weeks. The price at Halifax is regulated by the association, and there has been no change here as yet, although there probably will be an advance before this gets into the hands of the printer. The Montreal price at present in barrel lots is 94½c., while the Halifax quotation is 88c., an anomaly that cannot long continue.

Halifax Jan. 25, 1904.

TRADE CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of HARDWARE AND METAL.

THERE is much interest being taken in trade circles at present in the efforts to secure from the Provincial Government a revision of the Assessment Act, passed at the present session of the Legislature. At the time it was carried through the House, just before the Christmas recess, there was a strong protest entered by members, even on the Government side of the House, but the necessities of the Government in providing revenue were such that their friends were appealed to to give their support to the measure, a promise being given in return that the Government would appoint a commission to take up the question of assessment and taxation. This is now being pressed for by the Boards of Trade and other bodies of Victoria and Vancouver. A delegation is now in Victoria from the Vancouver Board of Trade, which will join with others in impressing on the Government the importance of immediate action, as well as pointing out the inequitable manner in which the new act bears upon business men established here.

* * *

Right after securing from the C.P.R. the concession so long sought in freight rates east from the coast to points such as Calgary and similarly situated places in the Territories, the business men are brought face to face with the proposed increase of 17½ per cent. increase in all commodity rates west. The suggestion of the Vancouver Board of Trade is that the west-bound tariffs of the Trans-Continental Freight Bureau be made to apply to British Columbia coast terminals. The Board's Freight Rates Committee also recommended that the services of a freight rate expert be secured to check the changes in the new tariff.

Some of the members thought the matter was purely one of interest to the wholesale men, as not all members of the Board of Trade were shippers. Another member suggested that it would be a good matter for the railway commission appointed by the Dominion Government to inquire into. The scope of the commission was not definitely known, and, besides, as some of the members pointed out, it would be necessary to prepare a case for submission to the commission.

* * *

The bearing of the new tariff, if it goes into effect as anticipated, will be seen from the remarks made by business men when they tell of prices which are quoted from the east. This is especially true on heavy machinery. One eastern representative, in calling on a sawmilling firm last week, said that he could not make the quotations on his line of machinery as low as last year, simply because the freight rates had gone up so appreciably.

* * *

In the outlook for trade in the coming season there is looming large a strong possibility of big demand for all sorts of mining tools, machinery and similar supplies for White Horse and the Alsek district, the new field 175 miles from the terminus of the White Pass Railway. Already there has been considerable inquiry for goods, and some figures on outfits asked for. At least, as one merchant says in describing the inquiries he has received, "It looks like outfitting." The number of people who are preparing to go north in anticipation of the new find turning out, on further development, as good as it seemed on prospect, is very large. There have been nearly 1,700 claims in the various localities recorded with the gold commissioner, and it is expected that a large number of the people who have taken up these claims will at least do some prospecting if not work them actively. In any case it is anticipated that there will be a big rush for the season. The chances of a very big yield of gold from the new field seem to be excellent.

* * *

Vancouver is already shaping away for another big year in building. During the year 1903 there was nearly $1,500,000 spent in new buildings, according to the building permits taken out, and, from these figures and the fact that the activity in house building still continues, and the demand for residential property is still as great as ever, the outlook for the building trades is splendid for the coming season. There has been no cessation of building operations, as there are at least 250 new houses under construction at the present time. There was a little flurry of Winter weather on the coast during this week, but it has all gone again, the snow and frost staying but two days.

* * *

The City of Vancouver last year used in making cement sidewalks 2,581 barrels of Portland cement. This year it is anticipated that at least double that quantity will be required. The price paid last year was $3.25 net to the city, but it is the expectation that this figure will be bettered considerably. It is the intention to get figures from various makers. At the present time there is none being made in British Columbia. There was a factory in this city, but it shut down a year or two ago. The sailing vessels usually bring large quantities from the Old Country, and there have also been shipments from Hong Kong and Japan.

* * *

In the lumber trade, the two export mills, Chemainus and Hastings (the latter at Vancouver), which have been in the Export Lumber Association, of the Pacific Coast, are up against hard competition by reason of the Export Association going to pieces. It included all the mills on the coast of British Columbia, Washington and Oregon, in the export trade, and for years the prices, so far as possible, the output and the proportion sold by each, was regulated by the association. Increasing keenness in competition has caused the break-up, and there seems to be no chance of settlement. Locally, the shingle trade, which has been rather overdone in the past year, is very quiet. It is the off year and the stocks are heavy yet. The chance is that better conditions will prevail this year.

Vancouver, Jan. 23, 1904.

THE TIN MARKET.

London, Jan. 27.—Spot Tin opened firm at £128 5s, 0d., futures £129 0s. 0d., and after sales of 100 tons of spot and 300 tons of futures closed easy at £127 15s. 0d. for spot and £128 5s. 0d. for futures, making price as compared with yesterday 5s higher on spot and 2s. 6d. lower on futures. Singapore quotation for tin to-day was equal to £129 0s. 0d. London, £2 10s. higher than yesterday's closing.

New York, Jan. 27.—The foreign market opened firm at an advance, as was expected, after the Banca sale, but the decline in the second cable and dull conditions here have put the New York market back to yesterday's closing figures, but with easier tendency at that as compared with the bullish feeling which ruled yesterday evening.—The Metal Market.

GERMANY'S PIG IRON OUTPUT.

Germany's pig iron production for 1903 was 10,085,634 tons, an increase of 1,682,974 tons, thus outstripping Great Britain for the first time in history.

The coal production of Germany for 1903 was 116,664,376 tons, an increase of 9,215,842 tons.

BUSINESS CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL,
Room 208, McIntyre Block.

Winnipeg, Jan. 25, 1904.

AS indicated last week there has been a revision of the price list, and quite a number of changes are to be noted. The changes are mostly in the line of reductions, and some are quite important. Bar iron is 10c. lower; wire nails are reduced 10c.; sheet zinc is 50c. lower per cask; coil chain has declined 1c. per pound. There has also been a change in the price of Mrs. Potts' sad irons, plain being quoted at 90c. and plated at $1. There has been no decline in barbed wire, although one has been talked of, and may come later. Stocks here are heavy, and it is not likely that prices here will decline, at least until the opening of navigation, as even at the recent decline in the east wire could not now be brought in to sell at the figures that have been quoted all Fall and Winter for barbed wire. In view of the constant talk of depression in the United States and the cry that Canada will be made a dumping ground for their surplus, it is rather interesting to note that several of the largest hardware manufacturing concerns of the United States have notified western Canadian jobbers that all prices will be advanced 10 to 15 per cent. next month. No reason is assigned beyond the fact that they find difficulty in keeping up with their orders. The advance in turpentine has not yet been reflected here, but it is quite possible it will be before the end of the week. Paints, oils and glass show a steady trade, without change of prices.

* * *

The Stewart Machinery Co., of Winnipeg, are considering the advisability of opening a branch at Calgary.

* * *

The City of Winnipeg will very shortly call for tenders for cars and equipment for hauling their own stone from the city quarry the coming season. It is expected that civic improvements will absorb even a larger quantity of stone than last year.

* * *

Building permits issued to date amount to $31,800. For the whole month of January last year permits only amounted to $12,400.

* * *

The Winnipeg Paint and Glass Co. will shortly move into their new premises on Notre Dame street east. This is one of the few solid stone warehouses in Winnipeg, and when quite completed will be three storeys high on a lofty basement. The 50-foot front up to the top of the first storey, is of massive cut stone. The Tyndall stone is particularly handsome when cut, and there is nothing finer in Winnipeg to-day than this building. Owing to cold weather coming earlier than usual, it was not possible to get the building up past the second floor, which has been closed in. The offices, which are being handsomely finished in hardwood and bevel glass, are on the ground floor, and are now nearly finished. The stock of the company is now being moved into the basement and ground floor, and no better proof of the growth of the house can be given than the rapid development of this business, which in so very short a time is requiring such greatly enlarged premises. The stock carried is a very fine one, particularly along the line of fancy stained glass.

INCREASED COKE DEMAND.

The improvement in the coke trade, which started two weeks ago, continues, the weekly reports showing a steady increase in the output over the last few weeks.

While the present improvement in the coke trade is due mainly to the resumption of work at the furnaces of the United States Steel Corporation, the fact that outside furnaces are preparing to resume operations makes it certain that further increases in the region's output will be noted weekly.—American Metal Market.

BAR IRON AT NEW YORK.

New York, Jan. 27.—There seems to be rather better demand but prices show no improvement and there are always three or four sellers to every inquiry. It is hard to get business and prices are kept at around the lowest point. For strictly best refined 1.37 1-2 to 1.42 1-2 covers the market here and these prices could probably be shaded.

JAMES WARNOCK & CO.
GALT, ONT.

NEW ZEALAND'S PREFERENTIAL TARIFF.

ITS PURPOSE AND EFFECT.

THE adoption of a preferential tariff in favor of British-made goods by our sister colony of New Zealand is a matter of very considerable interest to Canada, particularly as our trade with the Antipodes promises to assume no small proportions in the future. "The Grocer" is therefore pleased to give our readers the benefit of a letter, explaining the operation of the new Tariff Act, just received from Manson & Barr, Palmerston North, New Zealand, and which reads as follows :

The Government of this colony having just adopted a preferential customs tariff giving preference to British-made goods, it is now necessary for Canadian exporters to this colony to make a declaration on each invoice in the form as shown on slip we enclose. An individual member of the exporting house or company must make this declaration in his own name but on behalf of his firm.

Will you kindly mention this in your valuable paper, so that it may come under the notice of all Canadian exporters.

We post you under separate cover a copy of this customs act, and you will notice that the preference given takes the form of increasing the duties on all non-British goods coming under the different schedule. The first schedule is practically a dead letter, as all cement imported here is English Portland with very trifling exceptions.

The second schedule is mostly made up of goods at present paying 20 per cent. ad valorem duty, and on all goods coming under this schedule and not being British made the amount of duty payable will be increased by 50 per cent., making it practically 30 per cent. on these lines.

The third schedule is made up of goods that are at present free, but which, if not British made, will now have to pay 20 per cent. duty.

This third schedule will be the hardest on foreign goods, as it gives the British goods a clear 20 per cent. preference, as they will still be free.

We trust you will point out that it will be necessary for all Canadian exporters to this colony to have the declaration on their invoices to get the benefit of the preferential treatment, and, that if they omit this there will be a lot of delay and red tape here till the consignee can prove that the goods were made in Canada.

The act itself, beginning at the second section, reads as follows :

2. From and after the passing of this Act there shall be leviable on the several articles mentioned in the First and Second Schedules hereto imported into New Zealand and not being the produce or manufacture of some part of the British dominions, in addition to the duties authorized under any tariff for the time being in force in New Zealand, the following duties :—

(a.) On the article specified in the First Schedule hereto, an amount equal to the amount payable under the said tariff ;

(b.) On the articles specified in the Second Schedule hereto, an amount equal to one-half of the amount payable under the said tariff.

EXPORTERS' DECLARATION.

I, [full name], of the firm of , do hereby certify that this invoice, amounting to , for goods exported to New Zealand on account of [Name of person or firm to whom invoiced], is true and correct, and that the goods specified therein are bona fide the produce or manufacture of [Name of the part of the British dominions in which the goods have been produced or manufactured].

[Signature.]

Dated at , this day of , 190 .

NOTE.—This declaration to be made and signed by an individual member of the firm or company invoicing the goods.

3. From and after the passing of this Act there shall be leviable on the several articles mentioned in the Third Schedule hereto imported into New Zealand, and not being the produce or manufacture of some part of the British dominions, duties of Customs equal to twenty per centum of the value for duty as defined by the principal Act, or by any Act amending the principal Act.

4. The provisions of sections two and three hereof shall not be applicable in the case of—

(a.) Goods imported on or before the thirty-first day of March, one thousand nine hundred and four, if it is proved to the satisfaction of the Collector that an order for the goods was sent from New Zealand on or before the sixteenth day of November, one thousand nine hundred and three.

(b.) Printing papers imported by and for the use of the proprietors of any registered newspaper, if it is proved to the satisfaction of the Collector that they are imported under a valid contract for the supply of such papers for a period not exceeding three years, entered into prior to the sixteenth day of November, one thousand nine hundred and three.

(c.) Rails for tramways and other goods mentioned in the Schedules hereto directly imported before the thirty-first day of March, one thousand nine hundred and six, for use in the construction or equipment of any tramway for which plans and specifications have been completed or are in course of preparation on the passing of this Act.

5. The duties authorized under this Act shall be levied, collected, and paid on importation into New Zealand, on or before clearance from any warehouse for home consumption, at the time of making import entry or home-consumption entry therefor.

6. On the importation of any articles mentioned in any of the Schedules hereto, the importer or his agent, in addition to the particulars required by the principal Act to be given on the entry of dutiable goods, shall state, to the best of his knowledge, information, and belief, the country of which such goods are the produce or manufacture, and shall satisfy the Collector, by declaration or otherwise, of the truth of such statement.

7. If a Collector has reason to believe that any goods are not the produce or manufacture of the country stated on such entry, he may detain them for examination ; and if, after due inquiry, he is satisfied that such statement was false, the goods shall be forfeited and dealt with as directed by the principal Act in the case of forfeited goods.

8. With respect to all articles mentioned in the Schedules hereto imported into New Zealand after the thirtieth

day of June, one thousand nine hundred and four,—

(a.) The full duty under this Act shall be payable unless there is produced to the Collector an invoice of the goods having written or printed thereon a certificate signed by the sender or consignor, in such form as may be prescribed by the Commissioner, stating that the goods are bona fide the produce or manufacture of some part of the British dominions named in the certificate.

(b.) No such invoice shall relate to any goods other than those to which the certificate refers.

(c.) Where such goods are imported in packages, such packages shall not contain any goods other than those specified in the invoice, and if any other goods are found in any such package they shall be forfeited.

(d.) Every importer or agent of an importer who produces any invoice or certificate under this section knowing the same to be false in any particular is liable to a fine not exceeding one hundred pounds, or, at the option of the Commissioner, to treble the value of the goods specified in such invoice.

9. (1.) From and after the thirty-first day of March, one thousand nine hundred and four, no duty shall be leviable on tea grown in any part of the British dominions, except on tea packets not exceeding one pound in weight.

(2.) The provisions of sections six to eight hereof shall apply to every importation of tea after the date last mentioned.

10. In any proceeding arising under this Act the onus of proof that any goods are the produce or manufacture of any part of the British dominions shall be on the importer.

11. The Governor may from time to time, by Order in Council gazetted, make regulations for carrying this Act into effect, and may impose fines for the breach of any such regulation not exceeding one hundred pounds.

RECIPROCAL TRADE.

12. Where any country being part of the British dominions reduces or abolishes, or proposes to reduce or abolish, the duty on any product or manufacture of New Zealand, the Governor may enter into an agreement with that country to reduce or abolish the duty on any article or articles the produce or manufacture of such country to an extent that the estimated revenue so remitted shall equal as nearly as possible the estimated revenue remitted by that country :

Provided that no such agreement shall have effect until ratified by Parliament.

13. Where any country not being part of the British dominions reduces or abolishes, or proposes to reduce or abolish, the duty on any product or manufacture of New Zealand, the Governor may, subject to or by virtue of a treaty with His Majesty, negotiate with such country for an agreement with that country to reduce or abolish the duty on any article or articles the produce or manufacture of such country to an extent that the estimated revenue so remitted shall equal as nearly as possible the estimated revenue remitted by that country :

Provided that such agreement shall not have effect or be operative until ratified by an Act of the Parliament of New Zealand.

SCHEDULES.

First Schedule.

CEMENT.

Second Schedule.

Basket and wicker ware, n.o.e., not being furniture.

Bicycles, tricycles, and the like vehicles ; also finished or partly finished or machined parts of same, n.o.e., including weldless steel tubing cut to short lengths.

Boots, shoes, and slippers, n.o.e.; goloshes, clogs, pattens, vamps, uppers, and laces.

Candles.

Carriages, carts, drays, wagons, and perambulators, and wheels for the same.

China, porcelain, and parian ware.

Clocks.

Cordage and rope, n.o.e.

Cream of tartar.

Earthenware, stoneware, and brownware.

Fancy goods and toys.

Firearms, all kinds.

Fish, potted and preserved.

Furniture and cabinetware, n.o.e., and other than iron.

Glass, crown, sheet, and common window.

Glassware ; also plate glass, and glass polished, colored, and other kinds, n.o.e.; globes and chimneys for lamps.

Hardware, ironmongery, and hollowware.

Hops.

Iron nails.

Iron pipes and fittings for same, including main-cocks.

Lamps, lanterns, and lamp-wick.

Musical instruments—viz., pianos.

Paperhangings.

Paper, wrapping,—viz., blue candle, glazed cap, glazed casings, small-hand, lumber-hand, and tissue.

Paper, wrapping, other kinds, including brown, cartridge, and sugar papers.

Plate and platedware.

Pumps and other apparatus for raising water.

Third Schedule.

Bicycles and tricycles, fittings for—viz., rubber tires, pneumatic tires, outside covers, and inner tubes ; rubber and cork handles, and pedal-rubbers ; also drop-forgings and stampings, ball-bearings, weldless steel tube in full lengths, rims, forks, and spokes in the rough.

Gas-engines and hammers, and oil-engines.

Gumboots.

Iron and steel cordage.

Iron, plain black sheet, rod, bolt, bar, and plate.

Printing-paper.

Rails for railways and tramways.

Sailcloth, canvas, and unbleached double-warped duck.

Surgical and dental instruments and appliances.

IRON AND STEEL HOCKEY LEAGUE

THE fourth game of the Iron and Steel Hockey League of Montreal was played on the night of Friday, January 22nd, on the Prince Arthur Rink. The contesting teams were those representing Drummond, McCall & Co., iron, steel and metal importers, and Thos. Robertson & Co., metals and plumbers' supplies. As the score indicates, the game was keenly contested, and was won by Thos. Robertson & Co. only after the keenest kind of contest by the narrow margin of 2 goals to 1. The opposing teams lined up as follows :

Thos. Robertson & Co.—E. Bouchard, goal ; E. Gerow, point ; P. Dunberry, cover point ; H. D. Browne (captain), centre ; H. Orsali, rover ; T. Robertson, right wing ; T. R. Lessard, left wing.

Drummond, McCall & Co.—J. Gouldthorpe goal ; K. Andras (captain), point ; R. Tait, cover point ; L. A. Holland, centre ; A. Brophy, rover ; H. O. Wilkinson, right wing ; L. Martel, left wing.

Umpires—F. C. Mavor and Thomas B. Reed.

Timekeepers—W. H. Tait and W. J. Todd.

Referee—A. R. Vallance, of Westmount.

The Manitoba Builders' Supply Co., Winnipeg, have been incorporated with a capital of $45,000.

THE DOMINION CRUISER.

THE Polson Iron Works, Toronto, are at the present time engaged in the building of the Dominion cruiser for fiseheries protection on Lake Erie. The new cruiser will be a flush deck vessel having a ram bow and elliptic stern of somewhat similar type to the smaller cruisers in the Britsh navy. She will be faster than any fishing tug on the lakes.

The hull of the cruiser will be of open hearth, mild steel. The dimensions are: Length on load water line, 176 feet; beam. molded, 22 feet; depth from top of keel to top of main deck, 14 feet 3 inches; draught, loaded with 50 tons of coal, 8 feet; bunker capacity 75 tons. The vessel will have eight watertight bulkheads.

She will be fitted with two sets of triple-expansion engines, having cylinders 13 1-2, 22 and 36 inches diameter by 21-inch stroke. The steam will be supplied by two Scotch boilers, 11 1-2 feet in diameter and 13 feet long, built for a working pressure of 200 pounds, and fitted with forced draft. Of auxiliary machinery she will have a steam steerer of ample capacity, a complete electric light oufit, including a powerful searchlight. The work will be entirely the product of the Polson Iron Works' staff, and when completed will have a very handsome appearance.

NEW ZEALAND FLAX FOR CANADA

Some considerable quantity of New Zealand flax is now used in Canada for the manufacture of binder twine. Up till recently the fibre has been going to Canada by way of London, but owing to the low freights now quoted by the Canadian railway companies and the steamers trading to Vancouver from Australia, most of the material is being sent to Vancouver by way of the South Pacific. Recently a firm shipped from Wellington 450 bales to Sydney for transhipment to the next steamer for British Columbia, and a week later the same firm despatched another lot via Auckland and Fiji to catch the same steamer.—Textile Mercury, Manchester.

THE FUTURE SALESMAN.

When the head of a big western manufacturing concern was asked wherein the salesman of the coming ten years would differ from the salesman of the past or of to-day, he said :

"Sobriety, a great capacity for work, physical endurance and keeping everlasting at it will mark the successful salesman of the future. There are many salesmen to-day who possess those qualities. I think conditions will demand more of them in the future."

Another said :

"It is becoming a difficult problem. Where we find one man that will work hard, who will do everything in his power to make the best of his possibilities we find nine who fail to come up to this standard. The whole solution of the salesman problem in the future lies in that word 'work.' To-day there are too many men who are doing other things when they ought to be selling goods."—Stoves and Hardware Reporter.

WINNING THE FARMERS' FAVOR.

Hardware dealers who are enterprising and who expect manufacturers who do business through them to be the same. will appreciate the progressiveness of the International Stock Food Co., Toronto, who offer a cutter or wagon to dealers who make a special effort to win the trade of farmers and stock raisers. Dealers are invited to write the company for literature and for the particulars of this unusual offer.

THE COLONIAL STOCK FOOD CO.

Attention is called to the announcement in this issue of The Colonial Stock Food Co., of Toronto. The policy of this company in assisting the sale of their brand of goods is to work in conjunction with the retailer all the way through, rather than by general advertising. They quote low figures to the retailer, thus enhancing his profits, and then, by a follow-up system of mailing cards, accompanied by samples of their food, sent out to possible consumers, the names of which the retailer provides, there is developed a demand for the food that it is hoped will be permanent. The Colonial Stock Food Co. believe that their advertising methods are better for themselves and for the retailer than if they spend money in local newspaper advertising.

A LARGE ORDER OF BRUSHES.

The United Factories, Toronto, are steadily extending their connection in the Northwest. Last week they shipped a car of brushes to Winnipeg, and they expect to send another car this week. The magnitude of this order, the largest they have ever had from the West, can only be understood when one considers what a great number of brushes is necessary to make up a car.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

SITUATIONS VACANT.

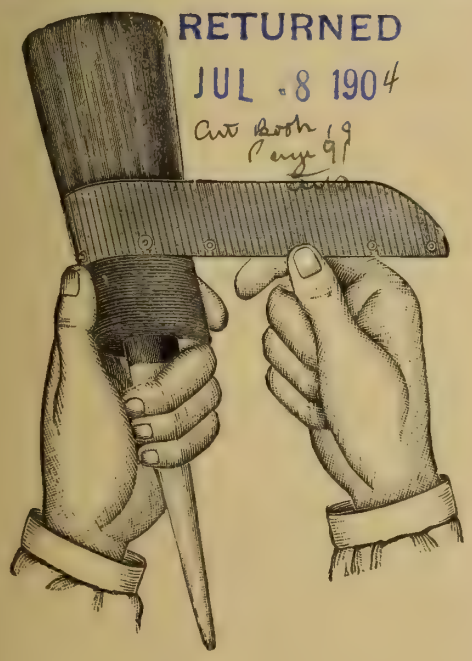
Holds almost 3 lbs.
2-doz. 50c. pkgs., @ 4.00 doz.
Holds 6 lbs.
25-lb. Pails, - @ 1.30 each.
Retails for 2.25.

The Colonial Stock Food Co. makes Poultry and Stock Foods that are positively the best made in America, proved by use. These foods are advertised direct for the retailer by the Company making them, by special literature addressed to a list of users supplied by the retailer. No costly newspaper advertising for which the retailer pays. Colonial Stock Foods pay generous profits. One agent to a town. How about your town?

THE COLONIAL STOCK FOOD COMPANY
TORONTO.

Want Trade?



If so, you doubtless realize that the goods must be the best of their kind in quality and workmanship. This is especially true of Paint Brushes. For nearly half a century

Boeckh's Toronto,
and Bryan's London, Brushes

have been upon the market. They are in the very front rank as ready sellers because their manufacturers' highest and constant aim is to please both dealer and purchaser. Larger facilities in making now enable us to manufacture better goods than ever, and at lower prices, with the widest margin of profit to dealers.

PAINT, OIL AND BRUSH TRADES

Prospects Bright in Paint Trade.

ALTHOUGH January is ordinarily reckoned a quiet month in the paint trade there are indications that business this month among the manufacturers and jobbers is very satisfactory. A Montreal manufacturer the other day showed a representative of "Hardware and Metal" a sheaf of orders from his agent in an Ontario city aggregating over $1,100 in a single day. This total was not swelled by one or two exceptionally large orders the equal of which might not be secured for another month or two. It was made up of a number of moderate orders such as might be placed any day during a brisk season. Moreover these orders were not placed for white lead, the present low prices of which might be expected to induce large buying. We noticed only one hundredweight of lead in the whole list. The orders were for general painting supplies, varnishes, shellacs, and prepared paints. A number of orders were from industrial establishments such as carriage and implement works, and the balance were from retailers who are looking ahead and are already planning an active paint campaign next Spring.

There is good reason to believe that the experience of this manufacturer is not exceptional. From other manufacturers come reports of an unusually satisfactory January trade and of the receipt of enquiries from all parts of the country. The outlook is very promising. If the manufacturers can come to some agreement to stop the present ruinous competition in staple lines the season of 1904 should be a money maker.

Glass Trust in Belgium.

WORD comes from Charleroi, Belgium, that a Belgian glass trust has been formed, says Richard Guenther, U.S. Consul General at Frankfort, Germany. This is the result of propositions made to Belgian glass manufacturers about two years ago by an American syndicate which wanted to acquire all the Belgian glass works at a certain price, allowing the Belgian manufacturers an interest in the new enterprise. Now the Belgians have determined to exclude the Americans and to leave it to a committee to fix prices and distribute orders for a term of six years as a starter.

If this is a success then the glass manufacturers will form a company with a capital of 60,000,000f. ($11,580,000), of which a part will be distributed among the members, the other part to be used as working capital. The association is to be subject to the determinations of a committee with reference to selling prices, purchasing raw materials and fixing wages. The by-laws of the association have met with the approval of all the manufacturers except one.

Other industrial circles urge interested parties not to place too high hopes in this trust plan, for, as formerly, the selling prices will be influenced by German, French, Italian, English and American competition. If the result would be to get better prices in Belgium similar enterprises would be created competing with the trust.

The German glass works some years ago established a single sale station and accomplished a rise in prices for the home demand. Then the Belgian company "Glass Nationale Belges" established works at Porz-Urbach, near Cologne, which successfully competed with the German glass syndicate.

A new American mechanical blowing process is furthermore likely to cause a complete revolution in the entire mode of manufacture, which may affect the business of the proposed trust. It is easily comprehended, the correspondent states, that the owners of glass works are looking for ways and means to escape the "tyranny of the socialistic labor unions," but whether this will be accomplished by this trust is yet greatly doubted.

Thomas Edward Lucas.

A FINE tribute to the memory of the late T. E. Lucas, Philadelphia, is paid in the following references made to him in a letter from John Lucas & Co., paint manufacturers :

"It is with deep regret that we announce to our friends, to the trade in general, and to his many old friends in particular, the death of Thomas Edward Lucas, nephew of the late founder of the house. He was taken ill on New Year's Eve, and, after a brief week, succumbed to the attacks of pneumonia on Saturday, January 9.

"Mr. Lucas was born in Stone, Staffordshire, England, October 27, 1849, arrived in America April 15, 1869, and was for several years employed at the Color, Paint and Varnish works, located at Gibbsboro, New Jersey. In 1873 he entered our Philadelphia office, where he was gradually advanced to the posi-

Hollywood Paint

Paste---Ready Mixed---Floor

Since notifying the trade 1st of this month that we have secured the exclusive sales agency in Canada and Newfoundland for this celebrated brand of paint, we are daily in receipt of letters from Merchants who have been handling it, advising us that they are well pleased with the agency and would not like to loose it. Here are samples of what they say :

"I anticipate a good season, have great faith in the Paste Paint. I have sold a great deal of————————make, but it is not in it. I am better satisfied now."

"Have worked up a big trade, customers well satisfied, and do not wish to loose the agency."

Be wise, secure the agency in your town.

tion of the head of the Order Department. In business, Mr. Lucas was always loyal to the motto of the firm, 'Look well to the end.' He set a high example to those associated with him for diligence, faithfulness and thoroughness. Socially inclined, he will be sadly missed by all who had the good fortune to know him personally and to enjoy his open-hearted and general hospitality.

"It is a worthy record for any man to have maintained faithfully and loyally the duties and responsibilities of a position to the entire satisfaction of his employers for 35 years, and we gladly take this opportunity to record our deep and sincere appreciation of his faithfulness."

Paint and Oil Markets.

MONTREAL.

A typographical error last week made us quote 96 3-4c. instead of 95 3-4c. for turpentine in single barrels; and 95 3-4c. instead of 94 3-4c. for 2 to 4 barrels. Since then the market went up to 96 1-2c for single barrels and 95 1-2c. for 2 to 4 barrels, and showed an upward tendency until Wednesday, 20th inst., when there was a sudden drop of 3 1-2c. all round. At present the cause of the reaction is hard to find, though it is doubtless due in great measure to the unprecedented high prices under a very small demand. Whether it will lead to further reductions or not it is impossible to say. Turpentine is still the same uncertain quantity it has been for the past two months. Linseed oil remains steady under a light demand for immediate delivery, but many dealers are taking advantage of the low prices to order for forward supplies. There is plenty of linseed oil to be had, but manufacturers are loath to meet prices, especially since in some cases there is danger of these being cancelled in case of a drop in the market. In white lead there is some improvement in the demand, Spring business commencing to open up. There is little else to note in this item, except that there is perhaps less cutting as dry white lead is held firm in the Old Country, and with the Spring demand coming on an element of firmness is imparted to this market. As usual at this season of the year there is more or less inquiry for Paris green, which is quite steady, and orders are being placed in moderate quantities. The demand for paints from country points is, however, small, on account of the" blocked roads, delayed mails and snow-bound customers " as a doleful dealer puts it. This, however, does not hinder the factories from operating to the fullest extent. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Red Leads.—Genuine red lead, in casks, $4.25; in 100-lb. kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge.—Ground, casks, 5c.; in less quantities, 5 1-2c.; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47c.; 5 to 9 barrels, 46c.; boiled, 1 to 4 barrels, 50c.; 5 to 9 barrels, 49c. Delivered in Ontario between Montreal and Oshawa at 2c. per gallon advance.

Terms 2 per cent. 30 days; 90 days net.

Turpentine—Single barrels, 93c.; 2 to 4 barrels, 92c. Standard gallon of 8.6 pounds. Terms 2 per cent. 30 days; 90 days net.

Benzine.—25 to 26c.

Shellac Varnish.—Pure white, $2.60 to $2.80; pure orange, $2.60 to $2.80; No. 1 orange shellac, $2.40 to $2.60.

Mixed Paints.—$1.20 to $1.40 per gallon.

Castor Oil.—8 3-4 to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15 1-4c; 1-lb. packages, 16c.; 1-2-lb. packages, 18c.; 1-lb. tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green.—50 and 100 lb. drums, 15c. per lb.; 25 lb. drums, 15 1-2c; 1-lb. paper boxes, 16c.; 1-lb. tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

TORONTO.

Turpentine is still the centre of attention. The Southern market has manifested an unexpected weakness, a small reduction in price having resulted since our last report. Local jobbers are confident of higher prices, however, and are disposed to keep up their quotations unless the present weakness in the South is maintained. Paris green quotations are also attracting attention. Manufacturers seem disposed to keep prices at unchanged figures, but the jobbers are still selling 1c. below these prices. The sales seem to be small. Less disposition to cutting is manifested in white lead, but there is not much doing. Linseed oil is advancing in Chicago but as the British prices show no change local prices are but steady. Other lines are unaltered with business quiet.

White Lead—Ex-Toronto, pure white lead, $4.75; No. 1, $4.30; No. 2, $4; No. 3, $3.60; No. 4, $3.35 in packages of 25 lb. and upwards; 1-2c. per lb. extra will be charged for 12 1-2-lb. packages; genuine dry white lead, in casks, $4.87 1-2.

Red Lead—Genuine, in casks of 560 lb., $4.25 to $4.50; ditto, in kegs of 100 lb., $4.75; No. 1, in casks of 560 lb., $4;

Litharge—Genuine, 6 to 6 1-2c.

White Zinc—Genuine, French V.M., ditto, in kegs of 100 lb., $4.25.
in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c. per gallon.

Paris White—90c. to $1 per 100 lb.

Whiting—60 to 65c. per 100 lb.; Gilders' whiting, 75 to 80c.

Shellac—Pure orange, in, barrels $2.45; white, $2.60 per gallon; No. 1,

ADVERTISING

is a great help to the dealer in selling ready-mixed paint, but unless the quality of the paint is the best, the advertising counts for nothing. A customer will shun a store that supplies inferior goods, after they have been loudly advertised.

ANCHOR LIQUID PAINT

is not only advertised well, but the paint itself is unsurpassed. It is the only one in Canada containing the world famous white lead—BRANDRAM'S B. B. GENUINE. Our thirty years of experience should count for something, and with us it does.

WINDOW GLASS.

MONTREAL.

There is some improvement in the demand for glass since last week, and a fair amount is now moving out. There have been no changes in prices. We quote as follows: First break, 50 feet, $1.70; second brake, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

Business for import is getting well under way. Prices are steady at a basis slightly below that of last season. Stock prices are irregular as cutting is frequent, but nominally there is no chance. We quote: Star, under 26 in., $3.10; 26 to 40 in., $3.30; 41 to 50 in., bookbinders', ground, 10 1-2c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

THE PASSING OF THE BROOM.

AN ingenious and portable air-pump will probably take the place of the old-fashioned broom in house-cleaning operations. The carpet renovators are of various sizes, ranging from 12 to 36 inches in width. They consist of a steel framework which lies flat on the surface of the fabric. This is termed a hood, and contains an expanded nozzle connecting with the hose. In the bottom of the hood is a slot about 1-100 inch in width, through which the air passes in what might be termed a sheet. It is forced into the fabric at various pressures, according to the thickness of the latter and the amount of dirt which has accumulated. The usual pressure varies from 60 to 70 pounds to the square inch. This is sufficient to blow the dirt out of and from under the covering. It passes upward through two other slots into the hood, as it cannot escape outside of the machine on account of the weight on the surface. It is prevented from escaping into the air by a cloth bag which collects it, but is loose enough to allow the air to pass through. The dirt settles into a pan especially designed to collect it. When filled, this can be readily removed, by taking off the bag, and emptied. To the renovator is attached a handle for moving it over the floor. The handle also acts as a conduit for the compressed air, the supply of which is regulated by an ordinary valve. The apparatus is usually pushed over the carpet and does its work so thoroughly that it will remove any kind of substance which can be driven out by air pressure. In several instances flour was thrown upon a rug and trod in with the feet. When the renovator was applied it apparently collected every particle of the flour, none escaping into the air.

In treating lambrequins and other kinds of upholstery the hose is connected with a jointed steel tube long enough to extend to the upper portion of the apartment. The ordinary air blast is directed against the draperies and the dirt is allowed to settle upon the floor and furniture. Obviously the draperies and upper portions of an apartment are the first cleaned, then the furniture and floor covering. For removing the dust from upholstered chairs, sofas, and other kinds of furniture, what might be called a hand renovator is employed. It is constructed on the same principle as the larger type with the slots for applying the air pressure and collecting the dust, and is pushed over the surface by hand. If the chair, for example, is stuffed with cotton or some other material, more power is employed to force the air through this material as well. As already stated, even billiard table coverings are thoroughly cleaned of the chalk and dirt in the same way. In freeing such articles as pillows and mattresses a simple pneumatic needle is used, the air being injected with sufficient force to circulate among the feathers, straw, or other stuffing and expel the dust which may have collected.—Scientific American.

The commissioners who are to investigate the process of mineral smelting by electricity left a few days ago for Europe.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITICISM

Edited by **John C. Kirkwood,** TORONTO.

NOTE—Hereinare discussed the principles and practice of advertising. Subscribers are invited to send Mr. Kirkwood specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

ADVERTISING THAT MISSES THE MARK.

I REPRODUCE this week two examples of hardware advertising which illustrate two distinct conceptions in the treatment of space. I do not mean to deal with the general make-up or setting of the advertisements ; only with the matter. In example No. 1 the text matter is very brief, and is confined to one subject,—stoves or ranges. "The Welcome Range" and "The Steel Chancellor Range" are named, the price being quoted on one but not on the other. The relative merits of these two ranges are not stated, neither are their individual points of excellence. Herein lies the weakness of what would otherwise be a very fair advertisement. The advertisement conforms to many of the requirements of good advertising, but falls short in others. What, for example, is there in this advertisement to inform a possible customer, to educate, to influence, to help to a decision ? There is absolutely nothing. It conveys a certain amount of information, but a very small amount it must be admitted. The writer of the advertisement knows a great deal about the relative merits of these two ranges, and he will use this knowledge in selling ranges to any who call. But the object of the advertisement is to lead the possible buyer to call, and the surest way to attract a customer is to inform him on as many points of merit as possible, and to create a desire to know more. I can easily imagine a competitor's advertisement of similar purport in which there is given a satisfactory description of the range or ranges he is handling, together with a statement of prices, and I have no doubt whatever as to the result :—the man who told most, whose advertisement answered the questions that every range buyer asks, would create the best impression, and, other things being equal, would almost certainly get the sale. To write a good advertisement is not hard if the proper requirements are kept foremost in the writer's mind ; namely, what is desirgble for the buyer to know, and why the buyer should purchase from the advertiser.

In example No. 2 the identical subject is dealt with—stoves or ranges. The writer of this advertisement is, I would say, a student of advertising. He writes fluently and well. His style is that of many professional advertisement writers. He talks up the question of stove-buying in a sympathetic strain and states the matter from the buyer's point of view very aptly. The writing, I am disposed to say, is too good, a little too nice, too well-sentenced and balanced. It is not the language of trade ; it savors of effort, of being an essay. And there is too much of it. It is not a convincing reason for having everybody's stove to say that the Weichel store has sold this year twice the number of ranges that have been sold by any other dealer. If this be a fact, it is a useful fact, but it is not a reason. It is a fact that can be handled effectively, but it is not sufficient in itself for expecting the business of the man or woman who has yet to buy a range. Had Weichel & Son abbreviated this general talk on ranges, making it an introduction to a specific statement regarding the stoves and ranges they sell, it would have been much better. An entertaining, suggestive introduction to an advertisement is to be commended, but care must be taken to make it short. The heart, the centre, the vitals of the advertisement lie in the definite description, not in the chat that precedes. Had the writer of Weichel & Son's advertisement followed up a brief introduction by descriptions of two or three lines of ranges and heaters, making these as accurate and satisfying as can be done in few words, a really good advertisement would have resulted.

Neither of these advertisements can be said to be dull. They emanate apparently from live stores. The air of business is about them. Yet each fails in the crucial test of information—that information that is the right of every desired customer to know and have.

Watch This Space

Later on, but keep your eyes open when you buy a stove.

Example No. 1.

A Hint in Need Is a Hint Indeed...

We believe there are many homes in Elmira and vicinity, in which, the first few weeks of steady cold weather have rendered it all too evident that a new RANGE or HEATER will soon have to be bought to replace the old one. Doubtless, in many such cases, the purchase would have been made ere this, had the would-be purchaser been able to determine which among the many excellent makes upon the market would most fully meet his needs. The purchase of a stove is a most important matter. It is no wonder that many people shrink from making the final unalterable decision. But we wish to point out to you one very significant point which ought to have some influence on your decision, namely that the Weichel Store has sold for several seasons past and is selling this year twice the number of Ranges, Heaters, put out by any other store in town. Trade, like water always finds its level. The greatest volume of trade is bound to centre at the store whose range of styles and sizes is widest, whose values are strongest, and whose prestage is highest. Need we say more? A hint in need is a hint indeed.

M. Weichel & Son

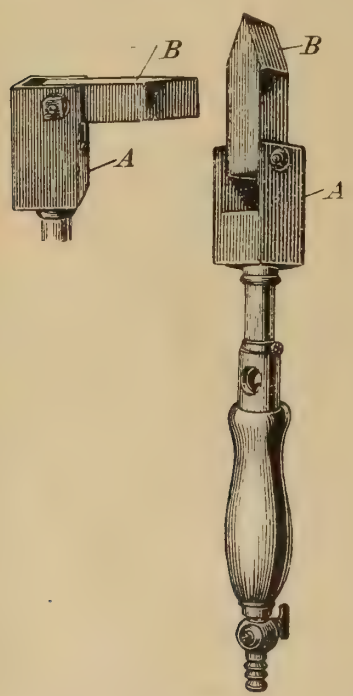
ELMIRA and WATERLOO.

Example No. 2.

STOVES AND TINWARE.

New Soldering Iron.

CONSUL MONAGHAN, Chemnitz, Germany, reports that an extremely practical gas soldering iron was recently placed upon the Berlin market. As is apparent from the illustration, the copper bit is movable and can be placed at any desired angle. By virtue of this construction the iron is of great convenience in soldering metallic edges so located as to be difficult of access. The heat generated by the gas flame (Bunsen burner) is utilized to its fullest extent in that the hollow part (A) prevents rapid radiation and concentrates the heat upon the copper bit (B). This system of heating develops a sufficiently high temperature to permit of the employment of a com-



paratively small piece of copper in the bit and also economizes in the amount of gas consumed. It is reported that a soldering iron of this kind which does the work of an ordinary soldering iron possessing a copper bit weighing 800 grams, consumes but 102 liters of gas per hour, which, according to the prevailing price of gas in Berlin, represents a cost of from 3 to 5 cents per 10 hours. The size of the flame can be regulated at will and the apparatus attached to any gas jet by means of a hose and operated without the employment of a bellows. The short length and comparatively light weight of the iron makes it a most convenient and handy tool to manipulate.

Points on Furnace Selling.

In a booklet issued by the International Heating Co., Utica, N.Y., are the following hints: "A line of furnaces can be made to add materially to the attractiveness of a store. As a general rule, and unless a large number are exhibited, the samples should not be cased, or at least only the lower casing put in place, for in that way the working parts can be seen and the details explained. It gives an opportunity to explain how the joints are made, how thick and heavy the fire pot and radiator are, and all the finer points that make that particular sample the style of the best possible heating apparatus for that particular cusomer. A sample attractively decorated adds materially to the exhibit; black asphaltum varnish, gold or aluminum bronze, a paint brush or two and a little time and attention, will make even ar ordinary furnace attract attention. Occasionally we see a rusty, dilapidated, disreputable assemblage of cast and wrought iron standing outside the furnace dealer's place of business, doing duty as a sign that he puts in furnaces. It may attract attention, but its appeal to the public is more than likely in the interest of a possible competitor—perhaps in the next block."

Heating Street Cars.

Here is a suggestion from the Stoves and Hardware Reporter with which all heating experts will agree: "There is a chance for some man of genius to invent a system of heating trolley cars, one that will heat. The majority of those now in vogue—when used at all, as they are not often in St. Louis—are of the nature that when on at full blast make a man squirm in his seat with thoughts of a red hot stove under him, while he drums the floor to keep his feet from freezing. What is needed is a system of heating that will send the heat to the floor first. If this has ever been discovered the road has not been found public spirited enough to introduce it. There are doubtless many stoves possessing that excellent quality but the electric lines are generally discarding stoves, evidently without any increased benefit as far as an adequate and correctly distributed system of heating is concerned."

Have you tried it?

HEATING AND PLUMBING

TO GUARD AGAINST HEATING ACCIDENTS.

THE fatal explosion of the heating boilers at the Wolseley Barracks, London, Ont., has lead the Canadian militia authorities to take precautions to provide against the repetition of such an accident. Orders have been sent out to the officers in charge of military buildings in which heating systems are installed as follows:

(1) A responsible person must be placed in charge of the system, which he must thoroughly understand.

(2) To fill the system, open all the air valves in radiators, also turn on cock in supply pipe at expansion tank and close cocks in emptying pipes at furnaces. Close air valves, beginning at lower radiators, as soon as the water runs freely through them.

(3) To empty system, close cock in supply pipe at expansion tank, open cocks in emptying pipes at furnaces and then open all air valves commencing at top raidiators.

(4) Never light the fires in the furnaces until the system is full of water, and main flow and main return valves at furnaces are wide open. It is most important that the main flow and main return valves must never be closed when fires are lighted in furnaces.

(5) After furnaces are lighted, air valves in radiators must be gone over again, commencing at lower radiators and working upwards.

(6) Radiators must never be left shut off; as there is always danger of freezing.

(7) All pipes, in places exposed to frost or severe cold, must be carefully covered and protected. Windows in such places must be securely fastened especially in rooms unoccupied or little frequented.

(8) It is important that the expansion pipe to expansion tank is never allowed to freeze or become choked, as there would then be danger of the system bursting.

(9) Ashes must never be allowed to collect under fire pot. If this is attended to, grates will not burn out for many years.

(10) If any part of the system does not heat properly, first try air valves, then, if the radiators are turned on and there is no air in them, and the system still does not heat, a steam fitter must be sent for.

(11) In case the expansion pipe should become choked, and the water in the system should boil, open the cocks in emptying pipes at furnaces, dump the fire and close the cock in the supply pipe at expansion tank.

(12) In case a radiator or pipe in any part of the system should burst, and the system must be emptied in order that repairs may be made, see instructions item 3.

(13) All flues and spaces between sections in furnaces must be kept perfectly clean with brush and scraper provided for the purpose, otherwise the system will not heat properly.

(14) The person in charge of the system must go over it carefully every day, and try all air valves, see that all radiators are circulating and in proper condition, commencing with lower radiators. The expansion tank must also be examined.

(15) The furance room must be visited, twice daily, at irregular periods, and it is important that flues and sections are clean and ashes removed from under fire pot. In mild weather a small fire is all that is necessary.

(16) In all systems, where the furnaces have main flow and main return valves, they must be connected with a chain and padlock, in order that they may not be tampered with. The person in charge of the system must have the custody of the key and will be held responsible for it.

"Sirdar" Water Boiler.

THE accompanying illustration shows the "Sirdar" water boiler, which Thomas Robertson & Co., of Montreal, are finding very popular among the trade this season. They have secured the right to manufacture these boilers in Canada, and are therefore in a position to offer the Canadian trade a superior line of these goods of very attractive design.

In the construction of these boilers the manufacturers have aimed at presenting the greatest amount possible of effective fire surface in direct contact with the fire. On this account, the fire-pot is constructed with deep corrugations around and overhanging the fire, presenting fully one-third more fire surface, backed by water, to the direct radiant heat of the fire, than if constructed without these corrugations. This statement may easily be verified. The circumference of a circle 18 inches in diameter is about 56½ inches, whereas, on account of these corrugations, the actual circumference of the 18-inch fire-pot is 71 inches. The corrugations also provide for the free circulation of air at the edge of the fire, ensuring perfect combustion. Moreover, the boiler is so constructed that the water rises in the centre over the hottest part, thus ensuring direct results from the heat of the fire. The design of the upper sections is ingenious. The flues are staggered, so that the products of combustion in passing from one section to another must impinge upon every part of the under side of each section as they pass through to the smoke pipe.

Another feature to which the manufacturers always direct special attention is the fact that the sections are connected by cast iron milled nipples, and hence no packing or gaskets are required. The nipples are of the same material as the boiler, and hence equal contraction and expansion is ensured.

Every boiler is tested before it leaves the works to 80 pounds hydrostatic pressure. Every part of it is easily accessible for removing soot and dirt, and

can be easily cleaned in a very few minutes while in operation. It is also provided with an anti-clinker rocking and dumping grate, which may be operated with the greatest of ease, and, in case any part should give out, it can be readily removed and repaired.

Lastly, it should be noted that the "Sirdar" boiler is very conservatively rated, and many purchasers have testified that the results obtained are much more than are claimed for it. Consequently, although Thomas Robertson & Co. manufacture a frame which can be attached to the portable boilers, for brick setting, and although the results are satisfactory, both as regards appearances and in accomplishing the end desired, yet as the boiler is most conservatively rated, they are confident that it will give excellent satisfaction without need of the extra expense entailed in brick-setting, and in most cases they do not advise this expenditure.

RAMSAY'S PAINTS TO PAINT HOUSES

You are in business for profit, so are we.

A poor line of goods may bring you one profit, but will never bring another.

Can't we sell you a "pure" line of goods?

RAMSAY'S PAINTS

stand for purity, first quality, good sellers, good profits.

We help you sell the goods — that brings you trade for other goods as well.

Try Ramsay's Paints for 1904 — the right paint at the right price.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE Canada-South Africa Lumber and Produce Co., Montreal, have been incorporated with a capital of $50,000, to carry on the general business of saw millers and timber dealers. The directors are G. A. Campbell, J. W. Macdougall, O. R. Pease, L. Skaife and A. E. Abbott, all of Montreal.

It is said that the development of the natural gas industry in the vicinity of Welland, Ont., has boomed greatly during the past year. New discoveries during 1903 have extended the field considerably, and consequently, the period of production has been prolonged.

The Western Canada Land and Colonization Co., Toronto, have been incorporated with a capital of $500,000, to deal in real estate and mortgages. The directors are R. W. Langmaid, W. J. Bragg, W. C. Ashton and J. Langmaid, all of Durham County; L. E. Annis, York County; and T. Trealeaven, Ontario County.

It is reported from Amherst, U.S., that the Joggins mines have been closed down indefinitely on account of the decision that the mines are not safe to work in because of the escape of fire damp from the lower level. The best course open was to flood the mines, and this has been done. This operation will occupy at least six or seven weeks.

The Martin Piano Co., Peterborough, Ont., are proposing to move their plant from Peterborough to Ottawa. The Ottawa civic authorities are taking steps to encourage this move on the part of the piano company, and are also granting The Lank Tanning Co. certain privileges for the establishment of a tanning industry on the bank of the Rideau.

The annual meeting of The Laprairie Brick Co., Montreal, was held recently and the following were elected directors for the ensuing year: Peter Lyall, J. W. Tester, J. A. Trenholme, A. A. Ayer, Paul Galibert, John McKergow and John Forman. It was stated that there had been some difficulty in making arrangements for the extension of their plant at Laprairie.

Two thousand acres of land in the immediate vicinity of the Canadian Power Works has been sold to American capitalists, the chief of whom is A. J. Wright, of Buffalo. It is understood that most of it will be held for factory sites. The price paid was nearly $500,000. It is reported that The Toronto & Niagara Power Co. have purchased 45 acres in the same vicinity for $35,000.

The management of The Dominion Iron & Steel Co. is now engaged in rounding out its plant, and hopes to be in a position in the Spring with a completed plant to manufacture rails, structural steel and practically every form of finished product for which there is a market in Canada. It is said that the Dominion will be the principal market for the products of the company in the future.

Windsor has lost an industry. The Walkerville Wagon Co.'s plant and business have been sold to a company of capitalists of West Lorne, Ont., and the plant will be moved to that place. It is reported that The American Stove Co. will acquire the buildings to be vacated by the wagon company. Seventy-five men were employed in the wagon factory, so that it will be no slight loss to Windsor.

The People's Natural Gas Co., Dunnville, Ont., have been incorporated with a capital of $100,000, to construct and maintain works for the production and distribution of electricity and natural gas for lighting, heating and power purposes. The directors are J. Brown, F. J. Ramsey, R. A. Harrison and F. R. Lalor, all of Dunnville; H. Ockshutt, W. J. Aikens, both of Brantford; and H. Eagle, of Attercliffe, Ont.

It is reported that an important tin deposit has been discovered in Alaska. If this deposit proves to be extensive it will be of great importance to North America, since up to the time of the discovery, the Western Hemisphere was thought to be destitute of that metal. Tons upon tons of tin are imported annually into Canada and the States from European countries, and therefore the importance of such extensive tin deposits in Alaska can be readily understood.

A new asbestos company, known as The Sclater Asbestos Co., have been established at Montreal by Canadian and American capitalists. This company will be the distributing agents for Canada of Keasbey & Mattison Co., Ambler, Penn., and they will carry a stock valued at from $75,000 to $100,000. The manager of the company will be Wm. Sclater, who resigned the position of president and manager of The Canadian Asbestos Co., to take over the management of the new company.

NOTES.

The annual general meeting of the Canadian Mining Institute will be held in the King Edward, Toronto, on the 2nd, 3rd and 4th of March.

Two new saw mills have recently been constructed in St. Agnes, near Quebec, and will probably be put into operation towards the end of February.

The Frost Wire Fence Co., of Welland, Ont., have decided to move their plant to Hamilton, that city agreeing to give them a fixed assessment for 10 years.

The Imperial Plumbing and Building Co., Winnipeg, have been incorporated with a capital of $20,000, to carry on the business of plumbers and builders.

The report of the finding of very extensive deposits of nickeliferous copper at Cheticamp, in the northern part of Cape Breton, have been confirmed officially by the Provincial Department of Mines.

Five of the open-hearth furnaces of The Dominion Steel Co., which were closed down a few weeks ago for repairs, have been relit and are now in full operation. Graham Fraser is hustling work.

A shipment of five tons of gypsum has been forwarded from Clarksville, Hants Co., N.S., to Halifax, to be tested. It is said to be of good quality. If it proves so Clarksville will have shortly a big gypsum industry.

Apartments, Limited, Toronto, Ont., have been incorporated with a capital of $200,000, to deal in real estate and mortgages. The directors are J. S. Lovell, Wm. Bain and E. W. McNeill, all of Toronto.

The engineers' report on the Temiscaming Railway extension, to be presented to the Ontario Legislature during its present session, show that no great engineering difficulties will be met with in the proposed extension.

The Goderich Planing Mills, Goderich, Ont., have been incorporated with a capital of $40,000, to manufacture and deal in lumber of all kinds. The directors are J. T. Goldthorpe, John Lawson and Jas. Buchanan, all of Goderich, Ont.

The report of W. E. Carter, of the Bureau of Mines, shows that there are vast stores of peat in the Province of Ontario undeveloped. The development of the peat fuel industry would surely greatly relieve the present fuel situation in Ontario.

TORONTO MASTER PLUMBERS MEET.

THE monthly social meeting of the Toronto Master Plumbers' Association was held in the association rooms on Monday evening, about one hundred members being present. The meeting had been placed under the care of R. Harrison, of Harrison & Robertson, who prepared a most attractive programme of music and speeches.

The chief feature of these monthly meetings, apart from the social element of them, is an address prepared by the chairman of the evening. Mr. Harrison's address was devoted to the heating branch of the trade, and was a most practical paper. "Hardware and Metal" hopes to publish it in detail in next week's issue. Representatives of the various jobbing houses of Toronto were present and contributed in their usual hearty manner to the enjoyment of the evening.

BUILDING PERMITS ISSUED.

TORONTO.

Mrs. Jas. Claxton, erection of brick dwelling on Shaw street, to cost $3,000.

H. H. Halls, a two storey brick residence on Harvard avenue, to cost $3,000.

J. T. V. May, two detached brick dwellings on Delaware avenue, to cost $3,500.

B. H. Morehouse, a pair semi-detached brick dwellings on First avenue, to cost $3,600.

Frank Hillock, a two storey and attic roughcast dwelling on Dufferin street, to cost $1,200.

Chas. and Thos. Lawden, a two storey brick veneered dwelling on Leslie street, to cost $2,000.

Christopher Robinson, K.C., a one storey brick dwelling on Queen street west, to cost $2,500.

Hogg & Co., a pair of semi-detached two storey brick dwellings on Smith street, to cost $3,600.

Mr. Jackson, a two storey frame and brick veneered dwelling on Dufferin street, to cost $3,000.

Ryrie Bros., three-storey alterations to shop on south side Adelaide street near Yonge, to cost $2,500.

Mr. Hopkins, a two storey brick addition and verandah to dwelling on Carlton street, to cost $1,500.

Andrew Duff, a pair semi-detached two storey roughcast dwellings south side of Wright avenue, to cost $2,100.

BUILDING NOTES.

A new Presbyterian church is to be erected in Regina, N.W.T.

A new Presbyterian church is being erected at Mill Creek, near Winnipeg, Man.

The town of Sydney, N.S., is considering the proposition of erecting a large civic gas plant, to cost $75,000.

Tenders are being asked before February 17 for a Y.M.C.A. building at Springhill, N.S. Address R. H. Cooper, Springhill.

Tenders for The New England Fish Co.'s wharf, Gore avenue, Vancouver, are asked. All the piles are to be treated with carbolineum.

Holland Munson's large saw mill at Bay Mills, near Sault Ste. Marie, Ont., has been destroyed by fire. The estimated loss is between $250,000 and $300,000.

J. F. Brown, architect, Toronto, is preparing plans for a new Presbyterian church building at North Bay. Mr. Brown is also taking tenders for a Summer cottage at Scarboro.

A first-class brick hotel is to be constructed by The Hotel Cecil Co., in Kamloops, B.C. There will be three storeys above the basement in the building, and there will be 35 bedrooms, a large dining hall, private dining room, and a ladies' drawing room.

Chadwick and Beckett, Toronto, are getting out plans for a modern brick and stone residence for J. Henderson, Crescent road, Toronto. They have also taken a contract for alterations to the premises of F. T. Procter, jeweller, corner of Yonge and Albert streets, Toronto.

PLUMBING NOTES.

L. Blairsto, plumber, Sydney, has obtained consent to do business in her own name.

The Gurney Foundry Co., Toronto, have installed extensive kitchen apparatus in the Hospice Mount Carmel, Niagara Falls.

The premises of Sheldon & Sheldon, manufacturers of heating and ventilating appliances, Galt, have been damaged by fire. Loss covered by insurance.

Messrs. Harry Mahoney, Guelph, and Sam Gourley, St. Catharines, were in Toronto this week. Needless to say they were given a royal welcome by the Toronto members of the craft.

The twelfth game of the Queen City Hockey League, Toronto, series, between The James Morrison Brass Mfg. Co. and The Ontario Lead and Wire Co., scheduled for January 25, was given by default to The James Morrison Brass Mfg. Co.

Keith & Fitzsimons, Toronto, have the contract for the fittings for a large number of extra bathrooms, which are being installed in the Queen's Hotel, Toronto. They also have contracts from Mr. Kelly for plumbing and heating, in his new residence, Crescent road, Toronto, and from W. G. Gooderham, for plumbing, heating, electric wiring, gas and electric lighting in his new residence, corner of Sherbourne street and Elm avenue, Toronto.

Last year was one of the busiest years in the building line that Winnipeg has witnessed. There were too few builders and plumbers to do the required work, and, for that reason, much that should have been completed last Fall was left over until the Spring. Therefore it causes no surprise to see that there has been a company incorporated under the title of The Imperial Plumbing and Building Co., headquarters at Winnipeg, with a capital of $20,000. The Manitoba Builders' Supply Co. have also been incorporated, with a capital of $45,000.

A Word of Thanks to Our Customers.

The past year's business has been very satisfactory to us, and we are exceedingly obliged to you in consequence.

We have done our best to please you at all times, and where we failed it was our misfortune, not our fault.

Prospects are bright for another prosperous year, and we hope to continue our pleasant business relations with you.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WHY sell Old Style Cork Screws?

The People Want

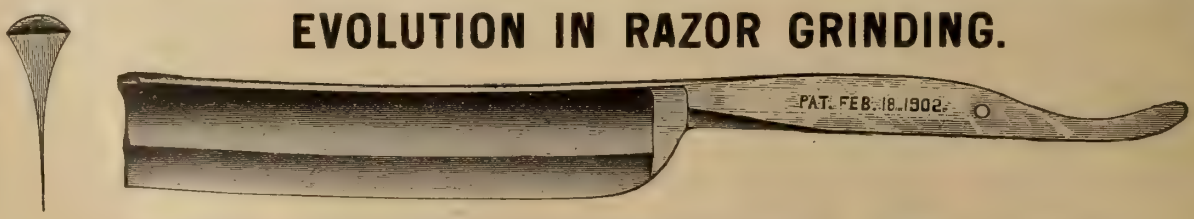
WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

EVOLUTION IN RAZOR GRINDING.

English full hollow ground.



German full concaved.

THE AMERICAN DOUBLE HOLLOW.

Have you ever seen a razor too good to be used on your face?

The old-fashioned way to grind a razor was the English full hollow, but it was found that, if ground thick, it was harsh on the face, if very thin it would vibrate or would not shave clean.

About 30 years ago a new style of grinding was invented, the German full concaved; this was found better; it had only one fault, being thick above the edge it cannot easily be kept sharp on a strop, you have to hone it very often. We are making a newly Patented Razor, the American Double Hollow, which has two distinct hollows. This razor, if properly used on a strop, practically never needs honing, because it is so thin above the edge. Try it and you will be more than pleased.

AGENTS FOR CANADA { **Caverhill, Learmont & Co., Montreal.** **Rice Lewis & Son, Limited, Toronto.**

GEO. W. KORN RAZOR MFG. CO., *LITTLE VALLEY, N.Y. U. S. A.*

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

TIGER,	550	"	"	"
GOLDEN CROWN,	500	"	"	"
STANDARD,	500	"	"	"
SISAL,	500	"	"	"

Blue Ribbon is no doubt the Queen of Binder Twine. It runs six hundred and fifty feet to the pound, and is manufactured from most select Manila Fibre. Six hundred and fifty foot Twine is the only Twine manufactured entirely from Manila Fibre. Dealers should beware of so-called "Manila" Twines which are advertised to measure less than 650 feet to the pound. They are mixed Twines.

Write for samples.

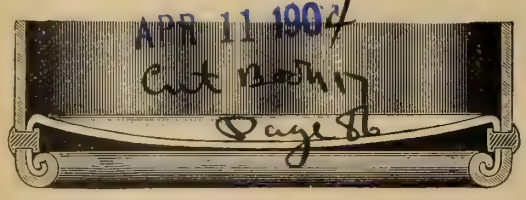
KEMP'S BROAD HOOP ROLL RIM BOTTOM MILK CAN TRIMMINGS



A criticising public have used them for the past five years and the increasing demand is proof of their superiority, also evidence of the satisfaction which they give.

The Roll Rim Bottom having no sharp turns does not break the grain of the metal or lessen its wearing qualities.

Narrow Top Hoops can be supplied in place of Broad Top Hoops if desired.

For Strength, Durability and Finish our Trimmings are unexcelled.

They cost no more than inferior qualities.

We also carry in stock a full line of **First Quality Tinned Iron,** cut suitable for the different size of Trimmings, which we will supply at the lowest current market quotations.

KEMP MANUFACTURING CO., TORONTO, CANADA.

HARDWARE TRADE OUTLOOK AT REGINA, N.W.T.

An Interview with J. W. Smith, of Smith & Ferguson.

IT would be hard to find a more confident tone of optimism than that expressed by J. W. Smith, of Smith & Ferguson, hardware merchants, Regina, N.W.T.

Mr. Smith is a pioneer merchant in Regina, he having started a hardware store there immediately on the completion of the C.P.R., and for a score of years he has, in addition to building up a first-class business, kept a close watch on the development of the district about his town; in fact of the Province of Manitoba.

"Regina has started to move onward," said he to "Hardware and Metal" this week, while on a trip to the Eastern wholesale and manufacturing centres. "The town has made such progress during the last few years that its future is assured."

"What has contributed to this development?"

"Many things. The most important has been the great influx of immigration, especially from the United States, to the district north of Regina.

"Another important factor has been the energetic manner in which the local Board of Trade took hold of things two years ago. We had come to the conclusion that the town was not moving ahead as it should so we determined to draw up a slate, to elect men into the Council who would look after its interests in a businesslike way. The Board selected a strong Council and honored me with their nomination for the mayoralty. This slate was elected, and for two years we used every effort to improve the town. Our first big fight was to pass a by-law to spend $10,000 in improving the streets of the town. This was with difficulty carried. But when the people saw the improvement they were so pleased that when a by-law was put a few months ago to spend $200,000 in waterworks, sewerage and electric light systems there were only four opposing votes.

"The railways have done much for Regina, too. The town has been granted wholesale distributing rates and bids fair to be a wholesale distributing centre of great importance. The C.P.R. main line, the C.P.R. Ascola branch and the C.N.R. main line will soon be connected with Regina. Then a company of local capitalists have a charter for a railway to the southern boundry, possibly to connect with J. J. Hill's line. When this line will be built is still a matter of conjecture, but with the C.N.R. and two C.P.R. lines running into the town we have a good connection. The fact that the 'Masey-Harris,' 'Frost & Wood's,' 'J. I. Case,' and 'International Harvester' companies are building large permanent distributing warehouses in the town is proof of the importance of Regina as a distributing centre.

"One result of the improved conditions in the town has been to attract industries. This will help to make business even better than it now is. The machinery for a planing mill is now on the way and will be installed at once. There is a small pork packing plant in the town, which is to be enlarged greatly in the Spring, I understand."

"That's a good showing. You speak of immigration? How about the future?"

Some Eastern people seem to think there is a boom in immigration just now. Well, that is a great mistake. The country is just beginning to receive population as it should have been coming in five years ago. And this year it will be three times as great as it was last year. This is not guesswork. We are in constant touch with people who come in from the United States, from all the states as far as Illinois and Missouri, but most particularly from the Dakotas. These people come in one Summer, examine the land, the crops and in every way get all the information they can. Every one of these takes home a glowing report, with the result that they attract far more settlers than our best immigration officers. One can judge the number sure to come, but how many more may come can never be estimated. There will be at least three times as many new settlers this year as last year. The result of all this is that land which could easily be had for $5 an acre three years ago can now be sold for $15 per acre. And it is cheap at that. I do not believe land will have passed a safe speculative basis before it is $25 an acre."

"Do the business men speculate in land?"

"Some are unwise enough to do too much of that. If from any cause depression takes the place of abounding expansion some of our merchants are likely to have a hard squeeze."

"How is business in the West now?"

"There has been a good business all right, yet some of the merchants are having some trouble in meeting their obligations as many of our farmers have not been able to pay up as fully as usual owing to the light crop. The country is a new one and many of the farmers add to their stock and equipment as their crop warrants. Well, last Fall a bumper crop was expected but an exceptional frost at the end of the season reduced the crop by one-third and many found they had bought more than they could pay for. However, this will be all straightened out by another good crop."

"Are your farmers progressive?"

"Well I should say so. They are making enough money to have comfort, and they are disposed to secure them. For instance I have ordered two or three carloads of 'Daisy' boilers and 'Safford' radiators from the Dominion Radiator Co., Toronto. Over one-third of my radiator trade is with farmers, many of whom have come to believe that there is nothing to compare with hot water heating. I have also bought five cars of wood furnaces and stoves from the McClary Mfg. Co., London, which goods are in constant demand."

"What is the nature of your business?"

"Just a general hardware business. I did handle implements but quit them two years ago. I have a tin shop and repair shop and do all kinds of contract work. I carry an average stock of about $40,000, so you see I have enough to do to keep my hardware business at its best without touching implements."

"Some criticisms are made regarding Canadian implements. How do they compare?"

"Candidly, I don't like to express myself. I am a good Canadian and would, other things being equal, always give the preference to the Canadian manufacturer. But I believe the American implements are easier running and their ploughs better wearing than the Canadian goods. Consequently they get a good share of the business. I am glad, though, that the Canadian makers are improving their goods steadily. Canadian tools, such as saws, hammers, etc., are well up to the mark."

"You are a protectionist, I presume from the way you talk."

"Then you presume too much. There are few business men in Manitoba who would like to see further increase in the tariff. They all want to favor Canadian manufacturers, but, as I said before, if the Canadians supply us with the proper quality of goods they can keep our trade under present tariff conditions."

"Is competition keen in Regina?"

"When I started in business there were seven hardware stores. Now there are but three. But there is too much rivalry for one of us to get out-of-date. Business is done in a modern way now and at more reasonable price. Do you know I had to pay $700 for my first car of freight, though I got about $200 rebate after more than a year. Now I pay from $200 to $225, so you see the railways are getting costs down to a better basis all the time."

"By the way, you mentioned the interest taken by the Board of Trade in the municipal elections two years ago. Are they still interested?"

"Better, the Council is largely composed by Board of Trade members. My successor, a grain merchant, is an energetic business man and we feel confident that the interests of the business community in the town will be properly looked after."

"I suppose you are down east buying?"

"Wrong again," replied Mr. Smith laughing. "No, I do not believe in buying at the wholesale warehouse. I prefer to buy in my own store where I can know best what I need. I have come to the conclusion that the good travellers are the best friends a merchant can have. If you stand by them they treat you right and you are kept posted about all the new things and you can depend on the prices they give you. And the wholesale houses do well to recognize the value of their best men. It might surprise some of them to know what a great personal influence some of their men have. I am going to take a look through some of the wholesale houses, but my heavy buying will be done after I get back home.

"And let me add this. I read your paper closely. It is of great value to me; in fact I could not very well do without it. Well, good day."

PERSONAL RECOMMENDATION.

THE other day, on entering a neighbor's shop, the writer was just in time to catch the tail end of a conversation between a lady customer and the honest tradesman behind the counter. "And can you recommend this enamel, Mr. Smith?" "Well," replied Mr. Smith, "I've never used it myself, but those of my customers who have speak highly of it." After a moment's doubt, the lady said she would rather wait—she might have it another day—and then went out without purchasing a tin of that enamel, writes Alfred Bedford in the Hardwareman.

The writer's purchase was a small one, and he, too, was soon following in the lady's footsteps out of the shop. But as he wended his way back to his own place of business, he pondered over that conversation, until he came to the conclusion that had that shop-keeper been able to tell his customer that he himself had used that enamel and had found it to be all right, she, the customer, would not have gone empty away, but would undoubtedly have purchased some. So strongly did this conclusion force itself upon the writer's mind that he resolved, in his own ironmongery establishment, to see in how many cases the ability to give a personal recommendation of any goods seemed to sell them, and also to ascertain the extent to which the inability to give that recommendation acted as a deterrent to sales. It was not long before the first opportunity presented itself. A lady having asked to see an enamelled and an iron saucepan, very quickly decided to have the latter when, in answer to her inquiry as to the wearing qualities of each, she was informed that some of exactly the same make had been in constant use in the writer's family for over twenty years.

And so it went on. Whether the articles discussed were kettles or saucepans, tins of paint or enamel, brooms, brushes, or mats, if the man behind the counter was, from his own personal experience and use of them, able to speak in favor of any particular class of goods, sales almost invariably resulted; whereas, if his testimony was limited to what other people—his customers or the press—said about them, the customer generally hummed and ha'd, and either bought something inferior, because cheaper, or else purchased nothing at all.

Since then the writer has found it a good plan to get personally acquainted with as many as possible of the goods he handles. Especially profitable has this plan proved in the incandescent mantle trade. There are scores of people who, in spite of all reason, simply will not be convinced that there is any difference between a cheap mantle and the best until, having simultaneously mounted one of each next to one another in his own establishment, the ironmonger is able to point at once to a very practical illustration of the superiority of the best mantle, both in brilliance and durability.

It has also proved highly beneficial to business to personally test the qualities of each brand of paint and enamel, each kind of gold paint, and the different varieties of repairing preparations, such as seccotine and giantine. Not only is the user spared the mortification of having customers refuse goods because the testimonials in their favor only half satisfy them, but his practical experience gives him a peculiar technical knowledge of the various properties of his specialties that is extremely valuable at every turn of business life.

To carry this principle further, a wonderfully good advertisement is afforded by getting one of the assistants to repair the next damaged article, or retouch a soiled and shabby one with the preparation you wish to specially push; and if the job has been neatly done, to show it in the window or on the counter as a specimen of the handiwork done by ourselves with So-and-So. The assertion that anyone else can do the same should then follow this statement.

Finally, it is always as well, whenever possible, to advertise goods "as used by ourselves," or to state in some form or other that you yourself make practical use of the goods you are advertising.

The ONTARIO TACK CO.
Limited
HAMILTON ONT.

CATALOGUES, BOOKLETS, ETC.

HARDWARE AND METAL would be pleased to review catalogues, booklets or other such publications issued by manufcturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. No charge will be made for these services.

NO MORE DUST.

The Toronto Specialty Co., 29 Colborne street, Toronto, are issuing a small booklet giving information regarding their dustless floor brush. This is for distribution by hardwaremen handling the brush. If you are not acquainted with the brush this booklet would be worth writing for.

WIRE FENCING.

Ironside, Son & Co., 16 Water lane, London, E.C., have issued a practical treatise on "The Erection, Repair and Upkeep of Wire Fencing." This booklet should be of value to many readers of "Hardware and Metal" for it could be used as a standard work of reference for any person desiring to erect wire fencing. It is amply illustrated throughout. Copies of the booklet will be sent to readers of "Hardware and Metal" on request.

AN EDITORIAL ERROR

We all slip up sometimes. This time "Hardware and Metal" finds itself in error. A neat desk calendar was sent the paper from the Vancouver distributing agency of the Gurney Foundry Co. By mistake the statement was published in "Hardware and Metal" that this calendar was issued by the head office of the Gurney Foundry Co., Toronto. We are sorry to have mislead the readers of the paper who wrote asking the Gurney Co. to forward them the calenders. We understand the issue of this neat calendar was restricted to customers of the British Columbia agency and was early exhausted.

CANADA FOUNDRY GOODS.

Hardware merchants are much interested in many lines manufactured by the Canada Foundry Co., Limited, Toronto. This company are now sending out literature relating to the "Beaver" post hole digger, about "Northey" pumps and about new fence designs which they are manufacturing. Any readers of "Hardware and Metal" who have not received this literature can secure it on application.

A CALENDAR PAD.

The Alex. McArthur Co., Limited, 82 McGill street, Montreal, have prepared a serviceable calendar pad which will be appreciated by merchants so fortunate as to secure one. The pages of the pad are about 10 inches deep. On each page are spaces for three day's memorandum, there being over 100 pages in the pad. "Hardware and Metal" readers should write for this on their own letter paper to secure a copy.

A CHAMBERLAIN CALENDAR.

Possibly the most impressive and expensive calendar of the year has been issued by the A. R. Williams Machinery Co., Front street east, Toronto. On a large sheet on a dark background is presented a superb likeness of the "Man for the Empire," Hon. Joseph Chamberlain. The advertising matter is in rich bronze and harmonizes nicely with the drawing. Naturally such a calendar, the cost of which is a heavy item, is not for general distribution. It is only being sent to customers and prospective customers of the firm. Machinery buyers would do well to mention "Hardware and Metal" in writing for this superior calendar.

MILK CAN PRICE LIST.

The Thomas Davidson Manufacturing Company, of Montreal, have issued to the trade a new price list of cheese factory milk can trimmings and milk cans. It is well illustrated showing the various lines handled by this company. Prices are quoted for all lines. If you have not recived one, write for it.

THE D'OLIER ENGINEERING CO.

The D'Olier Engineering Co., Philadelphia, have issued a bulletin containing an extract from the December number of Power, which describes the new shops of the Mexican Central Railway Co. where there is installed the DeLavel steam turbine generator, manufactured by the D'Olier Engineering Co. with two armatures to each turbine.

MACHINERY

THE MACHINERY MARKET.

Ontario.

Office of HARDWARE AND METAL.
10 Front street east,
Toronto, February 3, 1904.

AT the present time the machinery market is not in so satisfactory a condition as indications three weeks or a month ago went to show. Both last week and this week the volume of business done has been less than three weeks ago. At that time there was every indication that the machinery trade was opening up very brightly for the coming year. Enquiries were numerous and also promising. Later a considerable number of the enquiries were developed into substantial orders by the dealers. However, this continued for little more than a week, and then there was a falling off. Some firms say that during the last two weeks there has been less business done than during the same two weeks of last year. This should not be since enquiries during the latter part of December and the early part of January were more numerous, and of a more promising nature than during the same period a year ago. Machinery dealers can only conjecture as to the reason for this condition of the market. It is not thought likely that the severe weather and the consequent blocking and delaying of trains on many of the branch lines had much, if anything, to do with it. Although the actual volume of business does not make a good showing, still enquiries are frequent, and seem to indicate that the present condition is merely a temporary one.

The one bright feature of the market is the good demand for engines and boilers. This line has made a good showing through January and there is every reason to hope that February will follow suit. The Northwest, Manitoba and Northern Ontario are making large demands for engines and boilers for varied industrial purposes. The demand for machine tools is also good this week, showing a slight improvement over last in that respect. The demand for wood-working machinery is even below normal, in that the number of orders placed for sawmill, shingle mill and planing mill machinery have been few, and enquiries have also been scarce. Perhaps the number of enquiries for gas and gasoline engines has been greater this week than last, but the actual business done in that line has not been large.

Electrical machinery still lags on the market, no improvement is shown over last week except in the matter of enquiries. Enquiries have been very numerous, but buyers seem to be holding back for some reason. However, this does not worry the dealers a great deal, since they feel that the demand is good even unusually so and that it is only a matter of time until prospective buyers begin to place their orders. It is claimed that the condition of this market is in every way ahead of what it was at the same time last year, so that there is not much cause for anxiety concerning the developments on this market.

The Levy, Weston & McLean Machinery Co. report a good demand for engines and boilers. They have found the demand for iron working machinery fairly good this week, there being an improvement over last. However, there has not been much done in the line of wood-working machinery. The demand for electrical machinery has been normal with that of preceding weeks, which means not very good.

The A. R. Williams Machinery Co. report that they found the demand for engines and boilers very good, they having just shipped a car-load out West The business done in iron-working machinery has been fair, with a somewhat brighter aspect than last week. Nothing much has been done in wood-working machinery, nor has the demand for electrical machinery shown any improvement. This firm is about to start their annual business campaign throughout Manitoba, the Northwest and British Columbia. T. A. Hollinrake, vice-president of the company, leaves very soon on his annual tour across the continent, which will extend over three months. Unless this year proves an exception to the rule, the firm will be making numerous shipments to that part of Canada as a result of Mr. Hollinrake's trip.

The Jones & Moore Electric Co. report no perceptible increase in the volume of business this week. Mr. Moore says that, judging from the large number of enquiries, the demand for electrical machinery must be even unusually good. However, buyers seem to be delaying the placing of orders. He is very hopeful for a good market in a short while since if there is the demand that the enquiries show, orders must be placed at one time or another. He doesn't see the reason for the withholding of orders, but whatever the reason he expects to see them placed bye-and-bye, as has happened in former years. The outlook now is considerably brighter than it was at this time last year.

The Dominion Motor and Machine Co. report numerous enquiries for their gas and gasoline engines for farm use.

Quebec.

Office of HARDWARE AND METAL.
232 McGill Street,
Montreal, February 3, 1904

THE improvement noted in our last week's report has continued this week. The stagnation of the holiday season is now well passed and continued activity may now be expected. The improvement this week has been manifested both in the increase of actual business and in a number of unexpected enquiries. Machinery men are now in much better humor and a feeling of optimism is very marked.

Actual business this week has centred around sawmill outfits, wood-working machinery, and machine tools. Several house report sales of sawmill outfits and sawmill supplies. A number of new mills have been started in the Ottawa Valley and Gaspe Peninsula and these have called for complete outfits. Trade would have been still brisker were it not for the continued cold weather and deep snow which have hindered deliveries.

In machine tools a couple of good sales are reported by one house and sev-

eral more sales are likely to be made very soon. Canadian buyers are now becoming convinced that prices are likely to be well maintained this season and no break in prices is now expected from United States houses. Hence they are about to place some large orders on the Canadian market and competition will be principally among Canadian houses and American firms having branches here.

In engines, boilers and shafting there has been a good movement during the week and the outlook in these lines seems particularly good. For gas and gasoline engines there has been some enquiry and a few small sales have been made. This is a line which a few houses are making a strong effort to push in the Canadian market.

The Laurie Engine Company report business quiet in heavy engines and boilers. As before stated, their orders now at hand will keep them busy for several months. In small engines there has been a fair movement and some enquiry. Engines and boilers for sawmill outfits are moving now and a number of enquiries came in last week. Wood-working machinery of all kinds is selling well. A large sale was made last week in the Lake Megantic district.

The Fairbanks Company report this week a big improvement in actual business and an increased number of enquiries. A couple of large sales of machine tools each aggregating several thousand dollars were made last week. Gas and gasoline engines are meeting with considerable enquiry and some sales. The season has opened very auspiciously and there is no reason to doubt that 1904 will be a prosperous year in the machine tool trade.

Alfred Rubra, of the Machinery Exchange, finds a big improvement in this week's business. A number of quite unexpected enquiries for sawmill outfits were received the latter part of last week and good business seems likely to result. Actual sales of engines and boilers this week have been quite satisfactory and altogether the prospects seem much improved. In machine tools business is now commencing as buyers are at last becoming convinced that concessions are not to be obtained.

E. Leonard & Sons find business conditions in their Montreal branch much the same as last week. Trade in January has been quite satisfactory and Manager Plant is looking forward to a prosperous season. Some good sales were made during the week of engines and boilers. Some enquiries for mining machinery are coming in.

W. H. Nolan, of the Canadian Machinery Agency, reports a continued improvement in the demand for almost all lines of machinery and machinery supplies. Buyers who, a month ago, were disposed to hold off for lower prices are now commencing to place their orders. The outlook seems quite satisfactory.

Williams & Wilson in common with other Montreal machinery firms find a big improvement both in actual business and the number of enquiries received.

St. Hyacinthe, P.Q.

The F. X. Bertrand Company find business conditions for the first few weeks of 1904 very satisfactory indeed. For all kinds of foundry supplies they are experiencing what, for this season, is a very brisk demand. They also find considerable enquiry for engines and boilers for sawmill outfits and for general lines of wood-working machinery. Pumps and hydrants are also meeting with a fair demand.

New York.

The Iron Age says that there is no change in the situation to be reported The volume of business has not increased very materially, although prospects have continued to improve. The American Machinist says that before many weeks shall have elapsed machine tool men will be able to announce that they have closed some good orders.

Cincinnati.

The Iron Age says: "If the exact situation as to conditions among the machine tool men of this city was actually known it would give one anything but an optimistic opinion of things in general. Surface indications point to the fact that trade has failed to put in an appearance at the time expected, and like the will-o'-the-wisp, has eluded the grasp of the different plants in this section of the country. There have been many reasons suggested as to why, in the midst of prosperity, with the mineral and agricultural resources of the country being developed as never before, this seeming uncalled for depression exists. Surely there is no lack of demand, and this certainly is not the real cause. With the railroads estimating on increasin their rolling stock and making extensive expansion in many of their shops commensurate with the immense tonnage which confronts them, why should trade at this particular time seem as if the bottom had dropped completely out?

"The question seems to resolve itself into the fact that manufacturing life the same as animal life, needs rest; so that after several years of strenuous exertion, when everything was keyed to its highest tension, throbbing and beating with the unusual demands of the time, what is more natural than that following this period should come a season of relaxation? Just how long this shall continue is a matter of grave doubt and uncertainty, but it is generally conceded that within the next 60 days a normal condition will prevail."

Chicago.

The American Machinist says: "Not in many months has there been in any branch of the Western machinery market a change in the outlook so radical as that which has occurred during the past four weeks. It is strongly marked in the electrical machinery trade. With perhaps not a single exception, the representatives of electrical machinery manufacturers located here say they have far better prospects for doing business than at any time within six months or longer.

To Clean Belting.

IF convenient, make a tank with a tight fitting cover; if not, a good strong barrel sawed through the center and a cover fitted thereto will answer. Place in tank or half-barrel about 10 gallons of naphtha, the receptacle being tightly covered, evaporation is minimized.

Take a belt, regardless of dirt, oil, cement or belt dressing that may have been plastered over its face, and coil, place coil on edges of belt up or perpendicularly in tank, seeing that there is sufficient naphtha therein to cover belt, which should remain in this position for ten or twelve hours, after which it should be reversed and allowed to remain for a corresponding time.

The period of immersion should be governed by conditions of belt as regards dirt to be removed.

The belt being coiled and placed edges up in the tank, the dirt loosened by action of the naphtha, drops to the bottom.

After belt has remained in cleaning receptacle the allotted time, remove, allowing the naphtha to drain therefrom into the tank, and lay it out flat, stretching or shaking until almost dry, when the edges should be cemented, as

Some people raise money by raising cheques, then the drawer of the cheque raises Cain, because he has to stand the loss, whereas the simple precaution of using

A Canada Cheque Protector

would prevent alterations of a cheque and protect it from being changed to a larger amount.

Made in Canada, for Canadians, the price is reasonable, $10. and the Patantees and Manufacturers are the

the naphtha has a tendency to open the edges, though has no effect on center of face of belt. Before cementing edges the old cement thereon, if any left, should be carefully scraped off.

The naphtha bath hardens the belt more or less, and before using again it should be thoroughly rubbed with some well-known preparation that will soften and preserve the leather, after which a good belt dressing should be thoroughly rubbed in.

—

Machinery and Electrical Notes.

The London Rolling Mills, London, Ont., are still shut down owing to a lack of soft coal.

The total coal sold was 4,621, 074 tons as compared with 3,898,626 tons for 1902. The production was 5,245,247 compared with 4,362,869 tons in 1902.

The annual meeting of the Benefit Society of the employes of the Waterous Engine Works Co., Brantford, Ont., was held recently. The old officers were re-elected. The secretary's report showed a distribution for sick and funeral benefits of $1,365, with a balance of $350 in the treasury.

The following figures for Nova Scotia in 1903 are given by the N. S. Department of Mines: Coal raised in 1903 amounted to 5,245,247 tons as compared with 4,362,869 tons for 1902; iron ore, 415,196 tons as compared with 489,731 for 1902; pig iron output was 194,444 tons as compared with 206,193 for 1902; steel ingots, 180,434 tons in 1903.

The promoters of the new car works to be erected in connection with the Sydney Mfg. Co.'s plant at Sydney, N.S,. are asking a bonus of $10,000 from the city council and exemption from taxation. The capital for the carrying out of the scheme has been collected, and if the reply of the council is favorable the works will be started in the Summer. They will cover seven acres of land. It is the intention of the company to build all kinds of wood and steel cars.

John E. Bates, of the Portland Mining Co., owners of mining properties at Aspen Grove, B.C., has announced the company's intention to erect a smelter at a cost of $600,000 to treat the copper-gold ores at Aspen Grove. Nearly a hundred men have been busy all Winter on development work, and Mr. Bates says there are nine ore dumps at the mines each containing from three hundred to twenty-two thousand tons of very rich ore, all ready for treatment. Aspen Grove is located some 60 miles northerly from Spences Bridge, B.C.

AMERICAN MACHINERY IN CANADA.

IN answer to an article in the American Machinist stating that machine tool concerns in Canada was apprehensive of an American invasion with lower prices but that American manufacturers interviewed said they had no intention of doing anything of the kind, the head of the sales department of a leading Canadian machine-tool house writes that this is not a true state of affairs. He writes that his firm "have a confidential letter from a friend who obtained quotations from several of the leading concerns in New York, quoting him prices for the home market, but to the Canadian trade quotations were based on export prices which are from 10 to 12 per cent. better than they will sell for in the home market, and to the Canadian trade they give an extra 2 1-2 per cent. over and above the regular export price. When asked why they named this additional 2 1-2 per cent., he was informed that they could send machine tools into Canada on skids the same as they would ship in the United States, and for the European trade they had to be boxed, which they figured was equal to 2 1-2 per cent., and for that reason they would give an extra 2 1-2 per cent. to the Canadian purchaser. Another thing is that American machinery firms are advertising their wares more extensively in Canada than they have in some time. In addition, they are shipping surplus machinery for stocking purposes to Canadian brokers. In any of the machine warerooms, either in Toronto or Montreal, you will find large stocks of American machine tools such as made by the Cincinnati makers and some of the other Eastern firms, and we understand from good authority that they are even shipping this machinery into Canada, consigning it to Canadian brokers to be sold whenever possible. This, together with travellers direct from the houses, is pretty good evidence that the machine-tool makers of the United States are giving as close attention to the Canadian market as they would almost to a neighboring state. There is no doubt that it is going to have its effect on the Canadian machine-tool builder and that effect is going to be felt very quickly."

One of the most representative men in the machine-tool trade in Cincinnati, asked as to the foregoing statements, replied:

"To say that Cincinnati machine-tool men are sending their products to Canada to be sold whenever possible, is not so; neither is there anything in the statement that lower prices are being quoted to Canadian buyers. The 25 per cent. tariff is enough of a handicap, without going into anything like that. That American manufacturers have become a little more active recently in trying to make their products known in Canada, is true, but for the writer of that letter to quote that by way of corroboration for his statements, is giving the matter undue importance. Besides, there is not enough business in Canada for American machine-tool men to adopt the extreme methods of doing business as that Canadian writer outlines. In Cincinnati prices are being strictly maintained."

A local machine-tool merchant was asked for his opinion of the letter:

"I can say for a positive fact that there are no concessions being made to Canadian buyers. During the past week, for example, we had enquiries for three machine tools from Canada, whose aggregate value was about $6,000. We made a special effort to get a reduction from the manufacturers, but were unsuccessful. Price lists for American machine tools are being rigidly adhered to."

Another machine-tool dealer, after expressing himself in a similar manner to those we have quoted, added:

"I am afraid our Canadian friend is not doing the business he would wish, and, wanting to find some excuse for it, lays it at the door of American manufacturers. You know it's an awfully consoling thing, when anything goes wrong, to blame it on somebody. I have been there myself, and know how it is."
—American Machinist.

IRON WORKS TO ENLARGE.

The management of the Sherbrooke Iron Works, of Sherbrooke, Quebec, are considering the advisability of greatly extending their works this Summer. Like so many other concerns in these years of prosperity they have had more business than they could conveniently attend to with their present equipment, and it seems absolutely necessary to make considerable extensions in order to profit by the wave of prosperity. When the extensions are made the management expect to add to their business in the other provinces.

INQUIRIES FOR CANADIAN TRADE.

The following were among the inquiries relating to Canadian trade recently received at the Canadian Government office in London, Eng.

1. A London steel and iron merchant is open to act as buying or selling agent for Canadian firms or public corporations.

2. A firm of Australian wine importers wish to open up negotiations with a first-class house in Canada with a view to establishing an agency for the Dominion.

3. The makers of certain gas and electrical light fittings are making inquiry respecting the possibility of doing business with their goods in Canada.

4. An inquiry comes from Antwerp for iron pyrites, in lumps, from Canada.

5. A firm of paper exporters wish to get into touch with Canadian stationery houses with the object of introducing a specialty.

6. The makers of a sheep-dip and other disinfectants are seeking to do business in Canada, and have made inquiry to this end.

7. A firm of implement makers is seeking supplies of spade, shovel and fork handles from Canada.

8. A gentleman with a thorough knowledge of the hardware, paint and glass trades, is prepared to undertake the representation in England of a Canadian house of good standing.

9. Inquiry is made by a Dublin firm for names of Canadian exporters of oaken and soft wood shives.

10. A firm manufacturing metal shelf brackets, door handles, hinges, hat and coat hooks, etc., are seeking a market for these goods in Canada.

11. Inquiry is made for the address of a Canadian manufacturer of a certain cement or glue largely used by musical instrument makers.

12. A Glasgow firm of grain and flour merchants is desirous of taking up the representation of a Canadian house.

13. Inquiry is made for Canadian exporters of oak mouldings for picture frames.

14. A timber firm engaged in the Australian trade has asked to be furnished with a list of the various lumber mills in Canada, and of lumber exporters.

The following enquiries were received at the Canadian Section of the Imperial Institute, London, Eng.:

15. A Manchester timber merchant wishes to purchase supplies of birch veneer, lengths 24, 30, 36 and 42 inches, by 8 in. wide and 1-30 in. thick, and invites quotations from Canadian firms who can furnish the article.

16. A firm manufacturing cane and wicker furniture and also children's mail carts, etc., is prepared to appoint a suitable Canadian resident agent.

17. A firm manufacturing picks, shovels, spades and other implements used in railway construction, asks to be placed in communication with importers of these lines.

18. A firm manufacturing hosiery (cashmere, worsted, merino and cotton stockings and socks) is open to appoint resident Canadian agent possessing the requisite connection. First-class references required.

[The names of those making inquiries may be obtained from the Editor of HARDWARE AND METAL.]

THE WAR IN THE EAST.

THE imminence of war in the East is regarded with keen regret by those who have hoped for a peaceful solution of the differences existing between Russia and Japan. The aggressor is assuming a terrible responsibility, and is precipitating a conflict which may engulf all Europe in a bloody and devastating warfare. War is a hideous monster, which only residual barbarism and want of imagination makes possible among men to-day.

Apart altogether from humanitarian reasons war is a calamity to the world at large and to the business world in particular.

In the first place hundreds of thousands of men, the pick of the countries involved, are torn away from useful employments, where they have been engaged in producing articles to supply the multitudinous needs of a poverty-stricken world, to tramp or ride hundreds of leagues, for what? To take the lives of similar workmen who have been similarly torn away from useful employment for a like unprofitable purpose.

The goods these men would have produced are lost to the world, at the same time thousands of other workmen are turned from the production of the necessities and luxuries of life to the production of instruments of destruction to be used by the first set of workmen against their opposing fellows.

In all this millions of dollars are swallowed up by the cavernous maw of the war. Where does all this money come from which upsets the humdrum industrial world and converts it into a system of arsenals and cartridge factories? It comes from the general fund of savings which would otherwise have found investment in the development of industries, in the production of commodities for the use of mankind and in the payment of workmen who would thus have been put in a position to purchase the commodities so produced.

But war absorbs this fund; money becomes scarce and interest high; owners of factories can not secure the funds to extend their works; progress is checked. The nation, or the world at large, like the prodigal, has wasted its substance on riotous living and must bear the penalty of hard times.

Britain felt it after the Boer War which fortunately occurred at the crest of a wave of extraordinary prosperity. Its effects, however, are still seen in the low price of consuls. Consuls are no less safe than ten years ago; the high rates of interest due to the scarcity of money consequent upon the vast expenditure upon the war has depreciated consols to their present low rate. Had not such a stupendous amount of money been sunk in the Boer War we would have found little difficulty in securing funds for our transcontinental railway at a rate very considerably below what now must be paid.

Should the Japano-Russian embroglio develop into a war of great magnitude, certain lines of trade may be temporarily stimulated, but the final result will be to absorb the surplus capital afloat, raise the rate of interest and precipitate hard times.

CANADA'S INDUSTRIAL PROGRESS

THE census statistics for 1901, which have just been completed, furnish interesting information about the progress of the various branches of Canadian industry. From figures to hand it is manifest that Canada's progress during the census decade 1891-1901, was essentially due to her agricultural and forest resources. Of the aggregate gain in production fully 85 per cent. is credited to flour and grist mills, butter and cheese factories, meat packing and slaughtering establishments, almost wholly the products of agriculture. Of the other 15 per cent. increase a large share consists of the expansion in the manufacture of wood pulp and of log products.

Among the lines in which a satisfactory gain is recorded are the following:

Product.	1891.	1901.
Log products	46,750,000	$50,805,000
Wood pulp	1,050,000	4 462,000
Slaughtering and meat packing	5 264,000	22,217,000
Butter and cheese	10,697 000	29,462,000
Agricultural implements.	7,252 000	9,597,000
Cottons	8 740,000	12 595 000
Electrical apparatus, etc.	801,700	3 032,000
Fish preserved	5,661,144	8,025 630
Smelting	13,016 200	7,082,384
Iron and steel	4 356 730	6,912,450
Harness and saddlery	1,501,750	3,427,250
Flour, etc	30,721,000	31,835,000
Boots and Shoes	12,706,215	18,481 216
Leather	9,711,781	12,068,600
Car works	9,450,525	11 500 816
Bread, biscuits and confectionery	8,374 306	11,637,808
Printing and publishing.	7,671 310	10 319 241
Tobacco and snuff	2 347 650	6,469 961
Cigars and cigarettes	3,280,114	5,352,151
Plumbing and tinsmith'g	5,716,250	6,553 957
Carriages and wagons	5,942,339	6,650,912
Hats, caps and furs	4 743,888	5,876,467
Boilers and engines	2,433,878	4,626 214
Men's furnishings	2,647,200	4,623,652
Paper	2,570,722	4,380,776

In woollens, ship and ship repairs, foundry products and distilled liquors small reductions are shown.The total production, however, shows a gain, which though not nearly as large as it should have been, is an evidence that Canada expanded more industrially than she did in numbers. The total number of manufacturing establishments with five employes or over in 1891 was 13,679 with a product of $363,156,797 as compared with 16,300 with a product valued at $481,053,375 in 1901.

THE MONTREAL TECHNICAL SCHOOL.

MONTREAL citizens, and particularly the business men of Montreal, should take a live interest in the prospectus of the projected Technical School for that city. The movement towards the establishment of such a school was inaugurated by men representative of the industrial, commercial and financial interests as well as the educational organizations of Montreal.

The Board of Governors have formulated a course of studies, have secured a suitable site, and also obtained the promise of co-operation from the Mechanics' Institute and of a large degree of financial support.

However, further financial assistance is required and it is from the business men of the city that the promoters of the school have reason to expect and to receive the money required. "Hardware and Metal" has repeatedly pointed out the advantages of more widespread technical training. In Germany, Britain and the United States technical education is one of the foremost characteristics of industrial progress. Canada has been slow to move in this direction, but there seems to be every evidence that greater attention is being given to the matter and a more general belief in its efficiency.

It is proposed to provide accommodation for 2,000 to 3,000 men, women, boys and girls who seek to extend in a systematic way their knowledge and training yet are not able to take an university course. In drafting the course of studies the committee have planned a three years' course of evening study, suited to those employed during the day who aspire to thorough knowledge of the principles of their trade. The courses proposed are as below:

Department of preparatory instruction (one year course) — arithmetic, drawing, algebra, practical geometry and mensuration, mechanics, elementary physics and chemistry; English, French, commercial arithmetic and composition.

Mechanical and electrical engineering.—Steam, machine construction, mechanical drawing, strength of materials, applied mechanics, applied electricity, locomotive engineering, and instruction in shop work (including pattern making, moulding smith work, pipe fitting and electrical fitting).

Building trades.—Building construction, applied mechanics, architectural drawing and shop work (including carpentry, joinery, plumbing, brick work and masonry, house and sign painting, metal plate work, plastering and steamfitting).

Textile trades.—Applied chemistry, textile design, spinning, weaving, dying and color printing.

Printing trades.—Drawing and design, typography, lithography, engraving.

Applied chemistry. — Chemistry (organic and inorganic), applied chemistry, including chemistry of oils, soaps, colors, brewing, rubber manufacture, paper and pulp making, glass manufacture, metallurgy.

Flour milling.—Flour and general milling, mechanical drawing, steam, applied mechanics.

Boot and shoe trades.—Pattern cutting, boot and shoe making, mechanical drawing.

Commercial course.—French (conversation and correspondence), commercial geography, elements of commerce and commercial law, bookkeeping, shorthand and typewriting, advanced English composition (additional languages, e.g., German and Spanish, if found advisable).

Domestic industries. — Cookery and domestic economy, laundry work, millinery and dressmaking.

Applied art.—Drawing and coloring, design and composition, modelling, applied design.

Navigation. — Navigation, nautical astronomy, naval architecture, shipping (in its legal and commercial relations).

It is estimated that fully $250,000 will be required to make the school a success, of which less than $150,000 will be used for building and equipment. Arrangement has been made with the Mechanics' Institute whereby it will devote to the movement, as soon as an equivalent amount has been subscribed, the equity in its property, amounting to about $100,000. It is not likely that Montreal business men will be found wanting in the proper spirit of generosity when this need is placed before them.

SNOW-BOUND WITHOUT FUEL.

INCONVENIENCE and even material loss is reported in many towns in Western Ontario as a result of the exceptionally heavy snowstorms of the last few weeks. The greatest cause of trouble is a shortage of coal, a lack of soft coal for the factories and of anthracite for domestic heating. In several towns this shortage has become so pronounced that several factories have been compelled to bank their fires, let off steam and stop work altogether.

It would be hardly fair to blame any person for this unsatisfactory condition. The manufacturers assumed they could secure their supplies as they needed; the coal dealers had bought the coal and were awaiting its transportation; the coal was ready at the mines. In fact the railways had, in many cases, the coal on the way and were making every effort to have it delivered. But they had to fight weather conditions entirely exceptional and were under the disadvantage of having to meet the situation with rolling stock not adequate for the ordinary demands of traffic.

The railways, especially the Grand Trunk in Western Ontario, are deserving of censure for the poor service they have given this winter, but it would be hardly fair to lay on their shoulders the blame for what they with the most complete service could not have avoided, being tied-up by an exceptional fall of snow.

A POINT IN PARTNERSHIP LAW.

IN disposing of a motion for an interim injunction in the case of Smith v. Greer this week Mr. Justice Street in the Single Court, Osgoode Hall, Toronto, touched upon a point in partnership law which will interest business men generally. It was held that "Upon the dissolution of a partnership in the absence of an agreement between the partners to the contrary, the firm name, being a part of the good-will and not having been dealt with upon the dissolution remains the property of all the partners like any other undisposed of partnership property. Each member of the late partnership is entitled to carry on business in the firm name subject to the limitation that no man has a right to hold out his late partner as still being his partner in business contrary to the fact."

That is to say, if the firm of Smith & Jones dissolve partnership, in the absence of any agreement as to the disposal of the firm name, either Smith or Jones or both may set up again under the name of Smith & Jones, subject to the aforesaid limitation that it is not held out that the former member is still one of the firm.

SILVERWARE IN FEBRUARY.

THE most progressive hardware retailers have found silverware a line which they can handle to excellent advantage. It not only adds to the attractiveness of the store interior, when properly shown, and makes possible dainty window displays, but it proves a line which responds very readily to efforts made toward pushing it. It, in fact constitutes a line which should find a place in the hardware store. Table furnishing entails the use of silverware almost as vitally as of cutlery and in the same store the householder should be able to secure both his silverware and cutlery. Moreover silverware can be made to supply a want which the hardwareman could not otherwise cater to nearly so well—this want being the result of the universal habit of giving gifts to brides, on birthdays and on other festive occasions.

During February the Toronto departmental stores whose advertising and mail-order system effects the trade of the average retailer in many districts of Canada have, one might say, started the fashion of making a special feature of silverware during the month of February.

The progressive retail hardwareman has found himself able to give his customers as good prices on most lines as do the departmental stores. The same they can do in silverware, and if they were to make it clear by local advertising that they were prepared to sell silverware at attractive prices during February the amount of business passing them to the departmental stores would be infinitely less than is likely to be the case in the towns where the hardwaremen pay little or no attention to the line at this season.

Silverware is too important a line to be neglected.

THEIR PLANT ABOUT READY.

The concentrating plant of the Canada Corundum Co., Limited, Toronto, is rapidly nearing completion and consequently the company expects to shortly be in a much stronger position to supply the wants of their customers, the users of abrasives.

AUTONOMY FOR THE WEST.

THE demand for autonomy on the part of the Northwest Territories is an evidence of the awakening consciousness of the West. The demand is a most natural one and should receive ready sympathy from the still surviving stalwarts who waged a long but finally successful struggle for the boon of self government in the older provinces.

The rapidity with which the territories are being filled up will result in rapidly changing conditions which will need to be met with legislation suited to local needs. The Dominion Government which for many years administered these wide acres in an admirable manner is now confronted with conditions which are changing rapidly and can receive adequate treatment only from those who are on the spot and whose interests are bound up in that of their prairie territory. The Dominion Government should make haste to divest itself of a trusteeship which it has faithfully observed but which it can no longer maintain either with justice to itself or advantage to the West.

It is true that in granting autonomy to the provinces the Dominion gives up certain advantages, but after all it is only right that these advantages should accrue to the provinces-to-be themselves. There is no force in the contention that as the Dominion has spent large sums of money in building the C.P.R. she should exact the last farthing from the West. The east is receiving, indeed has received its payment in the additional business and prosperity that has come to the East through the Western development. The East can prosper best only through the prosperity of the West. Whatever develops the West benefits the East. As the West is best qualified to attend to its own proper development the sooner authority is given them so to do the better for the Dominion at large.

PERSONAL MENTION.

Mr. H. Occomore has purchased the store and tinware business formerly carried on by A. Rumford, Guelph, Ont.

Mr. G. H. Green, hardware merchant of International Falls, Man., was found frozen to death on the step of his own store. It is thought that he must have slipped on the ice, perhaps stunning himself, and thus freezing to death.

Mr. George W. Lewis, son of the late Rice Lewis, founder of the well-known hardware firm of Rice Lewis & Sons, Toronto, ended his life at Niagara Falls on Saturday by swallowing cyanide of potassium. Mr. Lewis was in his 64th year and had not been connected with the Rice Lewis firm since 1877.

Mr. Arthur Gorman, of Cape Town, South Africa, was in Montreal last week after a trip across Canada. Among the opinions expressed by him regarding the trade relations between Canada and South Africa was the conviction that Canadians might get much more business in South Africa if they would get after it more aggressively. South Africa would be dependent on the outside world for many supplies for years to come and had given Canada a preference. If Canadian manufacturers made a study of the trade they could do profitable business there.

THE FIRST COPPER OUTPUT.

ON Monday the Syracuse Smelting Co., Montreal, turned out six tons of casting copper. This, their first trial, was successful in every respect and it is confidently expected that ten tons will be produced daily.

In addition to casting copper, this company are going to make phosphor copper, which is getting to be largely in demand by electrical concerns. They are also going to make phosphor bronze ingots, red bronze as well as yellow brass ingots, which they hope in course of time to suppiy the wants of the Canadian trade. While there is copper made in Canada, none that could be used, as there is only what is known as blister copper as well as copper matte, and all of it is sent to the United States for to be refined. If the Canadians would place all their orders in Canada, there is no question but what there is a large trade to be done by the Syracuse Smelting Company.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, February 5, 1904

Hardware.

THE city trade has not been very satisfactory through the week, but the demand from outside points shows up a little better, though the stormy weather has prevented many retailers from getting deliveries of goods. Stocks are plainly very low throughout the country, and there is no doubt but that people want the goods, and would make purchases were they not prevented (in rural communities) from reaching the stores. A return of good sleighing would certainly greatly improve trade. Perhaps, however, the conditions prevailing now are not an unmixed evil, for many retailers are taking stock the first of February, and the lull in the trade gives them an opportunity to complete it with despatch. The railroads have had great difficulty in places to transport goods with any kind of promptness, and some manufacturers have been obliged to cease their heavy shipments westward. There are few quotable changes this week. The prices for 1904 on lawn mowers will be noted below.

Lawn Mowers—A few orders have been received already for these goods. They are quoted as follows: With 8-inch wheel, sizes 12, 14 and 16, $2.65 each; with 9-inch wheel, size 12, $3; size 14; $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18, $4.75; 20, $5.25 each.

Spring Hinges—Orders continue to come in moderately well for future delivery. Prices are unchanged. We quote as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Game Traps—There is but little doing. The discount is 72 1-2 per cent. on "Victor" and 60 and 2 1-2 per cent. on "Hawley & Norton."

Poultry Netting—A few orders have been received this week. The discounts for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-guage, the discounts are 55 and 5 per cent.

Wire Nails—There is a light movement in wire nails this week. We quote: $2.40 per keg in carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

Cut Nails—There is still a fairly good enquiry for cut nails, and were it not for the weather conditions there would be a good trade doing. We quote $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—These are commencing to move out more briskly. We quote as follows: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c. extra.

Pressed Spikes—There is no change. The discount is 25 per cent.

Horsenails—The demand for horsenails is quite satisfactory for the season. Our quotations are as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—Trade is fair at unchanged prices as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

Fire Shovels—A few sorting orders are being received. Our quotations are as follows: No. 70, 39c. per dozen; No. 55, 55 to 82c. per dozen; No. 57, 82c. to $1.10 per dozen; No. 60, 70 to 88c. per dozen; No. 65, $1.10 to $1.23 per dozen; Duplex, No. 7, 96c. per doz.; No. 9, $1.20 per dozen; No. 11, $1.54 per dozen.

Snow Shovels—The demand for these is keeping up well. We quote the following prices: "Habitant," $2.50 to $2.75 per dozen; "Victor," 30 per cent. off; steel railroad shovels, 45 per cent. off.

Screen Wire Cloth—Orders are commencing to arrive more freely for Spring delivery. The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—The demand keeps up fairly well. We quote as follows: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No. 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Car lots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in car lots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—There is some improvement over last week. We quote as follows: No. 5, $3.65; Nos. 6, 7, and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12. $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. extra per 100 lbs. will be charged.

Barb Wire—There are a few orders coming in. Our quotations are: $2.75 per 100 lbs. f.ob. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is a fair demand. We quote as follows: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.: spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.; hay-baling wire, 20 to 25c.

Fine Steel Wire—There is no improvement in the demand this week. The discount is 25 per cent. with net extras as follows: 1 and 2-lb. hanks, 25c. per 100 lb.; 1-2-lb hangs, 37 1-2c., and 1-4-lb. hangs, 50c.

Brass Wire—There is little doing. The discount is 60 per cent.

Copper Wire—The market is very quiet. The discount is 60 per cent.

Rivets and Burrs—The market is a little more active this week. We quote the discounts as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the

usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—One or two factories in the United States have advanced prices a little, but it is not general. Prices here may stiffen but an immediate advance is not looked for. We quote the following prices: Carriage bolts, common ($1.00) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1.00) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1.00) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3.00) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes, 4c. per lb. off; nuts, hexagon, all sizes, 4 1-4c. per lb. off.

Washers, 45 per cent. off.

Screws—A fair trade is doing. The discounts are: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—There is not much doing. Our quotations are as follows: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

Lanterns—Demand is light. We quote: Lift, hinged or tilt, $4 to $4.25 per doz.; cold blast No. 2, $7 to $7.50; painted dashboard, $6.50 to $6.75; plain dashboard, $6 to $6.25; searchlight, $20 to $24 doz.; brass cold blast, small, $9.75 to $10.

Cordage—There is little doing in this line. Cotton goods are selling well at firm prices. We quote: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11c.; single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 26c.; cotton twine, 22 to 24c. for 3 and 4 plv. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 30c.; cotton candle wick, 21c.

Building Paper—Only a light movement is reported on this market. Our quotations are as follows: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

Cement—Trade is quiet and prices steady. We quote: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—There is little doing. We quote: English, $16 to $22 per 1,000; and Scotch, $17, to $22.

PLUMBING GOODS.

The trade in plumbers' supplies is commencing to open out fairly well for early Spring. The travellers are out on the road, and orders are coming in satisfactorily. The beginning of the season shows up well, and hopes are entertained for a brisk Spring and Summer trade. The new prices out on iron pipe show some reduction, which will be found below. Otherwise there is no quotable change. Lead pipe and soil pipe are steady.

Lead Pipe—There is some demand, and orders are filled on a basis of 8c. for composition and waste, and 7c. for ordinary. The discount is 35 per cent.

Iron Pipe—This is moving out well. A change in the discounts reduces prices considerably. We quote the following prices: Standard pipe, per 100 feet, in lengths under 19 feet—black, 1-8-in., $2.30; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55. Galvanized—1-4-in., $3.20; 3-8-in., $3.45; 1-2-in., $3.90; 3-4-in., $5; 1-in., $7.20; 1 1-4-in., $10.05; 1 1-2-in., $12.20; 2-in., $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in., $4.20; 3-4-in., $5.25; 1-in., $7.55; 1 1-4-in., $10.55; 1 1-2-in., $12.75; 2-in., $17.60. Galvanized—1-2 in., $5.20; 3-4-in., $6.65; 1-in., $9.55; 1 1-4-in., $13.25; 1 1-2-in., $16; 2-in., $21. The discount on all sizes of extra heavy pipe is 12 1-2 per cent.

Soil Pipe and Fittings—There is a moderate trade doing. The discounts are as follows: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—This continues to go well at unchanged prices, viz., 18c. for wire solder and 17 1-2c. for bar.

METALS.

The metal market continues quiet. Pig iron is moving slowly, on account of the American importations, pig tin has weakened in the Old Country and here, but no quotable change has been made. Copper has firmed up a little, and is this week quoted 25c. per 100 lbs. higher. Antimony has also advanced and is now quoted at 8c. Tinplates in the Old Country are firm and somewhat higher.

Pig Iron—Summerlee is quoted somewhat higher this week. Trade, however, is quiet, and except for some special brand there is a small market. American manufacturers have sold iron in Ontario and here at very low prices. It is reported that a good brand of American iron was sold in Ontario at less than $17 per ton. We now quote: Summerlee, $19.50 to $20; Carron, No. 1, $21; do., No. 3, $18.50 to $19; Middlesboro', No. 3, $17 to $17.50; Ayersome, No. 1, $20; do., No. 3, $19.40.

Bar Iron—There is no change. We quote merchants' bar, $1.80; horseshoe iron, $2.05; forged iron, $2.

Black Sheets—This continues to improve in sales. We quote: 28-guage, $2.35; 26-guage, $2.30; 22 to 24-gauge, $2.25; 18 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Galvanized Iron—There is a fair demand for this. We quote: Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates—The English market remains very firm. Locally there is no change, and prices are: Cokes, $3.75; charcoals, $4.

Terne Plates—We quote: $6.75 to $7.

Ingot Tin—The market has eased off somewhat though there has been no change in price, and we still quote 32 to 32 1-2c.

Ingot Copper—The market is very firm and an advance of 25c. is quoted, making the price $13.75 to $14 per 100 lbs.

Coil Chains—There is not much doing. We quote: No. 6, 10c.; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 3-8-inch., $4.00; 7-16-inch, $3.80; 1-2-inch, $3.70; 9-16-in., $3.55; 5-8-in., $3.35; 3-4-in., $3.30; 7-8-in., $3.25; and 1-in., $3.20, with 10c allowance on carlots.

Canada Plates—We hear of no further advances in this line, and prices are steady to firm as follows: 52s., $2.30; 60s., $2.40; 75s., $2.55; full polished, $3.60, and galvanized, $4 to $4.10; galvanized 60s., $4.25 to $4.35.

Steel—The market remains quiet at unchanged prices. We quote: Sleighshoe, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—There is some demand. We quote: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Jonas & Colver's, 10 to 20c; "Air Hardening," 50 to 65c. per lb.; Conqueror, 7 1-4c.

Pig Lead—This market is quiet. Prices are $3.20 to $3.30.

Antimony—There is a fair demand. The price has been advanced to 8c.

Sheet Zinc—A moderate trade is doing on a basis of $6.15 to $6.25 for cask lots, and $6.50 for smaller lots.

Zinc Spelter—There is not much doing. We quote 6c.

Scrap Metals—Trade continues quiet. We quote the following prices: Heavy copper and wire, 9 1-2 to 10c per lb.; light copper 10c.; heavy red brass, 10c.; heavy yellow, 8 1-2c.; light brass, 5 1-2c.; lead, 2 1-4 to 2 1-2c.; zinc, 2 3-4 to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $13 to $15; stove plate, $12; mallable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers 6 to 6 1-2c. per lb.

Ashes.

There is no change. Prices are firm owing to light recipts, and a fair trade is doing. We quote:

First pots, per cwt	6 00	6 10
Seconds	5 60	5 65
Pearls, per 100 lb	7 00	7 25

Hides.

There is still some demand for hides. We quote:

No. 1 beef hides		0 08
No. 2 "		0 07
No. 3 "		0 06
Lambskins	0 70	0 75
No. 1 calfskins	0 09	0 11

ONTARIO MARKETS.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, February 5, 1904.

Hardware.

EXCEPTIONAL weather conditions make it impossible to base an accurate comparison of trade prospects by the volume of business coming. Travellers of practically every line of business report that they are unable to cover their usual territory owing to the heavy snow and that in most districts they find retailers are having a dull time at the moment owing to the trouble farmers and other buyers have in reaching the market. The retailers, however, are not pessimistic, and, as a rule, are placing orders of about the same volume as last year. Yet it is noticeable in wire and wire products that there is not the same eagerness on the part of retailers to protect themselves against an advance. Some are even waiting for a decline. For the benefit of such it is worth noting that the general impression is that the next change in this line will be upwards. An advance in sizes 8 and 10 of socket scoops has been made by Canadian manufacturers. No. 8 is now $20 and No. 10 $24. Cotton has kept high until this week, during the latter part of which considerable reductions in raw cotton have eased the price of various cotton goods. No other price changes are noted.

Screen Wire Cloth—Orders are coming in fairly well at the new prices, $1.50 per 100 square feet.

Spring Hinges—A fair business is reported. Prices are steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—Business shows more activity, though many dealers seem to expect lower figures, which jobbers agree are not likely to come. No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8, and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. per 100 lbs. extra charged.

Barb Wire—A moderate trade is doing We quote as follows: $2.75 per 100 quote as follows: $2.75 per 100 lbs. f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—This wire seems to be in more favor but, like other lines, more confidence as to the future is necessary before retailers order freely. Prices are now as follows: No. 9, $2.70 per 100 lbs. f.o.b. Cleveland, freights equalized with factory points at Hamilton, London, Welland or Windsor and allowance to other points up to 25c.; carlots, $2.65, freight allowance to 20c.

Wire nails—There is a better future order business doing with the base price for ordinary lots decidedly stiff at $2.45 per keg f.o.b. Toronto, with carlots $2.40.

Cut Nails—The market is not strong and there is not much doing even at the reduced price, $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—There is not much trade doing. We again quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horsenails—Very little doing this week. We quote discounts as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Screws—Business is not active. Prices are steady. We quote as follows: Flat head bright, 87 1-2 per cent. discount; round head bright 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Business is even more active, with no change in prices. We quote: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—A good business at steady prices is reported. We quote the following prices: Carriage bolts, common ($1 list), 3-16 and 1-4-in., 60 per cent.; 5-16 and 3-8in., 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach

screws, cone points, 66 2-3 and 10 per cent.

Cordage—Manila and sisal rope are firm, but cotton products are rather easier owing to reductions in raw cotton. We quote as follows: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11 1-2c.; single lathyarn, 11c.; double shingleyarn, 11 1-2c.; single shingleyarn, 11c.; sashcord "Hercules," 29 to 30c; "Star," 36 to 38c.; cotton rope, 3-16-in. and up, 20 1-2 to 22c.; 5-32-in., 25 to 27c.; 1-8-in., 25 to 28c.; cotton twine, 3-ply, 23 to 24c.; 4-ply, 27 1-2 to 28c.; calking cotton, 16c.; cotton waste, colored, 6 3-4c.; white, 10 to 12c.

Winter Lines—There is little doing now in the essentially Winter lines except in snow shovels, which are still moving nicely. Prices are steady in all these lines.

Woodenware—A fair movement for the season is reported at steady prices. We quote per dozen: Washboards, Victor $1.35; Crown, $1.45; Improved Globe, $1.60; Standard Globe, $1.70; Original solid Globe, $2; Superior Solid Back Globe, $2.15; Jubilee, $2.10; Pony, 95c.; Dominion King (glass), $3.10. Tubs, No. 0, $10.50; No. 1, $8.50; No. 2, $7.50; No. 3, $6.50. Pails, No. 1, 2 hoops, $1.75 and $1.90.

Building Paper—Manufacturers state that business is dull at the moment but jobbers are receiving many orders for this line. Quotations are: Tarred felt, $1.85 per 100 lbs.; 2-ply read roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c. per roll.

Cement—The cement market is quiet. Last week's prices continue unchanged. We again quote as follows: Canadian Portland at $2.05 to $2.65 Toronto, and $1.65 to $1.90 at the works; American Portland, $2 Toronto.

Firebricks—Firebricks are dull. We quote English and Scotch each at 28 to 35c.

PLUMBING GOODS.

The trade in plumbing goods is more brisk than last week. The prices then quoted continue unchanged.

Lead Pipe—Business is quiet as usual at this season. Our quotations are: Lead, 7c.; lead waste pipe, 8c.; discount 35 per cent.

Soil Pipe and Fittings—Trade is fair in soil pipe and fittings. We quote the following prices: Lead soil pipe, 50 per cent.; light soil pipe fittings, 50 and 10 per cent.; medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

Iron Pipe Fittings—Trade is quiet but steady in iron pipe fittings. We quote the following discounts: Malleable fittings, 15 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; nipples, up to 2-in., 65 per cent.; nipples 2 1-2 to 6-in., inclusive, 60 per cent.

Copper Range Boilers—Trade is steady. Discounts at 15 per cent. continue.

Brass Goods—Fairly good trade doing in steamfitters' brass goods, with prices steady.

Iron Pipe—Trade is fair in iron pipe this week. We quote f.o.b. Toronto: 1-8-in., $3.25; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55; 2 1-2-in., $19.25; 3-in., $22.75; 3 1-2-in., $28.75; 4-in., $35.25.

METALS.

Were it not for the pessimistic tone of American manufacturers there would be nothing to disturb the confidence of metal merchants and consumers in the future. The freight blockade, while seriously interrupting trade at the moment, is not materially curtailing consumption of metal, which appears to be even larger than last year. Pig iron prices are unchanged, the furnacemen holding firmly for their quotations. Tin is not strong. Higher prices are looked for on copper. Galvanized sheets are lower. Bar iron is steady. Altogether the market is in a sound position, a fairly good business from stock and an improving demand for later delivery being noted.

Pig Iron—While the United States market is irregular the Canadian furnaces are kept busy and are getting good prices. Quotations are steady at $18.50

THE PAGE WIRE FENCE CO. Limited, - Walkerville, Montreal, Winnipeg, St. John

for No. 1 and $18 for No. 2 f.o.b. Toronto. Prices at midland are $1.50 lower.

Bar Iron—There is a fairly good business with prices nominally unchanged. Our quotations are as follows: $1.80 f.o.b. Toronto for extras cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft. 20c., over 20 ft. by special agreement according to length and size.

Black Sheets—Demand from stock for this line has been excellent while enquiries for forward delivery are good. We quote the following prices: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—There is a fair movement at unchanged prices. Prices here are too low for the American producers to reach them. We quote: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—Outside markets are easier, but stocks here are very light and prices steady. We now quote prices at $30.50 to $31.50.

Galvanized Sheets—Business continues steady. Prices are somewhat easier. We quote: Queen's Head, $4.25 for 28 gauge; American, $4 for 24 gauge; Bell brand, $4.25 for 28 gauge; Gordon Crown, $4.25 for 28 gauge.

Tinplates—The demand for shipment from stock has improved, but orders for future delivery are not coming in freely. We quote as follows: Coke plates, bright, 14x20, $3.75; charcoal plates, $4.25.

Copper—There is a fair movement. in both sheet and ingot. Prices are steady at follows: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—Some small orders have been received. Quotations steady. We quote: $3.30 per 100 lb. for pig lead and $3.65 for bar lead.

Zinc Spelter—The volume of business is not large. Prices show an upward tendency at primary market, but the local situation is unchanged at 6 to 6 1-2c. per lb.

Zinc Sheets—The market is firm and a fair business doing in smal lots. We quote: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c., and wiping, 17c.

PETROLEUM.

A fair demand is reported this week. Canadian and American water white are quoted 1-2c. higher. There is nothing special to note. We quote: Canadian prime white, 19 1-2c.; Canadian water white, 21 1-2c.; American prime white, 20c.; American water white, 22c., ex-warehouse.

Old Material—Owing to the recent very heavy snowfall, country traffic is practically at a standstill and as most of the old material comes from the country, the supply is very limited. Dealers claim a good demand and say that if they could supply the demand they would be doing a good business. As it is, business is dull. Prices remain unchanged from last week. We quote as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c. per lb.; heavy red brass, 9 1-2c. per lb.; heavy yellow brass, 8 to 8 1-4c. per lb.; light brass, 5c. per lb.; lead, $2.35 per cwt.; scrap zinc, 3c per lb.; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast scrap, $13 to $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c. per lb.; country mixed rags, 50c. per 100 lb.

Hides, Skins and Wool.

There is a marked advance in fleece and pulled wools. Other than this no change is noted. We quote:

REASONS FOR USING

OUR CELEBRATED

Sheet Metal Building Materials

First and foremost, there's the sterling reliability of the goods—you're absolutely sure of qualities being exactly as represented. Our prestige in that respect has been fairly earned, and it counts for a great deal that your customers never find ground for complaint in the goods we deliver to you.

In addition, there's the ease of handling—the studied, artistic effects—the fire and lightning-proof qualities—and the many other details that have made sheet metal the popular building material for all progressive people.

SHINGLES, CEILINGS, SIDINGS, CORNICES and every other Building Requisite in the very highest grade.

You'll do better business by handling our goods.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

PITTSBURG METAL MARKETS.

NATIONAL TUBE CO. having booked considerable tonnage has decreased its discounts one point all around, equivalent to advance of 4 per cent. net on black and slightly less percentage on galvanized, independents have agreed among themselves to follow suit. Hoop association broken up on account of many charges cutting, market is wide open now and 1.55 full hoop extras is open carload price which is subject to concessions on desirable tonnage, old price 1.65 on contracts this includes light bands while heavy bands 12 gauge and heavier are under steel bar classification and governed as formerly by bar association. Sheets are 2.25 ordinary carloads for anybody who wants them although independents have gone through formality of deciding 2.30 should be minimum price. Have further confirmation nothing in report last week steel corporation had made deal with Welsh tin mills.—Wednesday's telegraph report to the Metal Market, New York.

THE U. S. STEEL MARKET.

The Unted States Steel Corporaton are blowing in additional stacks, and have largely increased production to cover requirements. The drastic measures of November and December have told, and it is understood that even with the new capacity at work the requirements are urgent. Specifications for steel are coming in at a more lively rate, and tonnage is increasing.—Iron Age.

TRADE CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of HARDWARE AND METAL.

THE lumbermen are to ask the railway company to meet them in the effort to shut out disastrous competition of lumber mills from the U. S., which have been shipping lumber into the Northwest and Manitoba and selling at sacrifice prices. The millmen have been negotiating with the C. P. R. for some time to get a concession of sufficiently substantial size to prevent ruinous competition.

As the situation has been for some months now, the mills of the western states have been overproducing and the market is quiet on the other side of the line. To prevent slaughter of surplus on the home market the millmen there have been sending into Canada large quantities of lumber. Not only have they been sacrificing profits to get rid of this surplus, but to lay it down in the Northwest and Manitoba, they have the advantage of better freight rates. The mill men have asked the C. P. R. to give them a concession on freight rates, and they will then make such additional reduction as will make it difficult for lumber to be sold in Canada against the home production.

The question of a $2 per thousand duty on the lumber coming from the States will also be pressed at this session of the Dominion Parliament. The lumbermen claim that they have not been fairly treated in comparison with other industries. They have been for years open to competition with lumber which can be imported from the U. S. free of duty and with better freight rates to competing points. They claim the industry is of such importance to Canada that a fair protective tariff should be imposed to equal that imposed on Canadian lumber going into the United States.

* * *

The newest feature of local lumber conditions is the announcement that a syndicate of mill men from Blaine, Wash., have arranged to build a number of small portable saw mills, with a capacity of 15,000 feet each per day, on the limits owned or controlled by the syndicate, who have large timber holdings here. The enterprise is in charge of C. T. Moore, of Blaine, and J. F. Reilly, of Vancouver, who secured the timber limits.

The lumber to be sawed in these mills is all cedar, which is being so much cut out in the neighboring State of Washington that the mill men there have to look afield for their supply. The intention is to cut the lumber here right on the claims, ship it by barges in the rough direct to Ballard, Wash., where the syndicate control planing mills. Cedar, door, finish and other finer makes of lumber will be worked up out of the rough cedar exported from here.

Of course this move is to get round the recently imposed export log tax The manufacture of the logs into lumber here and the shipment of the lumber, even in the rough, into the U. S., gets round the export tax. Of course the shippers must pay the $2 per thousand duty on the lumber going into the U. S., and the logs, when imported formerly got in free, which was the very kick the British Columbia lumber people had. They were forced to see their logs go into the U. S. free of duty, cut into lumber and then shipped back to Canada, free of duty again. Had not the tax on exported logs been imposed, the parties who now intend building four small mills and cutting rough cedar here, would have taken the logs in the rough direct to Washington.

* * *

Men who are very well versed in the milling and timber industry of this province claim to see in the near future a great transition from the present general method of having the large mills at some convenient location, in most instances a city or town. They think the mills of the future will be built at the limits or areas of land it is intended to cut the timber from. This, they say, will follow increasing taxes in the various centres, and the heavy cost and precarious condition by which the logs are now brought to the mills. There is another feature and that is the men who are employed at mills in large cities have more temptations and are oftener found to be away from work through dissipation.

* * *

The City of Vancouver will shortly begin the preliminary work looking to an expenditure of $150,000 which has been voted for sewer extensions. The proposal is to sewer all portions of the city which are now built up residentially and not yet sewered. The property in such districts will be taxed specially. The method to be adopted in future is to tax all property served by a sewer and to allow property in districts not sewered to go untaxed in that particular. Heretofore all sewer construction and maintenance in this city has been by general levy in the whole assessment of the city, with a few recent exceptions when some small districts were sewered on the local improvement plan, the property owners paying two-thirds of the cost.

* * *

A factory for the manufacture of wood stove pipe, wrapped with steel wire and well coated in bituminous preparation, has been begun by the Pacific Coast Pipe Works, of Seattle, who have been negotiating here for some months. Work on construction of the plant has been going on for some two weeks and it is anticipated that the manufacture of pipe will begin very shortly now. From indications it is likely that a big field will be found in the Canadian Northwest and Manitoba, where several cities and towns have been installing water and sewer systems or are arranging to do so. This sort of pipe is very well adapted to a water works system and has the big advantage of cheaper cost in shipping by rail, the weight being so much less and the loss by breakages being practically nil, while cast iron pipe is often broken.

* * *

The City of Edmonton, Alberta, has recently completed the installation of its waterworks and sewer systems and the City of Regina, the capital of the Northwest Territories, has appropriated a preliminary $200,000 for the same purposes and for the putting in of a civic electric lighting plant. The contract for the waterworks and electric plant has been let to the same contractors who installed the Edmonton system, Dobeson, Jackson & Fry, of Winnipeg. These gentlemen have had large experience in the work they are undertaking. The consulting engineer, under whose plans and from whose designs the work will be done is J. J. Galt, C. E., of Toronto. Mr. Galt has adopted a unique idea in the waterworks for securing pressure, which he saw in the U. S. Two large storage tanks are erected in conjunction with the pumping and power station and these will hold an enormous quantity of reserve water. The initial pressure is to be re-inforced by compressed air, which will be supplied from two other tanks placed above the water tanks. By the mere turning of a valve, the compressed air will increase the pressure on the water in the mains. The initial pressure obtained in the mains leading from the big reservoir which will be built at source of supply, Boggy creek, seven miles from Regina, will be 25 or 30 lbs., but the adoption of the device alluded to will provide all the pressure required in the distributing mains.

* * *

Steamer Aorangi, of the Canadian-Australian line, which arrived this week, brought the first shipment of hardwood lumber for the C. P. R., with which it is intended to experiment in making the finish for coaches and cars. There were 751 pieces in the shipment, which is very valuable. About 870 pieces of red gum, another Australian hardwood, were also included in the imports by the vessel. A new shipment was 150 bales of wool consigned to the eastern states, to be sent over the C. P. R. Usually this freight goes by the steamers which cross to England by way of the Suez and thence across the Atlantic by the other lines. It is expected that the direct route, with a special rail rate across the continent, can compete. Over 2,000 bags of oil cake was another importation of new character from the Commonwealth. The Aorangi also brought 80 bales of hemp, a usual item. 102 bales of fur skins is an indication of the extent of the traffic in that line with Canada, which is a good purchaser.

Vancouver, Jan. 29, 1904.

BUSINESS CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL,
Room 208, McIntyre Block.
Winnipeg, January 30, 1904.

WINNIPEG is getting ready for the annual bonspiel, which promises to be as good as ever. The committees have been successful in arranging for plenty of ice and the city rinks have been busy for more than a month playing down for the "spiel."

Travellers will begin to round up from trips with fall samples and will be in the city during the 10 days of the bonspiel. It is likely that more than the usual buying will take place this year, as more and more country merchants like to go through the houses and make selections for themselves. This applies more especially to the dry goods trade but is true to some extent of all. Even if no buying were done the jobbing houses would consider the time well spent in entertaining country merchants, as it always leads to more trade later on. There are a number of new warehouses since last February and these will be objects of attraction to men from outside. Merchants, jobbers, indeed men in all lines of business regard the annual bonspiel as a most desirable feature of the winter programme and great would be the groaning if for any reason it were omitted. It entails an enormous amount of work on the comparatively few men that make themselves responsible for its success, but they certainly have the satisfaction of knowing that they contribute largely to the extension of trade in the city.

Mr. Mason, manager for the F. F. Dalley Co., of Hamilton, is comfortably installed in his new quarters in the handsome new block on Bannatyne Street East, that was built for Coltart & Cameron last year. Coltart & Cameron occupy a portion of the building and sub-let the balance to other manufacturers' agents and there is now quite a little colony installed, among them being the Frost Wire Fence Company and Wampole's preparations.

The annual meeting of the Board of Trade will be held to-morrow, the 2nd, and the retiring president, Mr. G. R. Crowe, has invited the members of the board to a dinner to follow the meeting. This is an old established custom. Mr. Crowe is the president and manager of the Northern Elevator Company, and about the 20th of the month will sail from New York for Naples, with his family to spend six months on the continent and in Great Britain.

BUSINESS CONDITIONS IN NOVA SCOTIA.

By Regular Correspondent of HARDWARE AND METAL.

TRADE is reported steady and the outlook encouraging. The severe weather has lessened the volume of travellers' orders during January, but all expect to do better on their next rounds. Halifax houses report no very important changes in prices. It is the policy here to make changes only when absolutely necessary, and oftentimes no attention is paid to slight fluctuations which obtain elsewhere. At the present time there is quite a controversy regarding the price of turpentine. The local association has not advanced the price for some time and at the present time Halifax prices are about ten cents below those ruling at Montreal. There is a strong pressure being made to advance prices to a dollar a gallon but the conservative element has so far been able to hold the quotation down, although all the interests freely confess that there is no money in turps at the present Halifax price. If the primary and Upper Province markets hold their present strength for any length of time the Halifax quotation will have to be advanced in the near future.

* * *

During the last week the jobbers here were notified of an advance of about ten per cent. by American manufacturers of builders' hardware. The prospect is for a large amount of building throughout the province during the coming Summer. The advance in American goods seems to have taken the trade by surprise, as owing to the depression in the United States it was thought the tendency was in the other direction.

* * *

A company is being organized at Sydney to engage in the manufacture of cement from the slag and waste matter from the blast furnaces of the Dominion Iron and Steel Company. The capital of the proposed company will be half a million dollars and the plant when completed will give employment to 300 hands. The City of Sydney has undertaken to grant a bonus of ten thousand dollars and tax exemption. Legislation giving effect to the agreement will be submitted during the present session of the local legislature and the company intends to commence operations without delay. The capital has been subscribed for the construction of a car building plant at Sydney, the works for which will cover seven acres of land.

* * *

The Nova Scotia Carriage Company which has only been in operation a few years has decided that the demand for its goods warrants the enlargement of its output and the manufacturing plant at Kentville is to be doubled. The capital also is being increased from $50,000 to $100,000.

* * *

The Cairtte Patterson Company are making good progress with their new brick factory at Fairview, four miles from Halifax. The company manufacture tarred paper and other like products and the new factory is to replace the one destroyed by fire at the North-west Arm last year.

* * *

The high price of antimony is very cheering to the stockholders of the Dominion Antimony Company, which has its headquarters in this city. This province has the only antimony mines in Canada.

PIG IRON AT NEW YORK.

The time is again coming around when sellers of Southern foundry iron are more eagerly looking for business for forward delivery. The heavy bookings of the last quarter of the last year took care of a considerable part of the stock, of current output and of production for the first two months. It is now a question to provide for the second quarter, and the feeling is weaker, with some sellers now quoting on the basis of $9.50 for No. 2 at Birmingham. Some fair quantities are under negotiation both as to basis and as to foundry grades. Furnaces on the lake shore and in the Central West are making low figures, and reports of $12 for No. 2 at furnace are current.—Iron Age.

STEEL RAILS IN UNITED STATES.

The sale of 40,000 tons of steel rails by an Eastern mill to the Canadian Pacific Railroad has been causing a good deal of comment and discussion. It is understood that the price was $21.25 Montreal, which is lower than was arranged for. It is figured that it nets the mill about $18, but it must be remembered that the works in question have the advantage of a drawback of the duty on the foreign ore, which is used almost exclusively. This would figure upward of $1 per ton of rails, taking account of waste in conversion. —Iron Age.

M'CLARY MANAGERS IN CONFERENCE.

THE annual meeting of the branch managers and travellers of the McClary Mfg. Co. was held at the head offices in London last week. Among those present from the branches were: A. D. Kennelly, manager, Toronto branch; A. A. Brown, manager, Montreal branch; J. W. Driscoll, manager, Winnipeg branch; W. E. Drake, manager, Vancouver branch; J. J. Foot, manager, St. John, N. B., branch; John D. Laidlaw, manager, Hamilton branch, and Messrs. Turner, Rawson and Jeffreys, Toronto branch, travellers.

The conference lasted four days, during which time a well arranged programme of meetings for each day was carried out. Among the subjects discussed were: "Lines of Goods for 1904," "Improvements on present Lines," "Buying and selling methods," "Shipping," "Advertising," and "Office Systems."

A large portion of the time was devoted to "Goods for 1904," and "Improvements on present lines." The representatives from the various territories had been gathering suggestions and ideas from the trade for months past, and these were all carefully explained and exchanged at the meetings, with the result that a great many changes and improvements have been decided upon, and the trade in the territories of the different branches may, in future, expect goods from the McClary Co. to be still more suitable to their particular needs.

The McClary Co. have always adopted a progressive policy in matters of this kind, and are careful of their reputation for promptness in changing and improving their goods to meet new conditions and demands. The result is their immense and increasing business on three continents, America, Europe and South Africa, which include every imaginable condition of climate, and keen competition from every other manufacturing country in the world.

Their Winnipeg branch manager, J. W. Driscoll, has unbounded confidence in the West, and thinks that the past two years influx of population is not in the nature of a boom, but is only the beginning of a steady flow of immigration which will continue until all the arable land in Manitoba and the territories has been taken up.

The latest established branch, St. John, N. B., under the management of J. J. Foot, previously of the head office staff, here, has made satisfactory progress, which is very encouraging in view of the peculiar conditions existing in that territory. Small foundries are located in a great many towns of the Eastern Provinces, and these concerns place their stoves, etc., on the market at almost manufacturer's cost, so that the McClary goods have won a foothold in that territory only on account of their superior qualities.

The managers of the other branches, Toronto, Montreal, and Vancouver, also report a very considerable increase in last year's business, and are very sanguine for the future.

Branch Managers of The McClary Mfg. Co., London.

In centre of group is A. D. Kennelly, Toronto; lower left corner, A. A. Brown, Montreal; upper left corner, W. E. Drake, Vancouver; lower right corner, J. W. Driscoll, Winnipeg; upper right corner, J. J. Foot, St. John, N, B.

Window and Interior Displays

Timely Hints and Suggestions

Trimming for the Entrance.

THE novice window dresser when he first determines to devote more time on his display space, almost always starts out with ideas that are too limited in their scope, and do not include a close attention to points that are really prominent in every first-class window. Of course this must be expected, as it is only with time that anything is learned satisfactorily. But window dressing, in spite of the attempts confidently made by those young at the business, and in spite of the faith so many merchants have in their own ability to arrange a window as well as is necessary, is an art, and similar to any other art must be acquired by faithful endeavor and close study. And also like any other art there are those who are adapted to it by nature, and those who would never in a life time make a success of it. For this reason it is always wise for the merchant before selecting the clerk who is to increase his business by attractive windows, to study his entire staff from an artistic and inventive standpoint. Art and invention must both be prominent characteristics of the window dresser, and contrary to what is too often thought, the head clerk is no more likely to be fitted to fill the position than the errand boy. Although the junior clerks are seldom chosen, from the failures the older salesmen make of it, it is evident any one else could have done better.

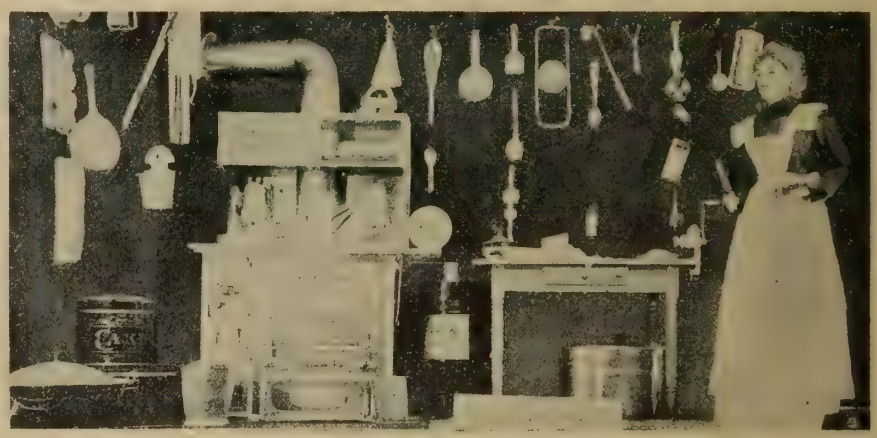
The only advantage a senior clerk or the proprietor has over the lowest down is in his knowledge of the stock, of what will be in demand, and of what should be sold immediately. These things can, however, be kept before the mind of the window dresser by the suggestions that should be made by every employe. No window dresser, of whatever experience, is above where suggestions will be of use to him. He may be most expert at his business, but anyone may still get an idea that could be profitably worked out. In fact this point should be enforced and enlarged upon by the proprietor, for only in this way will the very best use be made of the window, and the proper goods be displayed at the proper time. Co-operation on the part of all the staff is necessary, and a window dresser who is too high in his own estimation to accept ideas, and thankfully, should be open for engagement the next week.

One of the details that the inexperienced window dresser is apt to neglect is the appearance of the window from the entrance. This is not only important on account of the number who notice it when they are entering the store but also from the fact that the first sight a passer-by has of the farther window is through the glass facing the entrance. And first sights are exceedingly important. If the view first obtained is not of a nature to attract attention the observer may walk past without turning at right angles as he must to see the front view, but if it is noticeably good he will wish to see more of it, and thus the front view will come in for its share.

With the end in view of stopping anyone who passes, the window dresser must arrange towards the entrance as well, although not as elaborately, as towards the front. This is one of the reasons why sloping window floors should not be used. A floor that slopes allows the trim only towards the lower side. The floor with the slope towards the front and another towards the side, the point of connection running back at an angle from the corner of the entrance is not at all satisfactory. Although it admits of a certain arrangement toward both sides, very few really tasty displays can be built up for either. The unevenness of the floors prevents very many arrangements, and at any rate the slope is disagreeable to the observer, save perhaps in the case of very low displays.

The window then must be built up in such a way as to have depth as well as a good face. By showing a deep display the entrance will of course show up one side. A shallow display is at the very best suitable only as a variety, and seldom as that.

A plan that can be adopted with great success is to place a double-sided mirror in the window running back at ri angles to the front glass and between this and the entrance glass which will, in ninety-nine out of a hundred stores, leave a wider space at the back than at the front, place shelves perhaps a foot or more apart. On these can be piled quite tasty displays of certain lines of goods that will allow of more variation than may be thought. This, too, makes the window square and a square window can be much more easily treated than one with one side at right angles to the front and the other running off at an angle of perhaps 115 degrees. No matter if both sides run back at equal angles there will still be considerable difficulty in arranging the displays.



A " Kitchen " Display.

This Week's Illustration.

The window shown is a good sample of a kitchen display. The background was made of black enamel building paper. Almost everything that is necessary in an up-to-date kitchen is shown, including the stove, table, boiler, flour bin, coal scuttle, cake tin, dish pan and the smaller articles of tinware. A touch of interest and life was given the window by the introduction of a figure with a pie plate and knife in its hands, as if trimming the pie. On the table was a food chopper and beside it a plate of cracker meal as if just ground. The window is very simple to arrange and is sure to attract attention. There is no extra expense save in the building paper, and any window dresser can fix it up with the figure forming the only difficulty.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITICISM

Edited by **John C. Kirkwood,** TORONTO.

NOTE—Hereinare discussed the principles and practice of advertising. Subscribers are invited to send Mr. Kirkwood specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

The Rise and Progress of Advertising.

THERE was a time, not many years gone in this country, when merchants relied almost altogether upon their salesmen for the selling of their goods. Stores had their customers who "dealt" there faithfully year after year, throughout a life-time in most cases, and even the succeeding generation kept up the connection. These were the days of shutters and coal oil, when the front windows served only to admit light, when merchandise of all descriptions — hardware, dry goods, shoes, groceries, etc.,—was huddled together in quarters far from attractive.

Such conditions are passing or have already passed away. The old-time store is now mainly a memory. Its disappearance was inevitable in this age of social evolution. The specializing tendencies of modern times operated to the overthrow of the old fashioned general store.

Associated with the new order of things, both as an outcome and as a cause is modern advertising. When, for example, there arose a hardware store to contest the trade of the general stores, the very existence of the exclusive hardwareman depended upon his ability to divert trade from united channels unto himself. At once he felt the necessity of providing attractions,—in store appearance without and within, in prices, variety, or excellence of his stock. But to depend on these things alone to sustain his trade in the days of his beginning was manifestly not enough, and he was by necessity compelled to ask for the trade of his community through the use of printer's ink,—namely, by inserting an announcement of his business in the columns of his local newspaper. Thus advertising in the generally accepted sense of the term began.

At first these announcements were very formal in their style and it is hard to understand how they ever realized their purpose. Occasionally one comes across these old-style advertisements even now, and they are curiosities in all truth. Between the advertising of twenty-five years ago and that of the present lies a fascinating history. Today it is hard to conceive what new things in the way of newspaper or magazine advertising remain to be employed. The mind is baffled when it comes to contemplate the possibilities of advertising as found outside newspapers and magazines.

There are those to be found even yet who are skeptical of the value of advertising, who consider the money spent in this form of business-building mere waste. How they explain the rise and development of business from small things to great, excluding advertising as an agency, would make an interesting statement.

The advertising department of an ever growing number of the larger business houses is a clearly defined one, under the charge of a trained man—a man who commands a higher salary than the great majority of other salesmen and office men. The sum of $200.00 a week, or even $10,000.00 a year, is paid the advertising chief of a large American department store for preparing six or seven advertisements per week. This man commands this salary, and cannot and would not be replaced by a man whose market value is $4,000.00 or $5,000.00. These seem extravagant figures to us Canadians, but to the American merchant whose annual turnover totals up into many millions and whose daily business is largely dependent upon the daily advertisement, the having of a writer who can say and set things so alluringly that buyers are all impatient to exchange their money for the goods offered, is a necessity. No mediocre man will do. No inexperienced writer, no matter how clever, can qualify for such a position. It requires a man whose work has been thoroughly tested,—a man who has tested his own work, who has felt the pulse of the public repeatedly and knows its every flurry. Beginnings are usually wasteful, due to the beginners. To entrust the success of the day's business to untried, inexperienced, ignorant writers would be too costly an experiment. Hence it is that men of ability, trained and trustworthy in their judgments and methods, are absolutely necessary. Such men are rare, just because the opportunities for their developing are few. When found they are worth having, worth paying. They sell through their talent sufficient goods to earn their salaries, and they prevent heavy losses through costly errors or ignorance.

The writing of advertising is not the highest attainment in advertising. Beyond the writer is the advertising counsellor,—a man who resembles in his function the consulting physician. His office is to give advice to advertisers who plan to spend thousands, or hundreds of thousands of dollars a year in advertising. Fortunes have been wasted in misdirected or poorly conducted advertising campaigns. The advertising consulting specialist is called in to make a study of the situation. He investigates thoroughly every phase of the subject, and at the conclusion of his study maps out a course of advertising to be pursued, specifying the amount required; how it is to be appropriated; what classes of mediums to use; what is required in the way of booklets and other literature, whether street cars and bill-boards shall be employed; what is to be spent for illustrations, etc., etc. In short, he writes out a prescription so to speak and charges for his advice. $100.00 a day is paid for such services to some well-known men. The consulting specialist doesn't carry out or execute the plans he formulates; this work is performed by another branch of the fraternity.

My purpose in writing for "Hardware and Metal" this somewhat irrelevant article is to bring out as forcibly as I can the significance of advertising, and to persuade if I can some of my readers who may perchance view this matter of advertising lightly, that there lies in it a force for expanding business very much worth studying and worthy of employment in the conduct of their own business.

IRON AND STEEL HOCKEY LEAGUE

THE fifth game of the series of the Iron and Steel Hockey League of Montreal was played on the night of Thursday, January 28, on the Victoria Rink. The contesting teams were those representing Williams & Wilson, heavy machinery, and Drummond, McCall & Co., metals. The spectators saw a swift and exciting game as the opposing teams were very evenly matched. Early in the game the Drummond, McCall & Co. team secured a goal and after the hardest kind of a struggle they secured a second goal just before time was called. The opposing teams lined up as follows.

Drummond, McCall & Co.—J. Gouldthorpe, goal; K. Audras (captain), point; R. Tait, cover point; A. Brophy, rover; L. Martel, centre; H. O. Wilkinson, right wing; C. J. Gowan, left wing.

Williams & Wilson.—Harry Barrett, goal; C. Barcelo, point; W. F. Walsh, cover point; W. Mahoney, rover; A. Gagne, centre; H. Thomas, right wing; W. G. Young (captain), left wing.

The next evening teams representing Thos. Robertson & Co. and the James Robertson Company met at the Prince Arthur Rink. Those interested in this series expected a very close game as neither team had yet suffered a defeat. The result was something of a surprise, as Thos. Robertson & Co. won by a score of 4 goals to 0. The victors had a good combination and they played a magnificent game. It was team work that won the game. Individually the winners were not much (if any) the superiors of their opponents, but their combination was superb. After 4 goals had been scored against them the William street team warmed up a little and played a much better game, but it was too late to avert a defeat. The teams lined up as follows:

Thos. Robertson & Co.—E. Bouchard, goal; W. A. Irving, point; P. Danberry, cover point; H. D. Browne (captain), rover; H. Orsall, centre; J. H. Bedbrooke, right wing; T. R. Lessard, left wing.

Jas. Robertson Co.—W. Robertson, goal; J. Corcoran, point; James Furey (captain), cover point; Alex. Robertson, rover; T. Kilcullen, centre; G. Snowdon, right wing; C. Fagan, left wing.

At the end of the sixth game the standing of the league was as follows:

	Won.	Lost.	To play.
Thos. Robertson & Co	3	0	3
Jas. Robertson Co	1	1	4
Drummond, McCall & Co...	1	2	3
Williams & Wilson	1	3	2

A PROGRESSIVE BUSINESS MAN.

A representative of "Hardware and Metal" had the pleasure last week of calling on William Wallace who for over 40 years has been established as a machinist in Three Rivers, Quebec. In spite of his name, Mr. Wallace claims to be Irish and the geniality of the man might well convince the visitor that he hails from the Emerald Isle. Mr. Wallace is a thoroughly practical man and he was found in his shop busily superintending the work. Throughout and beyond the Province of Quebec Mr. Wallace is known as the manufacturer of first quality canthooks, boathooks, timber dogs and similar goods. A man of sterling worth, his integrity of character is evidenced by the thoroughly reliable quality of his manufactures. "Hardware and Metal" was glad to learn that with him this has been a prosperous season.

BICYCLES IN THE HARDWARE TRADE.

LAST season "Hardware and Metal" endeavored to impress upon hardware merchants the advantage of handling good bicycles. Many followed this advice and aided by the extensive advertising of the manufacturers of wheels they reaped considerable profit. This year prospects for a larger business in bicycles are considered excellent and retailers should be alive to the wisdom of having a good line of wheels and accessories always in stock. It would be useless to say that wheeling is what it was six years ago, nor would it be reasonable to expect that any turn in the tide of popular opinion would make it so, but the fact remains, the bicycle business to-day is on a sounder basis than it was in the faddish era some few years ago. The many people riding bicycles now are those who consider them useful both from a point of general and economical convenience or who believe that the bicycle is an excellent vehicle for exercise, sunshine and fresh air. With all people the wheel will steadily grow in favor and through the judicious nursing which good advertising will give, we fortell this season should see some very considerable advance in business.

The bicycle of to-day, with the hygienic cushion frame and coaster brake, is about as complete and perfect a machine as it is possible for human skill to make. The public eye has been drawn to its good qualities, the dealer can interest that public to material advantage by having a few good bicycles in a prominent place in the show rooms and by talking wheeling. The advertising of the manufacturers will help materially in making this line a profitable one.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

PAINT, OIL AND BRUSH TRADES

PREPARING FOR LARGER PAINT TRADE.

H. A. SHERWIN, president, and W. H. Cottingham, vice-president and general manager, of the Sherwin-Williams Co., were in Montreal last week inspecting the new factory which the company are erecting in that city and which is to be completed in about two months' time. Both gentlemen were well pleased with their inspection.

The Spring trade will be handled from the company's headquarters on St. Antoine street, and the company will not move till the rush is over. By working full time and even overtime all Winter the company have accumulated a stock which they hope will be large enough to satisfy the demands of what promises to be the best season on record.

In conversation with a representative of "Hardware and Metal" Mr. Cottingham chatted entertainingly about the prospects in the paint trade. The new factory was expected to be large enough for a few years to come, but from present prospects he thought it would not be long before it would be necessary to make further additions. Business prospects in Canada were never so bright. "It is a matter of common remark in the United States," said Mr. Cottingham, "that Canada is the country of the future and that if Canadians will throw into the development of their country the same enterprise and energy which the Americans displayed in building up the industrial enterprises of the United States the results in Canada should be just as great."

Asked as to conditions in the United States, Mr. Cottingham said that they are very satisfactory. The West is prosperous on account of good crops and high prices for wheat. Since the early seventies cotton has not been so high and the South has reaped the advantages of high prices. Hence although some of the railways are disposed to curtail expenditures the general public have money to spend and will spend it.

Mr. Cottingham said that the Sherwin-Williams Company are watching with great interest the progress of the fiscal fight in England and in case Mr. Chamberlain succeeds in establishing preferential trade within the Empire they will handle their export trade to Great Britain from their Canadian factory. They have the advantage of being well established, both in the United States and in Canada. At present their export trade to Great Britain is handled from their American factories because the shipping facilties are better than those supplied in Canada. The Sherwin-Williams Company are also developing a good business in Australia and New Zealand. This also would probably be handled from Canada in case prefrential trade within the Empire were permanently established. Superior shipping facilities still keep their trade with New Zealand in the hands of their United States factories.

Mr. Cottingham himself is a Canadian and as such is delighted with the progress which Canada is making. The Sherwin-Williams Company have been so long established in Montreal that they can well lay claim now to being a thoroughly Canadian business. Manager C. C. Ballantyne who has charge of the Canadian business is a patriotic enterprising Canadian of the right stuff and those in his employ are Canadians. From their new factory the Sherwin-Williams Company will be able to handle their rapidly expanding business to the satisfaction of all their clients.

HOLLYWOOD PAINT

is not a low-price paint, but nevertheless a cheap paint, because it is good quality and makes satisfied customers. It is not made by the "hit or miss" process.

Every ingredient used in its manufrcture is the best that can be used to obtain a certain object, and the object is to make a durable paint with maximum covering capacity in a good assortment of rich and true shades.

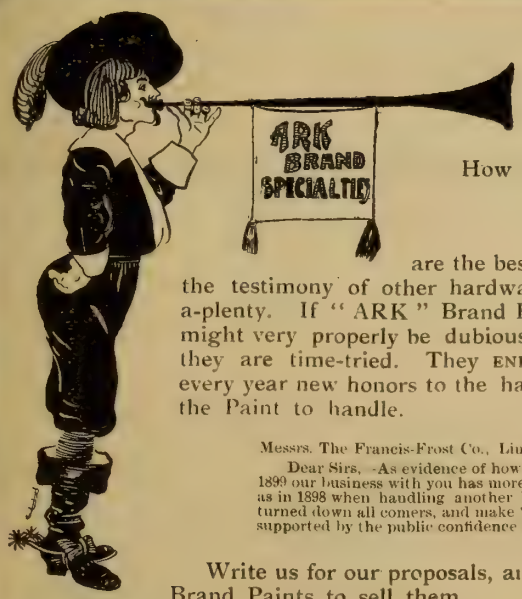
AGENTS FOR ASPINALL'S ENAMEL.



Announcement — Important

How can we persuade you that

"ARK" BRAND PAINTS

are the best paints you can possibly get? Will the testimony of other hardware dealers suffice? We have that a-plenty. If "ARK" Brand Paints were a thing of yesterday, you might very properly be dubious about our claims for them. But they are time-tried. They ENDURE. Paint that wears, that adds every year new honors to the hardware dealer's reputation—that is the Paint to handle.

UDORA, Jan. 20th, 1904.

Messrs. The Francis-Frost Co., Limited, Toronto.

Dear Sirs,—As evidence of how we have found "Ark" Brand Paints, we would say that since 1899 our business with you has more than tripled, and was more than fourteen times as much in 1903 as in 1898 when handling another brand. Our faith in "Ark" Brand Paint is such that we have turned down all comers, and make "Ark" Brand our sole line of paints. In this we have been strongly supported by the public confidence this brand has acquired. Yours truly, R. S. WEBSTER & Co.

Write us for our proposals, and to learn how we help the man that buys "ARK" Brand Paints to sell them.

Montreal, February 3, 1904

TURPENTINE is a shade easier this week, but not sufficient to warrant any further reduction in prices at present, so it remains as last quoted. It is difficult, in view of the interruption of communication, to state exactly the true position of the market. After some delay supplies arrived quite freely last week, and a sudden drop in prices was the result. Should they again be delayed the market will very likely stiffen again. In any event, however, it is not anticipated that there will be much change. The general volume of business is seriously interfered with just now, owing to the snow blockades which seem to be general throughout the country. Orders are arriving spasmodically but shipments suffer serious delays. The officials of the Grand Trunk Railway, a few days ago advised one of the largest paint manufacturers, who was shipping freely, that no more freight could be taken at present for Western points. It is thought that about a fortnight will elapse before traffic conditions get down to their normal level. There are no changes in prices. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Red Leads.—Genuine red lead, in casks, $4.25; in 100-lb. kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge.—Ground, casks, 5c.; in less quantities, 5 1-2c.; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47c.; 5 to 9 barrels, 46c.; boiled, 1 to 4 barrels, 50c.; 5 to 9 barrels, 49c. Delivered in Ontario between Montreal and Oshawa at 2c. per gallon advance.

Terms 2 per cent. 30 days; 90 days net.

Turpentine—Single barrels, 93c.; 2 to 4 barrels, 92c. Standard gallon of 8.6 pounds. Terms 2 per cent. 30 days; 90 days net.

Benzine.—25 to 26c.

Shellac Varnish.—Pure white, $2.60 to $2.80; pure orange, $2.60 to $2.80; No. 1 orange shellac, $2.40 to $2.60.

Mixed Paints.—$1.20 to $1.40 per gallon.

Castor Oil.—8 3-4 to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15 1-4c; 1-lb. packages, 16c.; 1-2-lb. packages, 18c.; 1-lb. tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green.—50 and 100 lb. drums, 15c. per lb.; 25 lb. drums, 15 1-2c; 1-lb. paper boxes, 16c.; 1-lb. tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, February 4, 1904.

Orders for Spring delivery continue to come in fairly well, though travellers are still having difficulty in covering their territory. Prices show no change. Turpentine is so scarce locally that though prices are lower in the South there is no change here. Linseed oil is now higher, considerably higher in the United States than in Canada, but British prices have not gone up as in the Republic. Jobbers are still quoting Paris green 1c. below manufacturers' prices, which are given below. Our figures are:

White Lead—Ex-Toronto, pure white lead, $4.75; No. 1, $4.30; No. 2, $4; No. 3, $3.60; No. 4, $3.35 in packages of 25 lb. and upwards; 1-2c. per lb. extra will be charged for 12 1-2-lb. packages; genuine dry white lead, in casks, $4.87 1-2.

Red Lead—Genuine, in casks of 560 lb., $4.25 to $4.50; ditto, in kegs of 100 lb., $4.75; No. 1, in casks of 560 lb., $4;

Litharge—Genuine, 6 to 6 1-2c.

White Zinc—Genuine, French V.M., ditto, in kegs of 100 lb., $4.25.
in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c. per gallon.

Paris White—90c. to $1 per 100 lb.

Whiting—60 to 65c. per 100 lb.; Gilders' whiting, 75 to 80c.

Shellac—Pure orange, in, barrels $2.45; white, $2.60 per gallon; No. 1, including price of can.

Pumice Stone—Powdered, $2.50 per 15c. less; in less quantities 30c. extra, cwt. in bbls., and 4 to 5c. per lb. in less quantity; lump, 10c. in smal lots and 8c. in bbls.

Linseed Oil—Raw, 1 to 2 bbls., 50c.; boiled, 53c.; 3 to 5 bbls., raw, 49c.; boiled, 52c.; 6 to 9 bbls., raw, 48c.; boiled, 51c.. delivered. To Toronto, Hamitlon and London, 2c. less.

Turpentine—Single bbls, 96c.; 2 to 4 bbls., 95c., delivered; 5 bbls. and over, open. Toronto, Hamilton and London, 2c. less. For less quantites than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

Glues—Broken sheet, in 200-lb. bbls., 8 to 8 1-2c. per lb.; cabinet glue, in bbls., 11 1-2 to 12c.; emery glue, in bbls., 17c.; bookbinders', ground, 10 1-2c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

BRANDRAM'S B.B. GENUINE WHITE LEAD

has long been known as the best white lead the world produces. It is unequalled for whiteness, fineness and body and will cover more than any other white lead manufactured. It is the only white lead used in the manufacture of

WINDOW GLASS.

MONTREAL.

Trade this week is not very active, but the tone of the market is steady, at unchanged prices. Our quotations are: First break, 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

Import orders are as large as usual and are coming in nicely. Prices are weak though there is no change. We quote as follows: Star, under 26 in., $3.10; 26 to 40 in., $3.30; 41 to 50 in., bookbinders', ground, 10 1-2c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

Paint and Oil Notes.

Mander Bros., varnish and color manufacturers, Montreal, have registered.

A new knife for use by glaziers in puttying a window pane, is a tool which will be welcomed as soon as it is placed on the market, says an exchange. It has a reservoir to be filled with putty; this supply can be forced out under the blade by the thumb and forefinger, and a flange on the blade keeps the putty from spreading over the glass and the woodwork.

"Patate."

Environment has a great deal to do with the forming of words and phrases. Even in classical Oxford, a suburban district named after a celebrated country house "Chateau Vert" (Green Mansion) becomes "Shotover" when it is anglicized.

The familiar, popular and nutritious potato in the flowery language of la belle France is known as the "Pomme de Terre" (Apple of the Earth). In Germany it has the euphonious name of "Kartoffel." The Habitant calls the mealy tuber by the handy name of "Patate." The French-Canadians are large growers and consumers of potatoes. They, therefore, use Paris green freely.

Recognizing the fact that "Hardware and Metal" has a large following amongst the French-Canadian hardware trade, the Canada Paint Company, this week, have inserted their Paris green advertisement in French as well as in English.

The Paperhanger's Art.

TO make paper stick to a painted or varnished wall, nothing is better than a little Venice turpentine added to the past when it is made, or isinglass, dissolved in water and a little glycerine is good; three sheets of isinglass to a pint of warm water, and two ounces of common commercial glycerine. Gelatine will answer in place of isinglass; or the walls may be sized with glue size, to which some molasses or brown sugar has been added. But the Venice turpentine is sure, and leaves no nasty coating under the paper as glue or sugar may do.

Venice turpentine in the glue size for a damp wall, is recommended by some paperhangers. Shellac does not prove effective on a damp wall.

Much of the trouble with paper breaking and tearing is due to the workman stretching it too much when hanging it.

It is necessary to keep the hands clean when hanging plain papers, such as felts or ingrains. Felts or ingrains should always be trimmed, no matter how well the edges may look in the roll. Water stains in such papers are caused by their porousness, allowing the paste to come through. Let the paper get perfectly dry, then go over it with clean water, using a clean calsomine brush. Brush the water on quickly and with a light sweep. When the paper becomes dry the stains will have disappeared.

When butting felts and similar papers, use the seam roller on the seams, but don't try to force the edges together with the roller or you will have trouble with the next length. If you are careful when trimming the edges you will not have to force any joints.

Sometimes the edges slightly overlap in places, but all that is necessary is to use the edge of the roller to gently press the edges into place. Some paperhangers leave a very slight space between the two edges, and then force them up into place to make a perfect butt; but this is a bad practice, as the edges will open or shrink upon drying. If you are not skilful enough to make your edges fit closely, then let them lap the least bit, just a hair's breadth, and then you can press the edges into place.

Don't try to make speed on delicate jobs, especially if not expert at it. Fine work demands time and care and the tools must be in good order, and cleanliness observed.

Never crease felts or ingrains on the board, but fold them carefully so as to avoid any crease mark, which would show on the wall.

Japanese papers are difficult to hang, as the layers of which they are composed are liable to come apart.

A badly whitewashed wall will hold paper if sized with glue and brown sugar, or molasses size. It is best to lime walls for good paper, as it gives a better foundation to work on, and prevents the lime in the plaster from spoiling the color of the paper. It adds to the cost of the job—but it pays.

Good Prospects in British Columbia.

"PROSPECTS for business in British Columbia were never brighter than they are at the present time," said C. L. Lightfoot, British Columbia representative of the Gurney Foundry Co., to "Hardware and Metal" on Wednesday.

"Yet," he continued, "it is impossible to see very far ahead in a country where so much depends upon labor conditions. Last year the outlook was equally promising when everything was nipped in the bud by the miners' strike, which reacted first on the miners, then on the smelters and finally on trade in general, which is only now recovering from the set-back.

"The condition of the lead industry has been materially improved owing to protective measures recently introduced by the British Columbia Government. Nothing, however, will be adequate but a straight duty on the foreign product. The bounty offered for Canadian lead is by no means sufficient for satisfactory equitable distribution among the respective mine owners. The output of the St. Eugenie mine at Moyie, when it is running at full blast, will be sufficient to take up the total amount of bounty offered by the government. It will not pay to operate this mine by halves, and it will pay still less to operate largely unless some more substantial means of protection is forthcoming than now exists.

"It is doubtful whether the new assessment bill is going to accomplish for British Columbia what is claimed for it except in small degree. In some quarters it is claimed that the British Columbia banks are in the last instance responsible for the measure and that they will profit more than any one else. One example of inequitable taxation is seen in the assessment of a mine, which is 2 per cent. on the total output. It must be remembered, however, that the total is hardly a fair basis since a large amount has to be deducted for transportation to the smelter and smelter charges.

"Nor is it equitable to the commercial world. Suppose a merchant has his stock on hand valued at $100,000; as a rule from $30,000 to $40,000 of it represents credit, nevertheless he is taxed on a $100,000 assessment. At the same time his creditor is also assessed for $30,000 bills payable, which means unjust duplication. The most that can be said for the bill is that it is an attempt at equitable adjustment.

"One of the sins of omission in taxation is the neglect to license outsiders who come into the province and dump goods there while the man at home is burdened with taxes. A change which is bound to come sooner or later is the raising of the poll tax on Chinamen. When this happens the coolie will no longer have an advantage over the Canadian, in fact he will no longer be a dangerous competitor."

Smelting Iron by Electricity.

AT the annual meeting of the Canadian Society of Civil Engineers, held in Montreal last week. Dr. Stansfield, of McGill, read a paper on "The Electrothermic Production of Iron and Steel." The speaker began by considering the commercial possibilities of producing iron and steel in the electric furnace. Attempts are still being continued to produce iron and steel by processes similar to those usually adopted, but in which the heat necessary for the chemical reactions to take place and for fusing the metal is furnished by means of electrical power instead of by the combustion of carbonaceous fuel as at present. The very high temperature produced by electricity in a furnace containing strongly reducing gases has been already utilized in the production of certain alloys of iron, such as ferro-chrome, ferro-silicon, etc., in which cases the value of the alloy and the difficulty and expense of production by ordinary methods has led to the use of the electrical furnace in spite of its greater cost. The question of the production of iron and steel depends entirely upon the relative cost of fuel and electrical energy. Where cheap fuel is obtainable, electrical energy would not compare favorably owing to its higher cost, but where electricity can be produced under the most favorable conditions, there is just the possibility that in certain cases where crucibles are now used to fuse material, in order to protect it from the gases unavoidably present in an open hearth furnace, the electrical method will be adopted, and this particularly where definite temperatures have to be attained or kept for any length of time.

HEATING AND PLUMBING

A Magnificent Warehouse.

COMMERCIAL travellers from all parts of Canada unite in saying that the new warehouse into which the Mechanics' Supply Company of Quebec, are now moving is one of the very finest in the whole country. It is an ornament to the business district of the "ancient capital," and certainly reflects great credit on the business enterprise and good taste of the manager, W. H. Wiggs. The new warehouse is built according to Mr. Wiggs' own plans and there are many interesting and novel features in connection with it which are a tribute to his ingenuity.

The new structure is built on St. Paul street and is a handsome and substantial four story building. Mr. Wiggs has not been very many years in business but he has built up a rapidly expanding trade and, anticipating further increases, the foundations of the new building have been made to support two additional stories when the growth of trade demands them. The building is divided into four distinct departments separated by solid fire-proof walls. A whole department is devoted to electrical goods and some interesting devices for the display of these goods are now being installed.

The decorations are very handsome, the ceilings being of metal and the painting and graining is in competent hands. When a representative of "Hardware and Metal" called last week the Mechanics' Supply Company were busily employed in moving and it is probable that they are now installed in their new premises.

Plumbing Licenses Illegal.

THE recent decision, by a judge of the supreme court in Minnesota, that laws requiring the licensing of plumbers are unconstitutional, is regarded as a blunder by many plumbers who are earnestly laboring to remove the menace to public welfare that comes from work done by incompetent men. It is possible that the learned judge may have been correct from a narrow legal standpoint, but that he did not rule in the interests of the general public will be the conclusion if the majority of the plumbing trade.

The prosperity generally enjoyed of late years throughout the United States has led to a considerable increase in building, and the active demand for plumbing work has demonstrated the scarcity of first-class plumbers, both among the employers and the employes.

Many men are tempted to add plumbing as a branch of their business, with no other qualification than a desire to make money. These men are apt to hire the handy mechanic, who is not qualified by experience to do plumbing work that would be accepted even by those who would put a liberal construction on what others might consider absolutely necessary to make their work safe. The effort to secure a law requiring these men to pass an examination in order to secure a certificate of competency, and then to take out a license, is undoubtedly to the interest of the general public, notwithstanding the outcry made against the movement by speculative builders, by those who desire to put up cheap buildings, and by property owners who are disinclined to improve their buildings, but are willing to allow the faulty plumbing work in them to menace the welfare of their tenants and of the community in which they are located.

There is no occasion, however, for the plumber to be discouraged at this setback from the courts. The plumbers have maintained for years that their work is closely identified with the good health of the public generally, and it is only necessary for them to work through the local board of health to secure the same objects that they have sought through the legislative chamber. The board of health in almost any of our cities is definitely endowed with power to lay down such regulations as it considers essential to the public welfare. In many instances the plumbers have been satisfied to work in connection with these bodies, and have had the satisfaction of accomplishing the result for which they have been striving. In some cases the feeling has grown that the plumbing trade is of sufficient importance to secure at the hands of the legislature such recognition as will permit the business to be conducted in accordance with laws which the plumbers themselves largely outline and suggest. While strong claims could be advanced for the justice of this stand, unfortunately it is improbable that the public is prepared to concede to the plumbers this important privilege, and objection would likely be raised to their enjoying it unless it came through the hands of the board of health. The plumbers, meanwhile, are to be congratulated upon their enterprise and courage in initiating this reform and also upon the high standard of plumbing work done throughout the United States as a result of their co-operation with the boards of health in the past. While the court decision above referred to should give no ground for discouragement, the plumbers should be careful to insure that any legislation they may succeed in securing in the future is in harmony with the constitution of the state in which it may be enacted.

Building Notes.

The thirteenth annual meeting of the Province of Quebec Association of Architects was held recently at Quebec. The following officers were elected :

President—J. P. Ouellet.
1st Vice-President—S. H. Archibald.
2nd Vice-President—W. Chaussie.
Secretary—J. E. Va ier.
Treasurer—D. R. Brown.
Councillers—L. P. Ismay, A. A. Cox, W. J. Carmichael, J. Z. Besther and J. Venne.

Tenders are being called for the erection of a brick Anglican church at Elmvale, Ontario.

The St. Andrews Presbyterian Church, Vancouver, B. C., have decided to erect a Sabbath school to cost not more than $15,000.

H. C. Stone, architect, formerly of Montreal, has moved to Winnipeg and opened up an office there.

Tenders are being called for the erection of a Y. M. C. A. building at Springhill, N. S.

The Hamilton Times says that owing to the decision of the bricklayers to demand 50 cents per hour in the Spring there will be a check in the building industry in that district. On this account also it is thought that there will be an increase in the number of frame and cement structures.

S. N. Sterling, of Sterling Bros., are starting to rebuild their warehouse at London, Ont., recently destroyed by fire.

Vancouver, B. C., has not only completely recovered from the reactionary period following the boom of some years ago, but its development this year promises to exceed that of any year in its history. During 1903 buildings costing in the aggregate over one million and a half were erected, and appropriations for this year promise to vastly exceed this sum.

The large boiler in the hardware establishment of J. E. Martineau, Quebec, exploded recently, wrecking the cellar and part of the flooring of the storerooms. Four storemen and three clerks were injured, but none very seriously.

RAMSAY'S PAINTS TO PAINT HOUSES

You are in business for profit, so are we.

A poor line of goods may bring you one profit, but will never bring another.

Can't we sell you a "pure" line of goods?

RAMSAY'S PAINTS

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

J. H. WOODS' Advertising Agency, Limited, Toronto, has been incorporated with a capital of $25,000, to engage in the business of printing, publishing and advertising. The directors are: A. L. Massey, J. F. Eby, J. L. Ross, H. Wright, Wm. Dobie, and J. H. Woods, all of Toronto.

Orion Mining Co., Limited, Niagara Falls, Ontario, have been incorporated with a capital of $500,000, to carry on in all its branches the operations of a mining, milling, reduction and development company. The directors are: M. Stewart, L. P. Hyde, I. L. Shank, T. B. Westgate, F. Tacky and S. Grumbine, all of Titusville, Penn.; and T. Canan, Bradford, Penn.

Capital is being subscribed to the A. J. Burton Saw Co., Limited, Vancouver, B. C., for the manufacture of saws and other lumber mill equipment. As soon as sufficient capital has been subscribed application will be made to the Provincial Government for a charter, the capitalization being $75,000. The proposed plant, including buildings, engines and boilers, furnaces, etc., will cost about $27,000.

The John Campbell Co., Limited, St. Thomas, Ontario, have been incorporated with a capital of $100,000, to manufacture and deal in flour, oatmeal, pot-barley, split peas, etc., to deal in farm stock and products, and to manufacture and deal in staves, barrels and bagging. The directors are: J. Campbell, R. N. Price, N. C. Sinclair and D. M. Tait, all of St. Thomas, and N. E. Freeman, Brownsville, Ontario.

The Sydney Cement Company is now being organized for the purpose of manufacturing cement in Sydney, N. S. They are seeking aid from the council in the way of a bonus and exemption from taxation. The company proposes to manufacture the cement from slag, which they will obtain from the blast furnaces of the Dominion Iron and Steel Co. At a special meeting of the council a resolution was passed to the effect that the city secure legislation enabling it to grant a bonus of $10,000 and exemption from taxation to the company. The capital of the company will be $500,000.

Toronto's waterworks system is in a bay way. On Tuesday it was necessary to shut off the water in part of the city. The city engineer says that $1,000,000 must be spent on the system before it will be in the shape it should be. A shortage of supply is threatened, partly due to a fall in the lake level in recent years. The engineer will draw the attention of the works committee to two means of increasing the supply. One is by the cutting of a 6½ foot tunnel across the bay at a cost of $325,000; another is the laying of a cast six-foot steel pipe at $200,000. Either of these would increase the capacity from 26,000,000 gallons per day as at present to over 40,000,000 gallons.

The directors of the H., G. & B. Railway met in Hamilton recently and elected the following officers: President, C. J. Myles; vice-president, W. J. Harris; directors, A. H. Myles, W. H. Myles, Robert Ramsay, R. S. Morris and L. Bauer. George Waller was reappointed secretary and manager. The question of extending the line to St. Catharines was discussed, it being stated that the extension would cost about $35,000 per mile. The president and manager are to confer with the St. Catharines council regarding the matter.

It is reported that a large number of companies operating saw mills in British Columbia are offering their mills and property for sale to the Canadian Pacific Railway Co. The reason they give for this is that the C. P. R. has threatened to go into the lumber manufacturing business in British Columbia for the purpose of supplying the markets of Manitoba and the Northwest. If the company should do so the mill men say that they could not possibly compete with it since transportation for the railway company would be effected at a very low cost.

The Owen Sound Sun says that the Georgian Bay region suffers great loss by exporting all its lumber in the rough instead of in the dressed and finished products. It claims that there is opportunity for vast increase in the number of industries for the converting of rough lumber into finished products of all kinds. The following towns are suggested: Wiarton, Owen Sound, Thornburg, Collingwood, Midland, Penetang, and Parry Sound. Another industry that might be worked to advantage in that district is the conversion of sawdust and waste at the sawmills into useful products such as alcohol, acetic acid and tar. All that is necessary to set these industries into operation is confidence of capital in the feasibility and profitableness of the enterprises.

NOTES.

Thom's Implements Works, Watford, Ont., will be removed to Paris.

The world's production of iron and steel in 1900 was 40,000,000 tons, in 1903, 46,000,000 tons.

A. M. Chisholm, mine owner, Kingston, Ont., has received an enquiry from Germany as to the cost of iron pyrites and graphite.

The name of The Willson Carbide Works Company, of St. Catharines, Limited, has been changed to Wilson Carbide Co., Limited.

The C. P. R. has placed an order with D. J. Coughlin, of Montreal, for 40,000 tons of steel rails to be delivered next summer by the Pennsylvania Steel Co.

Owing to the scarcity of water and the clogging of the flume of the Booth saw mill at Ottawa, sawing has been stopped and the mill shut down temporarily.

Owing to the coal famine, the Canada Furniture Co., the Bell Piano and Organ Co., and a number of smaller manufacturing concerns in Guelph have abandoned operations.

The county council of Cape Breton, N. S., are considering the question of how best the forests of the county can best be preserved from destruction by forest fires or otherwise.

The Canadian Copper Co., Port Arthur, Ont., are going to begin the construction of the branch line of railway from the C. N. R. to the Tip Top mine as soon as possible.

Frederic Nicholls, general manager of the Electrical Development Co., of Ontario, Limited, is asking before February 15 for tenders for 20,000 tons of Canadian or American cement.

J. D. Rockefeller has resigned his position as a director of the United States Steel Corporation. His reason for so doing is that he has been unable to attend the meetings of the board.

The McLaughlin Carriage Co., Oshawa, Ont., are going to establish a sales establishment in Charlottetown, P. E. I., and for that purpose have purchased a large brick building in that town.

The Home Furnishing Co., Limited, incorporated under the laws of the Dominion Parliament, have been granted a license to carry on business in Ontario of wholesale and retail merchants.

minion Parliament, have been granted a license by the Ontario Government to carry on a shipping business in Ontario.

The Big Master Gold Mine, in the Upper Manitou Lake district, has been closed down with no prospect of its reopening. It is controlled by a Buffalo syndicate, and the cause of the trouble is lack of capital.

The Huntsville Rink Co., Limited, Huntsville, Ontario, have been incorporated with a capital of $5,000, to carry on athletic clubs. The directors are C. O. Shaw, J. W. Hart, and J. W. White, all of Huntsville.

The William A. Greene Co., Limited, Waterloo, Ont., have been incorporated with a capital of $50,000, to manufacture shirts, collars and cuffs. The directors are: W. A. Greene, F. S. Kumpf, C. Kumpf, and J. Uffelman, all of Waterloo.

Brantford, Ontario, may offer a bonus to the Iron Bridge and Structural Steel Co., who were refused a bonus by Galt, Ontario, ratepayers. The Galt Reformer says that false statements were used by opponents of the bonus to defeat the bonus by-law in Galt.

The Scott Manufacturing Co., Limited, Toronto, have been incorporated with a capital of $50,000, to manufacture and deal in paper vessels, boxes and all other paper products. The directors are: H. J. Scott, F. L. Ratcliff, and S. J. Douglas, all of Toronto.

The Craig-Cowan Co., Limited, Toronto, have been incorporated with a capital of $20,000, to carry on in all its branches the business of a manufacturer and dealer in leather goods. The directors are: J. T. Craig, H. S. Cowan, and G. F. Adams, all of Toronto.

The Safety Folding Bed Co., Limited, Windsor, Ontario, have been incorporated with a capital of $40,000, to manufacture and sell folding beds. The directors are: I. W. Durfee and H. Blackwell, both of Detroit, U. S. A.; and F. H. Macpherson, of Windsor.

The Crown Brass and Steel Works, Limited, Stouffville, Ontario, have been incorporated with a capital of $40,000, to carry on a general manufacturing and foundry business. The directors are: C. A. Mitchell, J. Heise, F. A. Dalls, G. A. Brodie, and J. F. Lennox, all of Stouffville.

J. S. Dennis, superintendent of irrigation, C. P. R., Calgary, Alta., has invited tenders for the construction of division "A" of the main canal of the irrigation scheme of the C. P. R. near Calgary. About 2,500,000 feet of earth will have to be removed in this portion of the work.

Merrill, the Michigan timber man, says that he is about to erect a large saw mill in British Columbia, shipping the manufactured lumber to the United States. He claims that he can pay duty and make money. Merrill owns 40,000 acres of very choice timber limits in British Columbia.

The John C. Winston Co., Limited, Toronto, have been incorporated with a capital of $40,000, to manufacture and deal in books, maps, charts, etc. The directors are: J. C. Winton, I. T. Johnson and C. F. Vindt, all of Philadelphia, U. S. A.; J. Flynn, A. H. Sinclair, and F. C. Bull, all of Toronto.

Canada Linen Works, Limited, incorporated in Nova Scotia, has been granted a license by the Ontario Government to operate and maintain in Ontario mills and factories for the manufacture of linen, woollen, cotton and textile goods of all kinds. The company shall not use a larger capital than $500,000.

The Toronto council has accepted the tender of the Lakefield Portland Cement Co., Lakefield, Ont., for the Lakefield brand of cement at $1.84 per barrel of 350 pounds. They could have obtained the Edison Portland cement for $1.73 per half barrel, but preferred to give 11c. per half barrel more for the Canadian brand.

Nagle & Wills, who have the contract for the government buildings at Woodstock, Ontario, have formed a general business to open up in business in Ingersoll, Ontario, as dealers in coal, brick, sewer pipe, plaster of paris, cement, etc., and to manufacture mantles, wood grills, etc. The firm will continue their contracting business.

BUILDING PERMITS ISSUED.

TORONTO.

J. Westcott, three attached three storey brick dwellings on Fuller street, to cost $3,000.

C. A. Drummer, two pairs semi detached brick dwellings on Spadina road, to cost $8,000, and a two storey brick dwelling on Dupont street, to cost $2,500.

PLUMBING NOTES.

L'Ecuyer & Daniel, plumbers and roofers, Montreal, have registered.

Remillard & Paquin, proprietors of a foundry, Grand Mere, have registered.

Gagnon & Larin, plumbers, Montreal, have registered.

P. Sicard, plumber, Montreal, is offering to compromise at 25c. on the dollar.

On January 27 the Jas. Morrison Brass Mfg. Co., Toronto, beat the Manufacturers' Life Assurance Co., Toronto, at hockey. The score was 8 to 1. Jas. Morrison Brass Mfg. Co. also beat Eby, Blain Co., on January 29, the score being 5 to 1.

LOW TENDERS ON CEMENT.

Toronto council let its contract for cement on Thursday last week, accepting the tender of the Lakefield Portland Cement Company for the Lakefield brand at 52¾ cents per 100 pounds, which is $1.84½ per barrel of 350 pounds. Last year the City of Hamilton paid $2.10 net. Toronto could have got Edison Portland cement, made in New Jersey, at $1.73½ a barrel, but preferred to pay 11 cents a barrel more for the Canadian article.

Will Hold Up a Shelf!

That's what a shelf bracket is for.

For this purpose there can be NOTHING BETTER, NOTHING CHEAPER than the BRADLEY STEEL BRACKET. It is well Japanned, Strong and Light. The saving in freight is a good profit, aside from the lower price at which the goods are sold. Order direct or through your jobber.

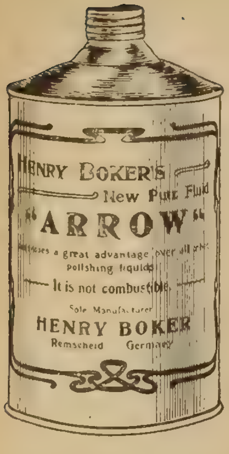
Carry the **"Morrison" Gas Arc Light.** It's the best lamp proposition ever offered to the trade, since it gives the most light for the least cost, and offers splendid profits to the dealer.

JAMES MORRISON BRASS MFG. CO.
Limited,
TORONTO, ONT.



A TRIAL WILL PROVE THAT

Henry Boker's PUTZ FLUID YELLOW LABEL "Arrow Brand"

is the best to clean all sorts of Brass, Nickel, Copper, etc. Can be had in all sizes of tin cans and glass bottles.

For Sale by Wholesale Trade.

CURRENT MARKET QUOTATIONS.

February 5, 1904.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

WHY sell Old Style Cork Screws?

The People Want

WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

"THE REAL" SAFETY RAZOR IS A SELLER

OUR CONDITIONS ARE : Give to likely customers to try and if not absolutely satisfactory return it.

AGENTS FOR CANADA:

RICE LEWIS & SON, Limited, Toronto.
CAVERHILL, LEARMONT & CO., Montreal.

A New Kind of Razor

You'll be surprised at the way "The Real" Safety Razor shaves—*different* from any other razor.

It shaves clean and keen—smooth and easy.

It doesn't pull or break hairs.

"The Real" is the only perfect razor for *self-shaving*.

The *rigid handle* and the *anti-cut guard* make it better than the ordinary razor—*better control of the blade* on *face, strop* or *hone*—*quicker work* possible—*no cutting*.

It's better than other "safety razors" because it's a *razor*—not a hoe. Made of the *very finest* razor steel—*full concave*—2¼ in. blade.

SISAL,	500	"	"	"

Blue Ribbon is no doubt the Queen of Binder Twine. It runs six hundred and fifty feet to the pound, and is manufactured from most select Manila Fibre. Six hundred and fifty foot Twine is the only Twine manufactured entirely from Manila Fibre. Dealers should beware of so-called "Manila" Twines which are advertised to measure less than 650 feet to the pound. They are mixed Twines.

Shake The Tree — There's Money In It

Different ways of getting fruit.

Some ripens and falls—just naturally.

Some is picked.

For the balance you must shake the tree.

Different ways of getting business, too.

Some just comes your way naturally—(nowadays very little comes this way).

Other business you send your travellers out to "pick."

A lot more of it you have to advertise in HARDWARE AND METAL to get.

This latter kind is worth having, too—there's money in it.

American Watches.

RETAIL PRICES, **$1.25 to $2.50**

ARGUMENT.

We now offer a practical time piece for the Hardware Trade of Canada, and base our statement upon the following:

First—It is absolutely guaranteed to keep accurate time.

Second—It stands rough usage and does not get out of order easily, making it the only watch for dealers outside of the jewelery trade to handle, and also making it a practical one for sportsmen, boys and all men who give a watch hard usage.

Third—Its low price and high quality insure a tremendous sale, which we further augment by furnishing many handsome advertising devices for your store.

Fourth—Last but not least, these watches offer a handsome profit. Price cutters are not supplied.

Sold by several leading Hardware Jobbers of Canada. We will tell you who they are upon request.

Trial Offer—To any Hardware Dealer who will write to us upon his business letter head and inclose 75c. we will send a sample watch (duty not paid) and our catalogue, so that he can test its accuracy and durability.

KEMP MANUFACTURING CO., TORONTO, CANADA.

EASTERN MANUFACTURED GOODS AND THE GREAT WEST

SOME VIEWS OF WESTERN MERCHANTS

"As you are already aware, the recent visit of the Canadian Manufacturers' Association to the West was partly with a view of studying the trade situation. Since their return you have no doubt noticed in our papers that a number of them have been giving their impressions of the Great West.

"It would be now interesting to know what in the opinion of yourself and other business men of the West can be done in order that the manufacturers and others in the East may secure the business that now goes to manufacturers in the United States."

THE above is a copy of a letter sent by Hardware and Metal to a number of merchants in Manitoba and the Territories. Several replies have been received, and those which are here with printed should prove interesting to business men who are interested in the trade possibilities of the great West.

S. K. Colquhoun, of Montgomery & Colquhoun, Delorain, Man.

In response to your letter re the sale of United States goods in Canada and how the business may be secured by Canadian manufacturers, we beg to subjoin the following, which, in our opinion, after 16 years' business in Manitoba, dealing directly with the farmer, are some of the reasons why the foreign manufacturer finds a market for his goods in Western Canada. The question of how we are to prevent the people buying such goods we will touch later on. I think it will be readily conceded that an individual or community will not continue to buy goods from any place or person, giving such goods a preference, unless the goods in question have merit, either in less out lay of money, or superiority in the construction or texture of the articles.

In the village in which I do business, which may be taken as an average Manitoba town, marketing about one million bushels of wheat annually, I find that the principal articles imported from the United States are binders, wagons, ploughs, threshing machines and stoves. After careful investigation I find that the American binder is sold for $15 more here than is the Canadian, the American farm wagon for $10 more than the Canadian wagon, dealers having both kinds in their warehouses. And they state that they sell two American for every one Canadian wagon, and at a higher price. One naturally asks why? To any man of experience, the reason must be found in the fact that the people believe they are getting a better article. This is the unanimous opinion of the people, else they would not continue to buy an increasing amount of merchandise, at a higher price, did it not pay them to do so.

How, then, are the Canadian manufacturers to retain our markets? By making better goods. We prefer to buy the home product. In the first place let them copy, if necessary, from people who have been making agricultural machinery for a prairie country before we knew anything about prairie. Secondly, let them reduce their profits to the minimum, to compete with these people. they, we think, should be able to compete with the preference they have over the American manufacturer. If they cannot get the trade in this way they could by a high tariff. The question to be solved is, is it worth while shutting out these goods that the people evidently want to level up our manufacturing interests. This the people have to decide.

We may say, we, the retail merchants, would like to have the Legislature of Manitoba protect us by shutting out by a tariff Eastern goods shipped in by Eastern retailers. But we do not think the people would stand it. Nor do we think it would be in the best interest of all the people, any more than would it be to shut out all foreign made goods in manufactured articles.

Did the Canadian to-day make as good an article he would have his market. I again point out, it is not a question of price, but of quality. Some reason must be assigned. This is the obvious one.

In my store I sell German goods, Britsh goods, Swiss goods, and American goods. My patrons demand the selection. Each country can do some things better than another and natural laws govern trade as everything else.

Maybe Canada has not yet learned all about manufacturing. Let us hope she may become increasingly efficient and enjoy more and more of the trade which should belong to her.

H. R. Foulger & Co., Lacombe, Alberta.

The manufacturers of the States have hitherto secured an equal share, at least, of the business of the West, in the lines in which they had a chance to compete, because, in some cases, they had better goods, and have still, though not to the same extent, and because they were aggressive from the start and advertised more extensively, but mainly because of the inability of the Canadian manufacturers to handle the business, lacking, as they did, the capital, plant, push and men. Eastern manufacturers have had all they could do to fill our orders.

What would have been the state of matters were no goods admitted from the States, and orders to Eastern manufacturers were increased by one hundred per cent.? The progress of the West would have been delayed, which would probably have raised the question if the West was any good after all, instead of being as

it is, the assured factor that gives the whole Dominion its magnificent potentiality.

The imports of manufactures from the States have been our blessing and salvation, and without them we might have had crops which we could neither harvest nor market.

But with increased railway facilties, and the confidence of capital and men of the East, we shall become less dependent on our neighbors, and may without injury, but rather profit to ourselves, adopt a policy that will elimin ate foreign competition.

But it must not be forgotten than we want good goods, better than we are even yet getting from the East, and that our manufacturers must have adequate capital to push their business against all comers, and have confidence in their country. Our best farm wagons to-day come from the United States, and they command a 20 per cent. higher price than the Canadian article. Other instances could be given. And until our manufacturers realise the fact that we want the best goods at right prices we cannot ask a co-operating policy on the part of our statesmen, to oust our genial neighbor from the market.

The Regina Trading Co., Limited, Regina, N.W.T.

In reply to your letter asking our opinion on what "can be done in order that the manufacturers in the East may secure the business that now goes to manufactures in the United States," we beg to say that in our opinion the quickest and best way to secure that trade is by establishing a distributing station at some point in the West.

This country is rapidly developing, and along with that development is a demand for a better class of goods, than has been used by the pioneers, larger stocks and quicker service. The large Canadian implement firms have recognized this, and are following close on the Americans in the establishment of large Warehouses with complete stocks.

There is not as much sentiment about business in the West as in the East, but on an equal basis, both merchants and farmers will give the Canadian manufacturers the preference.

Baker & Skelding, MacLeod, Alta.

In as far as implements go we find the farmers here prefer the American manufactured article for the reason that they build their goods to suit this Western trade, while the Canadian manufacturers have not as yet grasped this most important fact in all products of their goods. Some goods that are suited for this trade and are being pushed by the dealers, are as soon as they are well distributed, raised in price until they cost as much as the American implements to which they are inferior by means of poorer material. For instance a Canadian ploughshare manufactured from Canadian steel is much softer and will not wear more than half as long as one of American manufacture. And yet the dealers are charged as much for the Canadian inferior steel as they pay for the better article, duty added.

It is our wish to only sell Canadian goods but the interests of our customers compel us to handle American goods until the Canadian manufacturers get a better grasp of this trade.

Merrick, Anderson & Co., Winnipeg.

As a rule we find the American manufacturers pay more attention to the finish of their goods; also appear to be in closer touch with their customers as to patterns and styles most suitable for the different localities.

After all, however, the great question is one of price, and if past experiences of business depression in Presidential years is confirmed the coming season, it will be necessary, especially on some lines of stoves, to reduce present prices. Th question, however, can hardly be answered in general terms, as each line presents special problems of its own.

Babb & Kirkland, Portage la Prairie, Man.

Replying to your circular letter re the securing of our Western business to the Eastern manufacturers:

1st. In some instances the Eastern manufacturers should reduce prices in order to combat American competition.

2nd. In other cases, better class, and quality of goods should be manufactured to supply the home market, and thus avoid the necessity of the retailer importing.

3rd. In cases where the tariff is really too low, and bears hardly on the Canadian manufacturer, making it impossible for him to meet foreign competition, let the tariff be adjusted so as to afford reasonable protection.

4th. Again in particular cases it might be found workable to make the tariff retaliatory.

5th. Adjust the tariff from time to time to meet new conditions.

Curry Bros., Innisfail, N.W.T.

Induce the Government to regulate the tariff, and the manufacturers to supply equally as good articles at the same prices.

H. S. Price, Boissevain, Man.

I would certainly like to see the Canadian manufacturers get a big share of the Western trade, but some of them will have to do different, or they will lose the trade they now hold. I know for a fact that the retailers would strongly indorse placing some lines on the free list, as the goods I have in view are only fit for a Jew trade.

The greatest trouble has been in getting goods of all lines, then again, had it not been for United States goods this past season we would have been in a deplorable state, as our own makers advanced their prices to such an extent, that we were making a far better profit by buying United States lines.

If the manufacturers will carry the stocks and not bull the market when they have the chance, I think they can more than hold their own.

CATALOGUES, BOOKLETS, ETC.

HARDWARE AND METAL would be pleased to review catalogues, booklets or other such publications issued by manufacturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. No charge will be made for these services.

ICE CREAM FREEZERS.

It will soon be time to devote attention to ice cream freezers and the hardware trade will desire to secure information to enable them to decide what freezers to carry. The North Bros. Mfg. Co., Philadelphia, have their 1904 catalogue ready for distribution. In it are all exterior and sectional drawings of the hand and machine freezers which have made each such an enviable reputation for this firm. Copies of the booklet will be sent to Hardware and Metal readers on request.

A CHANGE MAT FOR THE COUNTER.

Henry Boker & Co., McGill street, Montreal, are working a clever advertising scheme, and giving the trade a useful and attractive article for their counter. Nothing is more unsatisfactory to a customer than to pick up small change from a rough, and sometimes, a blackened counter, which is impossible to avoid in a hardware or manufacturing establishment. This firm are sending out to the trade a neatly made felt mat on which change can be put down by the salesman. It is always clean and soft, and an advantage to the salesman. A number have been sent out, and in case there are any Hardware and Metal readers who have not received one, a postal card to the above address will no doubt bring a prompt response.

"HURON CHIEF" RANGES.

The Western Foundry Co. Wingham, Ont., have ready for general distribution an excellently illustrated catalogue of their hotel ranges. The following extracts from the introduction will serve to show the purpose of the book: "On its pages will be found a fair illustration of the different sizes and styles of ranges which we are manufacturing. We have in our company two members who are experts at designing, planning and laying out of kitchens, whose knowledge and experience is at the service of anyone requiring same, and we shall be pleased to submit estimates, plans and specifications for the complete outfitting of kitchens, bakeries, etc., upon receipt of a request for same. We warrant and guarantee satisfaction, and are willing to place them with any responsible party requiring one on 30 days' trial." Readers of Hardware and Metal can secure this book by writing for it.

A CIRCULAR RE AXES.

The Dundas Axe Works, Dundas, Ont., have issued the following circular: "We beg to advise you that we are entirely free from all entanglements caused by an arrangement as to prices between axe makers and jobbers; and are free to sell our own goods in our own way. We are making better goods than ever before, and at lower prices, and confidently ask for a share of your trade. Our travellers are out with samples and will wait upon you in plenty of time to insure early delivery of axes for next Fall's trade. We will be pleased to have you wait to see what they have to offer you."

A TRIO OF DESK CALENDARS.

W. J. Copp, Son & Co., manufacturers of "Empire" stoves, ranges and furnaces, Fort William, Ont., have issued a trio of small desk calendars which will be appreciated by those who receive them. Above the calendar pad of each is a three-color engraving, all of these being exceedingly attractive. Readers of Hardware and Metal in Northern Ontario and the West are invited to send for these calendars.

It's Quality that Counts in Varnish.

Quality is the first essential to success in varnish selling. Only quality counts in the end. It's the repeated sales that bring success.

The Sherwin-Williams Varnishes will bring a customer back again, and again, and yet *again*. They are "fine varnishes" in every respect.

Their quality creates confidence and confidence produces profit.

If you want most varnish business and greatest varnish profits write today for prices of The Sherwin-Williams Varnishes.

Business Changes

ONTARIO.

THE Roche, Danford Co., departmental store, Newmarket, have advertised their hardware department for sale.

H. Metcalfe, harness maker, Guelph, is dead.

P. Cameron, general merchant, Dutton, is dead.

W. P. Kearns, harness maker, Toronto, is dead.

T. P. Bell, hardware merchant, Beeton, has advertised his business for sale.

A. Rumford, dealer in stoves and tinware, Guelph, has sold out to Oecomore & Co.

D. P. J. Tobin, general merchant, Lancashire, has assigned to J. A. McLean.

G. Hutchison & Co., general merchants, Collingwood, have sold out to J. H. Hamilton.

The premises of Maxwell & Johnson, plumbers, Toronto, have been damaged by fire. Loss covered by insurance.

Buchanan & Penstone, dealers in hardware, stoves and tinware, Barrie, have sold their hardware business to Hambly & Baker.

J. W. Hunt, general merchant, Dorchester Station, has sold out to McDonald & Beedle.

QUEBEC.

Jones & Henry, painters, Montreal, have registered.

Z. Berard, general contractor, Montreal, has registered.

A. Daoust, harness maker, Montreal, is offering his business for sale.

W. C. Ross & Co., dealers in electric supplies, Quebec, have registered.

Abraham Prince & Co., general merchants, Iberville, have registered.

P. Sicard, plumber, Montreal, has compromised at 25c. on the dollar, cash.

Demand of the assignment of E. David, contractor, Longueuil, has been made.

L. Carriveau, general merchant, St. Anne de Beaupre, has assigned to V. E. Paradis.

A meeting of creditors of N. Tremblay, general merchant, St. Irenee, in announced.

G. Tuck & Co., manufacturers of asbestos mill supplies, Montreal, have dissolved partnership.

A meeting of creditors of C. Brault, general merchant, La Macaza, was advertised for 9th inst.

T. Fournier, general merchant, Cedar Hall, has assigned, and V. E. Paradis been apointed provisional guardian.

S. Peters, proprietor of planing mill, Quebec, has called a meeting on 15th inst. for the appointment of a curator.

Girard & Dubois, general merchants, St. Chrysostome, have dissolved partnership. O. Dubois continues in business.

The Montreal Product Co., manufacturers of oil, grease, etc., Montreal, have registered.

The premises of T. Lidstone, carpenter and builder, Montreal, have been damaged by fire. Loss covered by insurance.

J. A. Renaul, general merchant, St. Ephrem De Tring, has assigned, and V. E. Paradis been appointed provisional guardian.

A. Desmarteau has been appointed curator to J. A. Lamarche, proprietor of a planing mill, Montreal, and a meeting of creditors has been held.

The premises of J. Cosgrove, McCallum & Lanaise and J. Thompson, general merchants respectively, all of Buckingham, have been destroyed by fire. Loss partially covered by insurance.

The petition of Wm. Clendenning & Son, foundry and stove manufacturers, Montreal, for an extension of delay for a meeting of creditors to February 18, in order to appoint a curator, has been presented and granted.

NOVA SCOTIA.

J. C. McKinnon, contractor, Old Bridgeport, has assigned.

A. B. Atkinson, general merchant, Minudie, has made an assignment.

NEW BRUNSWICK.

G. Stothard, hardware merchant, Chatham, is adding a crockery depart-

MANITOBA AND N.W.T.

E. Schell, harnes maker, Mather, has sold out.

P. Anderson, general merchant, Stirling, has assigned to R. S. James.

C. D. Bemrose, harness maker, Neepawa, has sold out to R. S. Horne.

T. B. Rehill, harness maker, Emerson, has sold out to W. J. Scarth.

H. Baldwin, carriage maker, Morden, has been succeeded in business by J. J. Bieber.

Berry & Greenwood, general merchants, Douglas have advertised their business for sale.

Riddell Bros., general merchants, McCreary, have been succeeded in business by P. Riddell.

W. G. McLaren, general merchant, Souris, has sold their Elgin branch to R. E. Sadler.

G. Rothwell, harness maker and implement dealer, Frobisher, has sold out to E. A. Dalquist.

Horne Bros., harness makers, Dominion City, have dissolved partnership. L. K. Horne continues in business.

The stock of the estate of T. E. McGirr, general merchant, Morden, was advertised for sale on 8th inst.

Carruthers Bros., general merchants, Creelman, have advertised their general stock for sale, but continue in the hardware business.

MACHINERY

THE MACHINERY MARKET.

Quebec.

Office of HARDWARE AND METAL.
232 McGill Street.
Montreal, February 10, 1904.

GENERAL business this last week has not been so active as was expected. To account for this condition of affairs, various explanations are given. Many machine men ascribe it wholly to the snow blockade which has interfered so much with business in other lines. Mails from branch lines are delayed and numbers of enquiries may be still on the way. The blockade has stopped deliveries almost entirely. Customers write that they do not want their machinery shipped as even were the railroads to make delivery they would be unable to get it carried over the country roads. The blockade made the total amount of sales credited to January smaller than usual this year as sales cannot be credited nor goods invoiced until shipment is made.

While trade in many other lines remains slack, there is a continued activity in engines and boilers. Sales of engines and boilers of small size have been large and for engines of very great horse-power there are some enquiries, as several buyers are now on the market. American houses are after business in this line and are said to have made some concessions in price in order to secure it, but Canadian manufacturers do not seem to be alarmed. They have plenty of business on hand and they are making good sales at firm prices. Hence they are not disposed to make any reductions.

In machine tools there has not been much activity during the last week. Some good sales were noted in our last issue, but this activity has been folowed by a temporary lull. A few buyers seem still to be affected by reports of American competition in machine tools although the evidences multiply that prices are being maintained.

In wood-working machinery there has been some activity, but it has not been so great a feature of the market as it was a week ago. No doubt the snow blockade has been in a measure responsible for this falling off as it has interfered with business in the saw mills. A few enquiries are still coming in from sawmill owners but they are not so numerous as formerly.

Power transmission appliances are in fair demand at present and indications point to an improvement later.

Andrew Young, Montreal, reports a good demand for shafting and pulleys. Power transmission machinery is being enquired for by many buyers.

Robert Gardner & Sons, Montreal, state that they are fairly well satisfied with the way business has opened out this year. Engines have been enquired for by many buyers and some good sales were made last month. In shafting there is a good outlook.

The Dodge Wood Split Pulley Co. have been doing a good business through their Montreal agents, the Laurie Engine Company.

Alfred Rubra, of the Machinery Exchange, Montreal, says that business conditions this week are much the same as last. There is no cause for alram at a slight falling off in enquiries as machinery trade has a fashion of fluctuating.

Ontario.

Office of HARDWARE AND METAL.
10 Front street east.
Toronto, February 13, 1904.

The machinery market has been quiet this week, one of the reasons given being the block on the railways. The features are very similar to those of last week. The actual amount of business done is small, but there have been a considerable number of enquiries in many lines. From the nature of the enquiries there still appears to be a good demand for boilers and engines, and their equipments. Also the demand for machine tools makes a fairly good showing, although it is not up to that of last week. Enquiries for wood-working machinery have not been numerous this week, nor does the market for this class of machinery seem to be improving any during the last three weeks. The market for electrical machinery still continues slack, although the demand seems to be fairly good considering the number of enquiries dealers are receiving. The enquiries for gas and gasolene engines have been fair, and promise some orders in the near future. The number of orders placed this week, however, has been small.

The Levy, Weston & McLean Machinery Co., report that trade has been quiet in nearly all lines of machinery, because principally, of the railways being tied up. Enquiries for engines and boilers have been frequent, showing that the demand for that class of machinery still continues good. The demand for wood-working machinery shows no improvement over last week.

The A. R. Williams Machinery Co. say that market conditions are unchanged since last week. The actual amount of business has been small in nearly all lines, but the number of enquiries have been encouraging. The demand for engines and boilers continues good, and iron-working machinery shows up fairly well. Electrical machinery excites no more interest than it has done during the foregoing weeks.

The Jones & Moore Electric Co. report no change in the situation of the market. Enquiries continue to come in well, and the aspect of the market for future placing of orders is good.

Sherbrooke, P.Q.

Machinery men in Sherbrooke seem well satisfied with the manner in which the year's business has commenced. The Jencke Machine Company find business very brisk in all their various lines. The Canadian Rand Drill Company have made some large sales of their mining machinery and report prospects very bright.

MACHINE TOOLS AND HIGH SPEED STEEL.*

FOR a great many years tool steel was dependent upon carbon for its hardening qualities and attained its hardness through a delicate heat treatment and sudden cooling, a process requiring great precision and tool dressing was regarded as the pinnacle in the blacksmith's art. Great care had to be exercised to prevent overheating and drawing the temper from the cutting edge.

Since the discovery of self-hardening steel and high speed steel, the former containing some carbon but the latter none, which must be run at a high temperature for best results, and which will do an amount of work impossible with carbon-tempered steel, the machine shop superintendent has undertaken to increase the output of the shop by speeding the machinery and taking heavier cuts.

However, he has met with serious obstacles in the machines themselves since they will not stand the strain necessary to get maximum results from high speed steel, the machine stalls or some other part gives way. It is a fact that no machine shop is to-day fully equipped with machine tools which can use high speed steel to the limit of its indurance, nor is there any machine tool maker ready to furnish all classes of tools capable of obtaining maximum service with high speed steels. Makers are only commencing to build machine tools of the necessary weight and strength and then they are produced at an increased cost of up to 50 per cent of the ordinary tools. One maker in bidding on lathes and planes, the specifications of which called for lathes that should cut 1-2-inch, with 1-8-inch feed, 30 feet per minute, and that the planers should cut 5-8-inch, with 1-2-inch feed,30 feet per minute in mild steel, said that there were no such tools made, but that they could be built at an increased cost of 50 per cent over ordinary tools.

The question naturally arises as to what shall be done with the large numexactly out of date, but which are not sufficiently strong to be used with high speed steels. In a great many cases they can be speeded up, and with moderate cuts the output of the tool largely increased, but it is found that belting commences to give out, and the cast iron gears break. It is possible to replace the cast iron gears with steel, but then the machine will give way in some other part, and will be finally wrecked. Then the cost of the repairs to belts and the replacing of worn-out ones must be taken into consideration.

However, there is a great saving in the use of high speed steels with ordinary machines without increasing the speed or cut. This is due to the fact that the high speed steel will do much heavier work without regrinding, and thus the machine need not be stopped in the middle of an operation in order that the tools may be ground. This quality is a most valuable one, and will do much to increase the output.

It depends entirely upon circumstances whether it would be profitable to continue the use of tools not capable of maximum output as calculated to-day, or whether it would be profitable to reconstruct such tools to give greater speed. Where the output of a tool is in such demand, that it is worked to its limit of capacity, and to increase the output of the shop necessitates the purchase of another similar tool, it would be advisable to get rid of the old tool and purchase one of up-to-date design, capable of maximum output. The single tool of modern design would more than make up its cost in extra work done. On the other hand where a tool is not busy all the time it would not be profitable to spend more money, where increased capacity would mean increased idleness. Considering the latter proposition, increased speed can be obtained in most cases by increasing the speed of the countershaft, but great care must be taken not to tax the old tool beyond its endurance. Generally speaking it is advisable to purchase a new tool if it can be shown that 20 per cent. of its cost can be saved per year over and above the output of the old tool, but of course that statement should be modified to suit the conditions.

Up to the present time high speed steels have not given much success in fine work where a heavy cut cannot be taken, nor do they make good finishing tools, the reason being that the high temperature of the point of the tool necessary for good work cannot be maintained on fine cuts, and also when maximum work is being done by the tool the cutting edge is somewhat blunted and does not make a smooth job.

Among the economics attained by the advent of high speed steel are: Forgings do not have to be finished so closely to make them work up economically, resulting in the lessening of the cost of blacksmith work; harder cast iron can be used, resulting in greater wearing qualities, tires can be turned with a minimum loss on account of being able to cut closer under the skin.

Among "Letters From Practical Men" in the American Machinist is one from H. Hugh dealing with high speed steels is of interest. The data he has collected makes what he has to say on the subject of considerable value to users of machine tools. He says that high speed steels have received so much attention recently that we might be led into the error of blieving that they had generally superseded the carbon steels for all shop purposes. However, he says that they have not done so, chiefly because of the high price demanded for them. He has, however, collected some data illustrating cuts made by high speed steels under different conditions, and he thinks that these prove that, although the initial cost of the high speed steel is considerably greater than that of carbon steel, the saving on the increased production more than pays for the difference in the first cost. The following figures were taken from operations on machinery steel, the cutters being well supplied with oil from circulating pumps. In the examples of milling given the cuts were short, in no case exceeding 2 1-2 inches in length, making the handling a large factor, and thus accounting for the prices not being reduced in the same ratio as the speed was increased.

(1) A pair of 3 1-2-inch straddle mills beveling the edge of sheet stock 150 inches thick; cut, 2 1-2 inches long; speed, 247 feet per minute; feed, .033 inches per revolution or 7.8 inches per minute; cost of prices reduced from 40 to 28 cents per hundred.

(2) Cutter, 1-4x3 inches; speed, 205 feet per minute; length of cut 1 1-4 inches; depth of cut, 1-4-inch; feed, 7.8 inches per minute; cost of pieces reduced from 60 to 40 cents per hundred.

(3) A face milling cutter, 3 1-2 inches diameter; speed, 207 feet per minute; feed, 7 inches per minute, with work feed parallel with face of cutter giving large arc of contact; cutter and work both highly heated; chinks blued; cost of parts reduced from 60 to 40 cents per hundred.

*An extract from a paper read by J. A. Carney before the Western Railway Club.

Some people raise money by raising cheques, then the drawer of the cheque raises Cain, because he has to stand the loss, whereas the simple precaution of using

A Canada Cheque Protector

would prevent alterations of a cheque and protect it from being changed to a larger amount.

(4) A pair of 3 1-2-inch straddle mills, speed, 270 feet per minute; cut, 3-4-inch long; hand feed; cost of parts reduced from 15 to 10 cents per hundred.

(5) Forming tool on automatic screw machine operating on 1 1-2-inch stock at a surface speed of 130 feet per minute; width of cut, 1 1-8 inches and a reduction of 1 inch in 80 seconds gave a production of 3 to 1 in favor of high speed steel.

The facts and figures given above were taken from every-day practice, and are not the result of tests where the speed was increased only for the time the tests were on.

The cost of the cutter of course was greater than if made from carbon steetl, but in no case did it require more than the sawings on a five-day run to place the high speed steels on an equal footing with the carbon steels. After that time the savings made by the high speed steels would be clear gain.

Large Order for Corundum.

Mr. W. C. Fay, manager of the Cortland Corundum Wheel Co., Cortland, N.Y., was in Toronto last week. While here he made arrangements with the Canada Corundum Co., of Toronto, to supply his firm with 450 tons of Craig mine crystal corundum to be used during the coming year. Mr. Fay states that the demand for wheels made from this Canadian product has grown to such an extent that their present factory at Cortland, N.Y. is altogether inadequate to supply the demand and they are now about to erect a new factory and instal a number of kilns in order to make wheels by the vitrified process.

Machinery and Electrical Notes.

The White Bear Mine, near Rossland, is putting in a twenty-drill compressor, the machinery for which is already on the ground.

Work has commenced on the stringing of the wire on the power line extension of the Cascade Water, Power and Light Co., B.C., from Phoenix to the Greenwood smelter.

The repair shops of the Hamilton and Toronto Electric Railway will be situated at Toronto Junction. It is said also that the headquarters of the company will also be situated there.

The foreman of the wood-working department of the Dodge Manufacturing Co.'s plant at Toronto Junction, met with an accident recently which necessitated the amputation of his little finger.

A Shay locomotive, the third within a short time, has been added to the ore-hauling equipment of the C.P.R. on the Phoenix (B.C.) branch. This locomotive is to assist in the traffic of the Granby mines.

Plans are now being prepared for the remodeling of the concentrator at the Slocan Star mine, near Rossland. It is proposed to lay out over $10,000. There will be six new wilfeys added to the equipment beside other machinery.

Toronto Junction is to be the headquarters of the Niagara Falls Power and Electric Co. Land has been purchased on the Scarlett estate as a site for the sub-powerhouse which is to be erected for the dissemination of the electric current from the Falls.

A company is seeing incorporation from the Dominion Government for the purpose of building an electric railway from Brantford to Hamilton. The proposition is also to transmit electrical energy over the right-of-way, and distribute it to the municipalities to be traversed by the line.

The Canadian Steam Boiler Equipment Co., Limited, Toronto, have been incorporated with a capital of $75,000, to manufacture, buy and sell steam boilers, furnace and boiler equipments. The directors are: J. D. Macdonell, C. W. Laker, both of Toronto; and John Ellis, York Township and county.

Victoria Cement and Power Co., Limited. Lindsay, Ont., have been incorporated with a capital of $500,000, to manufacture and deal in Portland cement, and to generate and transmit electric energy. The directors are: J. Carew, Wm. Flavelle, J. P. Cummings, R. J. McLaughlin, and J. B. Parkin, all of Lindsay.

On May 17, there will be sold by public auction in the court-house, Ottawa, all the mines and mining rights of the Wakefield Mica Co. in the Township of Wakefield in Quebec. There will also be sold a large quantity of mining machinery, consisting of an electric pump, motors, belting, shafting, derricks, drills, blacksmiths' tools.

The Petewawa Power Co., Limited, Toronto, have been incorporated with a capital of $250,000, to construct and operate works for the production and distribution of electricity for purposes of light, heat and power. The directors are: D. Donald, M. Punshon, V. Voort, C. H. McArthur, T. B. Robertson, and Mrs. Dawson, all of Toronto.

The Empire Power Co., Limited, Owen Sound, Ont., have been incorporated with a capital of $500,000, to construct and operate works for the production, sale and distribution of electricity for the purposes of light, heat and power. The directors are: J. M. Kilbourn, F. H. Kilbourn, G. S. Kilbourn, and H. B. Smith, all of Owen Sound; E. A. Peck, Peterborough.

The report of the commissioners of the Temiskaming and Northern Railway shows a total expenditure during the past year of $1,842,451 on construction and equipment. The chief sources of the outlay were: Engineers' construction, $1,156,527; rails and fastenings, $326,103; rolling stock, $73,799; ties, $65,425; ballasting, $37,799; pay rolls, $40.098; telegraph line, $9,489; track laying, $20,579.

Electric and Train Lighting Syndicate, Limited, Montreal, have been incorporated with a capital of $150,000, to deal in patents and rights pertaining to electrical and mechanical inventions, to manufacture and deal in electrical and mechanical devices, and to carry on the business of train lighting. The directors are: J. H. Plummer, Toronto; R. A. Ross, W. G. Thorsby gnd W. C. J. King, all of Montreal.

C. F. Jackson, of the Vancouver Engineering Works, Vancouver, B.C., has just returned from the Old Country where he has been making arrangements for the increasing of the capital of the Vancouver Engineering Works. As a result of this increase of capital large extensions and many improvements are planned, and will be carried out, Mr. Jackson says, in the near future.

The Mayor of Guelph has received a communication from the well known firm of John Ross, Sons & Co., manufacturers of engines and other machinery, Brampton, concerning the establishment of a branch of that plant in Guelph. They intend extending their business and think that Guelph would be a suitable place for a branch factory. The firm have extended an invitation to the Mayor to visit their works in Brampton.

The town of Springhill, N.S., is calling for tenders for the supplying and complete construction upon a foundation already completed, of a steel storage tank, for the water works, which is to be 25 feet in diameter and 50 feet high according to specifications which will be mailed on application to the Town Clerk Springhill, N.S., or which may be seen at 164 Hollis street, Halifax, or at the office of John Galt, consulting engineer, Canada Life Building, Toronto. Tenders will be received up to February 20.

A steam locomotive recently completed in Dusseldorf, Germany, for use in fac-

tories which handle high explosives in bulk carries no fire with it. On the contrary, the steam is generated outside of the building, and the boiler of the locomotive charged with it, the operation requiring about half an hour. It is then able to operate for several hours, after which the recharging, for obvious reasons, occupies only about 15 minutes. It is said to be only one-half as expensive in operation as the ordinary locomotive.

B. Malhiot resident engineer at Winnipeg, of the Department of Public Works, is calling for tenders for the construction of a marine boiler to take the place of the present one of the tug Sir Hector at West Selkirk, Man. The outside diameter is to be 72 inches, the length 12 feet 2 inches, it is to be lap jointed, double riveted, it is to have 2 flues 12 1-2 inches by 4 feet 6 inches, 3 flues 10 inches by 10 feet, the thickness of plate to be 7-16 inches; and is to be built for a working pressure of 150 pounds to the square inch. Tenders will be received until February 16, the boiler to be delivered by May 1.

The following companies are proposing to unite in the formation of a hydraulic corporation for the purpose of developing power from the waterfall at Ottawa: The Ottawa Electric Light Co., the Bronson Co., the OttawaElectric Railway, the Ottawa Investment Co., J. R. Booth, E. B. Eddy and the Ottawa and Hull Power Companies. These concerns practically control at present the water power on both sides of the river, and their joining into a community of interest makes a big financial undertaking. The services of J. Kennedy, engineer of the Harbor Commissioners of Montreal, and of Wm. Kennedy an hydraulic expert, have been secured to make a comprehensive report on the subject.

The Cooper Hewitt mercury vapor electric light is becoming more and more popular for certain purposes. On account of the absense of red rays of light it is very easy on the eyes, and is well adapted for night work where there is no necessity for the discrimination between colors. For that reason it is being employed in factories, composing rooms, warehouses and other places, where great accuracy of vision is required. The light is very strong, yet gives a steady illumination. A current of much higher voltage can be employed with this lamp, without giving a blinding effect than with any other electric lamp. The ultra-violet color of the rays of the light debar its use under many conditions, since it gives to all objects that color.

Abrasive Announcement.

CRYSTAL REGISTERED TRADE MARK CORUNDUM

Our new mill was completed on February 8th, 1904, and from now on shall be able to supply the wants of all our customers.

Three years ago our product, **Craig Mine Corundum,** was first put upon the market. The demand for this product has steadily increased, and last Spring we began the erection of our new plant. It is the largest abrasive mill ever erected in any country. Its capacity is from 5,000 to 8,000 tons per year of finished product. This product is absolutely uniform and we can duplicate your orders indefinitely.

If, in the past, you have been using the impure form of corundum called emery for grinding and polishing, write us stating what quantities of abrasive you require per year and what the sizes are. We are now open to make contracts to furnish you with from one to three years' supply of pure Craig Mine Corundum.

The Canada Corundum Company, Limited

TORONTO, CANADA.

Colonial Poultry Food

will make hens lays. This is, without a doubt, the best food of its kind. **It pays the dealer more** than any other food, in addition to being the best.

Packed in 3 and 6-doz. cases; 1-lb. cartons.
Retails at 25c. per pkge.; costs $1.25 per doz.

Colonial Stock Food — also the best of its kind. This is no idle claim. It is proven. We give the evidence on application. It also **pays the dealer more** than other foods.

Packed and priced as follows :

6-doz. 10c. pkgs., @ .75 doz.
3-doz. 25c. " @ 2.00 "
Holds almost 3 lbs.
2-doz. 50c. pkgs., @ 4.00 doz.
Holds 6 lbs.
25-lb. Pails, - @ 1.30 each.
Retails for 2.25.

We help the dealer sell after he has bought, and we retain his account because the foods are right and the profits more than satisfactory. One agent in a town, and you can be that agent if you write at once.

CANADIAN PRODUCTS IN AUSTRALIA.

IT has been well recognized in Canada that several Canadian manufacturers were paying much attention to Australan trade but it is not likely that the success of their efforts is fully understood. It is a matter of satisfaction that Canadian manufacturers, despite the higher prices they have to pay for much of their raw material, are making such satisfactory progress against British and United States competitors as is evidenced by the following from the Ironmonger, London:

"The extent to which colonial competition with Britain in certain classes of manufactured goods is growing is shown very clearly by the statistics regarding the imports of agricultural implements and machinery into New South Wales, Victoria, and South Australia. These figures, which we append below, render it clear that Canadian agricultural implement makers are not only crippling the trade of our home manufacturers in certain of the Australian colonies, but that in some cases they are running hard the productions of the United States.

"Thus, while the share of Great Britain in this branch of trade in the three leading States of Australia fell from £74,519 in 1899 to £47,889 in 1901, the United States increased their trade from £115,177 to £124,549, and Canada raised the value of her shipments from £13,771 to £46,096. Canada's increase is almost entirely at the expense of the British manufacturer."

CABINET HONORS FOR BUSINESS MAN.

SIR WILFRID LAURIER did a popular as well as a judicious thing when he took Mr. Chas. S. Hyman into his Cabinet. Mr. Hyman is the stamp of man we should see more frequently in public. He is a business man, one who has made a success of his private vocation, who is thoroughly in touch wiht the business community of the country, who is accustomed to dealing with large issues and who has the business man's capacity for taking a sane and liberal views of matters brought before his consideration.

As chairman of the Railroad Committee Mr. Hyman did good work in a field requiring exceptional astuteness, and as chairman of the committee for the redistribution of constituencies, he was placed in a position requiring the exercise of the greatest tact, a quality which is said to be absolutely essential for Cabinet Ministers. Mr. Hyman well deserves his appointment. Although without portfolio his practical point of view and business experience will be of very great service to the Government. No doubt he will shortly be given a portfolio. As Minister of Trade and Commerce he should be a success and would undoubtedly impart life to a department which heretofore has by no means been equal to its possibilities. The business world will follow Mr. Hyman's Cabinet career with interest and sympathy.

TRANSPORTATION PARALYZED.

THE demoralization of the transportation agencies in Western Ontario reached a climax Friday and Saturday of last week when the railroads refused to accept freight, for delivery on some of their lines, and even the express companies broke down and declined to accept parcels for delivery before Sunday or Monday, which usually would have required but a few hours. Complaints of general freight being delayed are common, instances are reported of consignments despatched over two weeks ago which have not since been heard of. The accumulated snow has left behind an accumulation of freight which is almost as burdensome to the over-worked railroad officials as the snow itself. This week, however, should do much to straighten out matters, and in the last resort let it be remembered that the Winter is nearly over and it has been one of those old-fashioned kind, the disappearance of which we have been accustomed to lament.

COMMERCIAL AGENTS' REPORTS.

THE Department of Trade and Commerce has decided on an improvement in its service. This fact in itself is well worthy of especial record but when it is learned that the new departure is the publication of weekly reports from its commercial agents in foreign countries the surprise is but the accompaniment of our satisfaction.

Hardware and Metal has from time to time urged this step, citing as an example of what is wanted, the Consular reports issued almost daily by the United States Government.

The first report published is timely and practical, dealing with butter and cheese trade, the reports being from the commercial agents in the West Indian Islands. A weekly issuance of such reports should give an impetus to our export trade.

AN IMPORTANT LEGAL DECISION.

ANOTHER judgment has just been handed down by a Montreal justice of the Superior Court, which is of much importance and interest to Canadian importers of hardware. This was in connection with the Canada Hardware Company's action against Henry Rogers, Son & Co., of Liverpool, England (Alfred C. Twentyman, proprietor) regarding damages to certain Canada plates the former had ordered from the latter.

This is especially interesting, coming as it does so close upon this same company's victory in the courts in regard to the much discussed c.i.f. question. The case, however, is somewhat different.

It was referred to in these columns about December last, or in the late Fall when the action was first taken. The plaintiffs ordered from Henry Rogers, Son & Co. 500 boxes of Canada plates. The first shipment, 200 boxes, were received on account, in good order, and were accepted and paid for. The second shipment, being the other 300 boxes, was oiled and rusty. The Canada Hardware Co. declined to accept it, and made a claim against the insurance company, thinking at the time that they were at fault. The company who had insured the goods, however, reported that the goods had been shipped in the same condition they were received at Montreal.

The plaintiffs then wrote to the sellers, informing them of the fact, and the latter acknowledged in their reply that the plates had been shipped oiled, but said that the goods were better in that condition and that they generally oiled Canada plates at the request of the Canadian buyers. The plaintiffs answered that they did not want goods of that class, and that the whole shipment was at the seller's disposal and expense. No settlement was made for a long time, and then Henry Rogers, Son & Co. sued the Canadian house for the full amount. The latter answered this with an action against the English firm, claiming the duty charges, freight, wharfage, cartage and storage.

On Wednesday the Canada Hardware Co. received Hon. Mr. Justice Lavergne's decision in their favor.

It reads as follows:

"The Court having heard the parties by their counsel and the proof, as well upon the merit of the principal demand as of the cross demand, examined the procedure, the documents of record and on the whole deliberated.

"Whereas the plaintiff claims for the defendant the sum of $657 price and value of merchandise sold and delivered to the defendant.

"Whereas the defendant pleaded in substance as follows:

"That on the 9th May, 1902, defendant gave an order to plaintiff for five hundred boxes of half-polished Canada plate, three hundred boxes of one size and two hundred boxes of another size at a fixed price, f.o.b. Wales; that about the 23rd June, 1902, the defendant received two hundred boxes in good order, accepted and paid for same and about the 11th August, the remaining three hundred boxes were shipped to the defendant, but were not those purchased by it and were not of the same quality as those already received; that after having examined these goods defendant refused them and notified plaintiff advising him that the plate was not as purchased, that it had been oiled, that it was rusty, had been shipped in this bad condition.

"The plaintiff replied acknowledging that the goods had been oiled to prevent rusting on the sea voyage and that this had been done at the request of purchasers; that on the 23rd October, 1902, the defendant again notified the plaintiff that he would not accept this oiled plate that the first two hundred boxes shipped and accepted had not been oiled, that another quantity of merchandise subsequently shipped was not oiled; that such plate in the ordinary course of business is never oiled, that the order had not been given for oiled goods and that the goods shipped were at the risk and expense of the plaintiff.

"Whereas the defendant by cross demand claimed from the plaintiff the sum of $136.20 for Customs dues, wharfage, freight, insurance, cartage, inspection and storage as per detailed account filed, alleging that it had been obliged to make these disbursements on the arrival of the goods.

"Whereas the plaintiff answered that the goods shipped were of a merchantable quality and in conformity with the contract.

"Whereas the plaintiff for defence tothe cross demand alleged that the goods in question were in conformity to the order and were to be delivered f.o.b. Wales and that all subsequent charges and expenses should be borne by the defendant.

"Proceeding to adjudicate upon the principal demand:

"Considering that the defendant has established the essential allegations of its plea.

"Considering that the goods shipped were damaged before shipment, that they were rusty and oiled, and that the sole fact of their being oiled rendered them less saleable.

"Considering that the defendant was justified in refusing to accept the said goods.

"Doth dismiss the principal demand with costs.

"And proceeding to adjudicate upon the cross demand:

"Considering that the cross plaintiff has established the essential allegations of its cross demand, less the item of $5 doth condemn the cross defendant to pay to the cross plaintiff the sum of $131.20 with interest from the service of the cross demand and costs."

A STRONG MARKET.

IN spite of considerable pessimism on the part of some authorities as to the future of trade conditions in Canada Hardware and Metal has maintained in its reports a strong tone of confidence, taking the ground that the heavy immigration and the industrial activity in all parts of the country will more than offset any influence resulting from the trade depression in the United States.

It is with satisfaction that we observe a general tendency towards accepting this view of the situation, feeling assured that the probablity of an excellent business year in 1904 are guaranteed in proportion to the increased confidence in the future throughout the country.

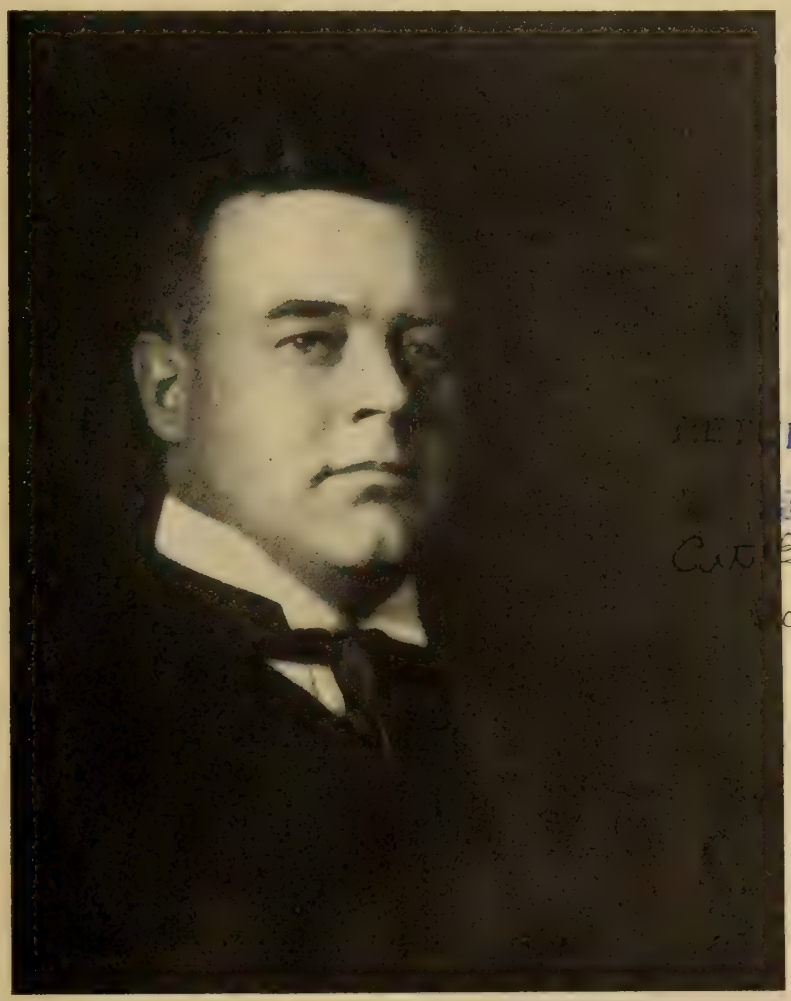
ANOTHER CANADIAN TO THE FORE.

AS the result of a general shake-up in the management of the United States Realty and Construction Company, Mr. H. S. Black, a Canadian from Cobourg, Ontario, has obtained the control of the largest construction company in the world. This company was organized in 1902, with a capital of $66,000,000, to combine the New York Realty Corporation, the George A. Fuller Company with which Mr. Black was connected, and the realty business of the Central Realty, Bond & Trust Company. The new company has shown remarkable energy in the prosecution of its enterprise. Its operations have been in the highest priced real property and it has built the bigger steel buildings, including the famous Flat Iron, the Broad Exchange and the big new building at No. 16 Broadway. It has been the largest user of structural steel for buildings in the United States. In Canada also it has undertaken the construction of several large buildings in Montreal, Toronto, and Winnipeg.

There has been, however, considerable dissension among the directorate. Charges were made that the Fuller Company, one of the concerns subsidiary to the United States Realty and Construction Company, had unlawful relations with Sam Parks and other labor leaders of the same strike. It does not appear that there was any proof of this charge, but added to general accusations of unwise and wasteful management it led to a general investigation which was followed by the resignation of twelve directors and the ascendancy of H. S. Black and James Stillman. During the crisis in the affairs of the company these gentlemen had been active in acquiring a majority of the shares in the open market, and being backed by the Standard Oil interests they succeeded in gaining control. Their plan was the more easily carried out as the company's credit had been hurt by the contest and, moreover, persons familiar with its affairs had sold out at every opportunity.

Mr. Black's rise to fame and fortune has, perhaps, been hastened by the fact that he is a son-in-law of the late George A. Fuller, head of the subsidiary company with which he was connected. But abilities such as his are bound to attain success sooner or later whether helped or hindered by fortune. His progress has been rapid and well deserved, but being still a good Canadian he has not forgotten the town of his birth or the associates of his earlier years. His mother still lives in Cobourg and he has built her one of the handsomest houses in that fashianable resort of American summer visitors. No matter how busy he may be, Mr. Black makes it his duty and pleasure to spend at least one day every year with his mother. In Cobourg he is very popular. Unlike the majority of Americans with great responsibilities he has lost none of his old-time geniality and unlike Dr. Drummond's Jean Baptiste Trudeau, he always knows his old friends, and they are always sure of being received with great cordiality.

It has been the misfortune of Canada in the past to lose many of her bright young men who have found a wider scope for their energies and abilities in the more highly developed country to the South. Mr. Black is one of these. But although there is regret that Canada has lost him, there is rejoicing at his striking success in the land of his adoption.



Mr. H. S. Black, New York.

RNED
1904

ADVERTISING.

One of the strongest arguments in favor of advertising, particularly in a trade paper of standing, is the scope of its influence. Advertising solicitors base their claims for consideration on the general service of an advertisement in the regular field covered. For instance Hardware and Metal claims that its circulation embraces the hardware, paint and oil, metal, machinery and plumbing trades of Canada. Yet proof that the influence of advertisements in its columns is even more wide-reaching than over this large field are continually being given. A case in point has just come to notice. The Dundas Axe Works, Dundas, Ont., have of late been doing progressive and strong advertising in Hardware and Metal with the view of influencing the Canadian trade. In addition to the results in this direction they have, however had as a result of this advertising, enquiry from England for the agency in that country for their axes. What such an enquiry may lead to would be hard to estimate. It may prove the most important result of the company's advertising campaign. Whether it does or not, however, the incident serves as another proof of the wide-reaching influence of progressive advertising in a representative trade newspaper.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL.
10 Front street east.
Toronto, February 12, 1904.

Hardware.

THE condition of the hardware trade remains much the same as it was last week. Orders are arriving freely and shipments are going forward, but though the goods are shipped it is not always they reach their destinations. The enquiry, however, is eminently satisfactory, and were it not that the railways were tied up to a great extent the business doing would be equal in volume if not greater that that of a year ago this time. Remittances are slow. Several Spring lines are beginning to grow more active for future delivery, such as freezers, lawn mowers, etc. The retail trade are pursuing the right policy in thus trying to obtain their stocks as early as possible, for many of the English and American factories are reported packed up with general orders, and delays in placing orders now will mean still greater delay in the filling of them. Even now, though importers cannot say that they are experiencing any difficulty in obtaining goods, still each must wait his turn. Tire bolts are now very low, and the new price is 72 1-2 per cent. off. Cotton wrapping twine, sash cord and cotton rope are again higher. The new prices on English made safety fuse are also a little lower, double tape being quoted at $5.10 to $5.25 per 1,000 feet; single tape, $4.30 to $4.50, and white countered at $5.10 to $5.25. On detonators the new prices are 75 to 85c. per 100 in any quantity. Heretofore these have been sold at a price for quantity. On account of the war between Russia and Japan it is likely that higher prices will prevail in many lines; and should steamships come into requisition a scarcity may follow like that during the South African War, and transportation be somewhat interfered with, which would further enhance values.

Lawn Mowers—These are in better request for Spring delivery. A fairly good number of orders have been received this week. Prices are: With 8-inch wheel, sizes 12, 14 and 16, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18, $4.75; 20, $5.25 each.

Spring Hinges—There is still a fair enquiry for these, for future delivery. We quote as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Game Traps—A few orders have been received this week. The discount is 72 1-2 per cent. on "Victor" and 60 and 2 1-2 per cent. on "Hawley & Norton."

Poultry Netting—There is not a great deal doing at present. The discounts are, for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-guage, the discounts are 55 and 5 per cent.

Wire Nails—There is a little improvement in the demand for these. Last week they were quoted f.o.b. Windsor, Ont. Windsor is not now a delivery point for wire nails. We quote: $2.40 per keg in carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, and St. John.

Cut Nails—Not many of these are being sold at present. The price is unchanged at $2.30 per keg, f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—There is a moderate enquiry for staples. There is no change in prices which are: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c. extra.

Pressed Spikes—The demand is not large. The discount remains at 25 per cent.

Horsenails—A fair trade is doing at unchanged prices. We quote as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—The demand for horseshoes is still fair, and prices are steady, as follows: Iron shoes light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

Fire Shovels—Fire shovels still move out fairly well in small quantities. We quote as follows: No. 70, 39c. per dozen; No. 55, 55 to 82c. per dozen; No. 57, 82c. to $1.10 per dozen; No. 60, 70 to 88c. per dozen; No. 65, $1.10 to $1.23 per dozen; Duplex, No. 7, 96c. per doz.; No. 9, $1.20 per dozen; No. 11, $1.54 per dozen.

Snow Shovels—There is still a good demand for snow shovels, in spite of the lateness of the season. We quote the following prices: "Habitant," $2.50 to $2.75 per dozen; "Victor," 30 per cent. off; steel railroad shovels, 45 per cent. off.

Screen Wire Cloth—The demand for Spring delivery is increasing, and a fair trade has been done this week. The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—There has been a moderate enquiry for this wire. We quote: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No. 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Car lots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in car lots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—A fair trade is doing. We quote: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12. $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. extra per 100 lbs. will be charged.

Barb Wire—Most dealers have already booked their orders early this year, and orders are consequently fewer. We quote the following prices: $2.75 per 100 lbs. f.ob. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—The enquiry for this wire is not active at present. We quote the following prices: Bright and annealed, $2.50 per 100 lb.

f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.: spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.; hay-baling wire, 20 to 25c.

Fine Steel Wire—A moderate amount of business is doing. The discount is 25 per cent., with net extras as follows: 1 and 2-lb. hangs, 25c. per 100-lbs.; 1-2-lb. hanks, 37 1-2c.; 1-4-lb. hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—In these there is a small trade doing at steady prices. Boiler rivets sell fairly well. We quote the following discounts: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—These are selling in fair quantities, and trade is quite satisfactory for the season. Quotations are: Carriage bolts, common ($1.00) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1.00) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1.00) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3.00) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes, 4c. per lb. off; nuts, hexagon, all sizes, 4 1-4c. per lb. off.

Washers, 45 per cent. off.

Screws—These are unchanged in price, and the movement is fairly active. Discounts are: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—A moderate amount of business is doing at unchanged prices: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London. St. John, N.B., and Halifax.

Lanterns—There is not much doing. Our quotations are as follows: Lift, hinged or tilt, $4 to $4.25 per doz.; cold blast No. 2, $7 to $7.50; painted dashboard, $6.50 to $6.75; plain dashboard, $6 to $6.25; searchlight, $20 to $24 doz.; brass cold blast, small, $9.75 to $10.

Cordage—There is still a quiet trade. Cotton goods continue very firm and are again higher. We quote: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11c.; single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 19 to 20c.; cotton twine, 24c. for 3 and 4 ply. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 30 to 31 1-2c.; cotton candle wick, 22 to 24c.

Building Paper—There is very little demand this week, and market is quiet and unchanged. We quote: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll: dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

Cement—There is no change. The market is quiet and steady, under the following prices: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—There is only a very little doing. We quote: English, $16 to $22 1,000; Scotch, $17 to $22.

PLUMBING GOODS.

Several good orders have been placed for Spring delivery. The trade in plumbers' supplies has had a fair start. Soil pipe and fittings, as well as lead pipe have been in better request this week, the travellers on the road having booked some good orders. Iron pipe has been in good steady demand at the prices quoted below. Except for a change in extra heavy galvanized pipe, 2-inch size, which through a typographical error was quoted wrongly last week, there has been no change in the prices below.

Lead Pipe—Trade has improved since a week ago, and a fair business is reported this week, at 8c. for composition and waste and 7c. for ordinary. The discount is 35 per cent.

Iron Pipe—At the reduced prices of last week there has been a better movement. The market is steady. Prices are as follows: Standard pipe, per 100 feet, in lengths under 19 feet—black, 1-8-in., $2.30; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55. Galvanized—1-4-in., $3.20; 3-8-in., $3.45; 1-2-in., $3.90; 3-4-in., $5; 1-in., $7.20; 1 1-4-in., $10.05; 1 1-2-in., $12.20; 2-in., $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in., $4.20: 3-4-in., $5.25; 1-in., $7.55; 1 1-4-in., $10.55; 1 1-2-in., $12.75; 2-in., $17.60. Galvanized—1-2 in., $5.20; 3-4-in., $6.65; 1-in., $9.55; 1 1-4-in., $13.25; 1 1-2-in., $16; 2-in., $21.90. The discount on all sizes of extra heavy pipe is 12 1-2 per cent.

Soil Pipe and Fittings—Trade has been brisker this week. Discounts are: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—The demand is steady, and prices unchanged. We quote: Wire solder, 18c.; bar, 17 1-2c.

METALS.

The trade in metals is still quiet, but on the whole steady. Copper and tin continue firm. Pig iron is not in great abundance in Montreal, and the price is higher. Tinplates continue firm in England. In antimony there has been no further change. It is firm. Spelter is quiet and unchanged.

Pig Iron—There is now little pig iron on the market, but there is but a light demand, the foundries being all supplied, till the opening of navigation. We quote: Summerlee at $21, an advance of $1 to $1.50 over last week's prices.

Bar Iron—There is no change. We quote: Merchants' bar, $1.80; horseshoe iron $2.05; forged iron, $2.

Black Sheets—These are firmer in the Old Country, and large import orders would now come higher, locally there is an improvement in the demand. We quote as follows: 28-gauge, $2.35; 26-guage, $2.30; 22 to 24-gauge, $2.25;

18 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Galvanized Iron—This moves fairly well, at unchanged prices. We quote: Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates—Tinplates are firm in England. There is no change here. We quote: Cokes, $3.75; charcoals, $4.

Terne Plates—There is no change. The price is $6.75 to $7.

Ingot Tin—The tin market is quite stiff. There has been a little fluctuation, but the market recovered and went higher each time. The price is 32 to 32 1-2c., though for large lots the price would probably be shaded to 31c.

Ingot Copper—This is firm as last quoted, $13.75 to $14 per 100 lbs.

Coil Chains—There is no change. We quote: No. 6, 10c.; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 3-8-inch., $4.00; 7-16-inch, $3.80; 1-2-inch, $3.70; 9-16-in., $3.55; 5-8-in., $3.35; 3-4-in., $3.30; 7-8-in., $3.25; and 1-in., $3.20, with 10c allowance on carlots.

Canada Plates—Canada plates are firm both on the English market and here. There are no quotable changes. We quote: 52s., $2.30; 60s., $2.40; 75s., $2.55; full polished, $3.60, and galvanized, $4 to $4.10; galvanized 60c., $4.25 to $4.35.

Pig Lead—There has been a steady demand for this metal, which is firmer at $3.20 to $3.30.

Sheet Zinc—Trade is fair. We quote: Cask lots, $6.15 to $6.25; in small lots, $6.50.

Zinc Spelter—We quote 6c.

Scrap metals—There is no change. We quote: Heavy copper and wire, 9 1-2 to 10c per lb.; light copper 10c.; heavy red brass, 10c.; heavy yellow, 8 1-2c.; light brass, 5 1-2c.; lead, 2 1-4 to 2 1-2c.; zinc, 2 3-4 to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $13 to $15; stove plate, $12; mallable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers 6 to 6 1-2c. per lb.

ASHES.

Prices are unchanged. We quote:

First pots, per cwt	6 00	6 10
Seconds	5 60	5 65
Pearls, per 100 lb	7 00	7 25

HIDES.

The only change to be noted is in calfskins, which are 1c. higher. Trade is quiet. We quote:

No. 1 beef hides	0 08	0 08½
No. 2 "	0 07	0 07½
No. 3 "	0 06	0 06½
Lambskins		0 75
No. 1 calfskins		0 11

ONTARIO MARKETS.

Office of HARDWARE AND METAL,
10 Front Street, East.
Toronto, February 12, 1904.

Hardware.

THE snow blockade is still having a deterrent effect on business. Orders sent out three to four weeks ago to points in Western Ontario are still "en route." Naturally the retailers are not anxious to place further stock orders before their present shipments are in their stores. Orders for Spring and Summer delivery have been well up to the average; in fact most jobbers say that this business has reached a larger total than even last year. There has been some hesitancy about buying wire and wire products as the impression has been more or less general that a decline is inevitable. The Pittsburg reports, however, show an advance in that market and the jobbers are expecting a rise rather than a decline. Horseshoes and horsenails are not active but there has been a big enquiry for lawn mowers, harvest tools, etc. No changes in prices are recorded except an advance of 2c. in candle wick which places the price at 30c. per lb.

Screen Wire Cloth—Orders continue fair at $1.50 per 100 square feet.

Spring Hinges—A fair business is reported. Prices are steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—Orders for future delivery are more generous yet there is still hesitancy in many quarters. No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8, and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. per 100 lbs. extra charged.

Barb Wire—A moderate trade is doing We quote as follows: $2.75 per 100 quote as follows: $2.75 per 100 lbs. f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—There is a fair demand and a better trade is expected as the strong condition of the market is better understood. We quote: No. 9, $2.70 per 100 lbs. f.o.b. Cleveland, freights equalized with factory points at Hamilton, London, Welland or Windsor and allowance to other points up to 25c.; carlots, $2.65, freight allowance to 20c.

Wire nails—There is a better future order business doing with the base price for ordinary lots decidedly stiff at $2.45 per keg f.o.b. Toronto, with carlots $2.40.

Cut Nails—The market is not strong and there is not much doing even at the reduced price, $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—There is not much trade doing. We again quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horsenails—Very little doing this week. We quote discounts as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Screws—Business is not active. Prices are steady. We quote as follows: Flat head bright, 87 1-2 per cent. discount; round head bright 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Business is even more active, with no change in prices. We quote: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—A good business at steady prices is reported. We quote the following prices: Carriage bolts, common ($1 list), 3-16 and 1-4-in., 60 per cent.; 5-16 and 3-8in., 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—The fluctuations in the cotton market have resulted in a net decline of fully 2c. and consequently there is a somewhat easier feeling in cotton products. Manila and sisal are steady. Our quotations are as follow: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn,

11 1-2c.; single lathyarn, 11c.; double shingleyarn, 11 1-2c.; single shingleyarn, 11c.; sashcord "Hercules," 29 to 30c; "Star," 36 to 38c.; cotton rope, 3-16-in. and up, 20 1-2 to 22c.; 5-32-in., 25 to 27c.; 1-8-in., 25 to 28c.; cotton twine, 3-ply, 23 to 24c.; 4-ply, 27 1-2 to 28c.; calking cotton, 16c.; cotton waste, colored, 6 3-4c.; white, 10 to 12c.

Woodenware—A moderate trade is doing at steady prices. We quote as follows per dozen: Washboards, Victor $1.35; Crown, $1.45; Improved Globe, $1.60; Standard Globe, $1.70; Original solid Globe, $2; Superior Solid Back Globe, $2.15; Jubilee, $2.10; Pony, 95c.; Diamond King (glass), $3.10. Tubs, No. 0, $10.50; No. 1, $8.50; No. 2, $7.50; No. 3, $6.50. Pails, No. 1, 2 hoops, $1.75 and 3 hoops $1.90. Matches, Sure Light, parlor, 500s, $3.50; Flashlight, parlor, 1,000s, $5.75; Kodak sulphur, 65s, $3.80.

Building Paper—The market in building paper continues quiet, with last week's prices unchanged. Our quotations are as follows: Tarred felt, $1.85 per 100 lbs.; 2-ply read roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c. per roll.

Cement—The cement market is a little brighter than last week, although no material improvement can be expected until the cold weather breaks up. Canadian Portland is easier, the range of prices being 25c. lower. American Portland is 10c. firmer. We quote: Canadian Portland at $2.05 to $2.40, Toronto, and $1.65 to $1.90 at the works; American Portland, $2.10, Toronto.

Firebricks—Firebricks remain quiet. We quote English and Scotch each at 28 to 35c.

PLUMBING GOODS.

The trade in plumbing goods is picking up, and prospects for a brisk Spring season's trade were never so good. The only changes from last week's prices are in iron pipe, on 1-8-inch and 1-4-inch pipes there is a discount of 10 per cent., on 3-8-inch to 2-inch pipe inclusive the discount is 12 per cent.

Lead Pipe—Trade in lead pipe continues quiet. Our quotations are: Lead, 7c.; lead waste pipe, 8c.; discount 35 per cent.

OPEN HEARTH STEEL

Soil Pipe and Fittings—Business is steady but quiet. We quote the following prices: Lead soil pipe, 50 per cent.; light soil pipe fittings, 50 and 10 per cent.; medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

Iron Pipe Fittings—Trade is fair in iron pipe fittings. We quote the following discounts: Malleable fittings, 15 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; nipples, up to 2-in., 65 per cent.; nipples 2 1-2 to 6-in., inclusive, 60 per cent.

Copper Range Boilers—Trade is fair. Discounts at 15 per cent. continue.

Brass Goods—Fairly good trade doing in steamfitters' brass goods, with prices steady.

Iron Pipe—Trade is fair and steady in iron pipe this week. The following changes in prices are noted: A discount on 1-8-inch and 1-4-inch pipe of 10 per cent., and one of 12 per cent. on 3-8-inch to 2-inch pipe inclusive. We quote f.o.b. Toronto: 1-8-inch,$2.93; 1-4-inch, $2.07; 3-8-inch, $2.27; 1-2-inch, $2.51; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.88; 2-inch, $11.05; 2 1-2-inch $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25.

Kearney & Foot Co.

This well-known brand of Files have been sold all over the world for the past twenty-five years.

The standard of excellence, sharp teeth, highly tempered.

The KEARNEY & FOOT Horse Rasp is superior to all others.

C. F. JACKSON & CO., Limited, IMPORTERS and COMMISSION MERCHANTS
151 Hastings St. W., VANCOUVER, B.C., and LIVERPOOL, ENGLAND.

METALS.

Conditions are practically unchanged from last week. Buyers do not seem at all anxious to get into the market except to meet their requirements. There is practically no change in prices, though it is felt that the war is likely to stiffen the price of lead and to give a rather firmer tone to brass and tin. Pig iron is fairly steady but bar iron is still easy.

Pig Iron—There is a fairly active demand with prices steady locally in sympathy with a better feeling in the United States. Our quotations are $18.50 for No. 1 and $18 for No. 2 f.o.b. Toronto. Prices at Midland are $1.50 lower.

Bar Iron—A moderate business is doing. Prices are easy but nominally unchanged. Our quotations are: $1.80 f.c.b. Toronto for extras cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft. 20c., over 20 ft. by special agreement according to length and size.

Black Sheets—There is a good movement for forward delivery. We quote: the following prices: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—There is no great activity in the line as buyers are slow in getting into the market. We quote the following prices: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—Outside markets are again strong and as stocks are light prices are firm. Our quotations last week were 1-2c. above the market, so the reduction is now made, which makes the price 30 to 30 1-2c.

Galvanized Sheets—Business continues steady. Prices are somewhat easier. We quote: Queen's Head, $4.25 for 28 gauge; American, $4 for 24 gauge; Bell brand, $4.25 for 28 gauge; Gordon Crown, $4.25 for 28 gauge.

Tinplates—The demand is now better than for some months past. Prices are steady. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—There is a fair movement in both sheet and ingot. Prices are steady at follows: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—There is a better trade. The English market is advancing, no doubt due to the war in the East. "Lead bullets," commented one jobber, "are seldom remelted: We quote as follows: $3.30 per 100 lb. for pig lead and $3.65 for bar lead.

Zinc Spelter—The volume of business is not large. Prices show an upward tendency at primary market, but the local situation is unchanged at 6 to 6 1-2c. per lb.

Zinc Sheets—The market is firm and a fair business doing in smal lots. We quote: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c., and wiping, 17c.

Antimony—8c. per lb.

PETROLEUM.

Trade is fair this week with nothing special to report. We quote no change on last week's prices which are as follows: Canadian prime white, 19 1-2c.; Canadian water white, 21 1-2c.; American prime white, 20c.; American water white, 22c., ex-warehouse.

Old Material—Old material is coming in now (unlike last week) in large quantities, and dealers are doing a heavy trade. Advances of 1c. and 1-2c. respectively are noticed in heavy copper and wire, and light copper. These comprise the sole price changes in this week's market. We quote the following prices: Heavy copper and wire, 11c. per lb.; light copper, 9 1-2c. per lb.; heavy red brass, 9 1-2c. per lb.; heavy yellow brass, 8 to 8 1-4c. per lb.; light brass, 5c. per lb.; lead, $2.35 per cwt.; scrap zinc, 3c per lb.; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast scrap, $13 to $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c. per lb.; country mixed rags, 50c. per 100 lb.

Hides, Skins and Wool.

Trade is fairly brisk this week with no special feature to note and prices unchanged from last week's quotations. We quote:

HIDES.

No. 1 green, per lb.	0 07½
" 2 " "	0 06½
" 1 " steers, per lb.	0 08
" 2 " "	0 07

Manchester Metal Market.

S. W. Rogers & Co., Manchester, report, under date of January 30, the metal markets in Manchester as below: "Prices of Scotch iron have remained steady throughout this month, whilst prices of Cleveland iron show a decline of some 4 1-2d. per ton. The market is, however, certainly brighter during the last few days; values have improved a little, and there is more buying, although still for near delivery only, the outlook being too uncertain for any considerable transactions. Copper advanced 30s. per ton during the first ten days of this month, but has since lost the advance, and something more. Tin also, after advancing nearly £1, has since lost about £6 per ton, and is at present steady. Spelter has varied slightly, and closes practically unchanged. Lead has advanced about 10s. per ton, and is steady."

Our Metallic Ceilings and Walls

Are an ideal finish for all kinds of buildings, because they combine both beauty and utility.

We make an almost countless assortment of artistic designs—the plates fitting accurately, the joins imperceptible, and the pattern continuous in perfect precision throughout.

The sanitary superiority, fireproof protection, handsome effect and moderate cost appeal to all progressive people.

You can scarcely afford not to handle these goods.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

BUSINESS CONDITIONS IN NOVA SCOTIA.

By Regular Correspondent of HARDWARE AND METAL.

Halifax, Feb. 9th, 1904.

THE severity of the weather has not been conducive to any improvement in trade and the usual mid-winter dullness reigns. Travellers are out and have picked up a fair share of business for Spring delivery and brisker times are looked for in a month or six weeks. Retail trade is quiet at present especially in centers which draw largely upon country trade as farmers have not been able to get into the towns and cities to do their trading. For this reason also collections have fallen off somewhat and there has been a good deal of renewing in the last ten days.

* * *

The Maritime Association has at last advanced the price of turpentine in single barrels to 94 cents. Linseed oil is also reported to be firmer and there has been an improved demand for this article recently, buyers evidently having come to the conclusion that prices are down as low as they are likely to be this season. Paris Green is reported easier but advanced orders are being taken at the same quotation as last year.

* * *

The trade seems to have the impression that builders' hardware generally will be advanced before the Spring activity opens. What grounds there is for this belief has not been divulged, but probably the opinion is based on the fact that a few lines of United States manufacture have already been advanced. Prospects are not very bright for building operations in Halifax during the Spring, but in the provincial towns a good deal of work has been projected and the season will likely be an average one for building operations.

* * *

Cotton twines are now about 5 cents a pound higher than last year. As about 50 tons of these are sold here annually, chiefly for the use of the fisheries, it will be seen that the advance will take a good many dollars off the fishermen's profits next season. Cordage generally is very firm. Although no change has been made in quotations a leading dealer reports Manila fibre 1½c. a pound higher than it was two months ago and advises all his friends to corner their season's requirements without delay.

* * *

The blast furnace at Londonderry is now turning out 120 tons of pig iron daily. A vein of ore has been discovered back of the furnace and the future of the property is considered bright.

* * *

The Dominion Glass Co., Limited, has applied to the City of Sydney to give it a free site of 20 acres of land and tax exemption for 20 years, in which event it proposes to locate a plant at Sydney. The matter is under consideration.

The International Peat Co., Limited, Toronto, have been incorporated with a capital of $250,000, to manufacture and deal in peat, peat fuel, peat gas, moss, etc. The directors are: Frank White, J. J. Main, both of Toronto; G. A. Griffin, F. X. Frank, both of Guelph, Ont., and H. S. Griffin, Hamilton.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

SITUATIONS VACANT.

WANTED — Experienced Hardware traveller. To cover Manitoba for firm having good connection. Best of references required. Good opening. Apply Box 103, HARDWARE AND METAL, Toronto. (7tf)

SITUATIONS WANTED.

HARDWARE CLERK and bookkeeper; young man; experienced in general hardware, stoves, steam fitters' and plumbers' supplies, wants position; Northwest preferred; references furnished. Box 90, HARDWARE AND METAL, Toronto. (f7)

AS BOOKKEEPER—for wholesale hardware or manufacturer; 12 years' experience; references. Address, Rowland, c/o HARDWARE AND METAL, Toronto. (7)

PARTNER WANTED

WANTED—Partner, active or silent, with some capital to invest in well-established business subject to great expansion. Highest references exchanged. Only acceptable parties need apply. Box 101, HARDWARE AND METAL, Montreal. (10)

AGENCY WANTED.

AN established Manufacturers' Agent in Montreal representing several large American houses, with representatives covering all Canadian territory, wishes to secure a good Canadian manufacturer's line in Hardware or Specialties. Address Box 102, HARDWARE AND METAL, Montreal. 20

TRAVELLER WANTED.

A LONG established Montreal wholesale dry goods house, desires to secure the services of an experienced commercial traveller on a commission basis to extend their connection in the Maritime Provinces. Only one trunk need be carried, and a liberal rate of commission allowed. Position will be vacant about April 1. Application may be addressed to "Maritime," Box 99, DRY GOODS REVIEW, Montreal. (7)

TO EMPLOYERS.

The undersigned labor agent is prepared to forward help to employers who are short-handed. Picked hands of any trade procured on shortest notice, paying own passage. Over 800 registered. Term moderate. F. C. SMITH, 22 Penton street, London, Eng. (14)

R. E. THORNE, 768 Craig St., MONTREAL

Wholesale Agent and Importer

Dry Colors, Ochres, Bronze Powders, Aluminum Powder, Schlag Metal, Bronze Liquids and Varnishes.

Toronto Office—29 Melinda St.

PITTSBURG METAL MARKETS.

From The Iron Trade Review, February 11, 1904.

IN finished lines the market continues to grow better daily, the wrought pipe and wire and wire nail lines being especially strong. Specifications on old contracts are more numerous and call for increased tonnages, and steel makers generally are much encouraged over the situation. That the demand for finished products during the month of January was much heavier than in either November or December is indicated by the furnace report compiled by J. G. Butler, Jr., which shows that 99 stacks out of 166 reporting which use Lake Superior ores were in operation on February 1. These 166 furnaces have a daily capacity of 40,524 tons and the per cent. in operation on that date was 61.6 as compared with 31 per cent. on January 1. The resumption of so many idle stacks of the United States Steel Corporation of course made this good showing possible, and while many of the furnaces were blown in to produce iron for the large tonnages of steel for shipment abroad, the increased domestic demand accounted for the resumption of a goodly number. In addition the stocks of iron at not only the Steel Corporation furnaces but those of other steel producers as well, have been greatly reduced, and many idle stacks of independent steel works also resumed in the month. Last week five idle stacks started up in this territory and ten more will be blown in within the next four or five weeks.

This week the leading wire and wire nail interests advanced prices $1 per ton, but the cut nail manufacturers at their meeting last week reaffirmed prices, which are $4 per ton below those for wire nails.

In the Connellsville region, coke shippers are complaining on account of the shortage of cars, the shortage yesterday amounting to 700 cars below the daily requirements. The severe weather has tied up freight generally, and until it moderates the situation will not be greatly relieved. Coke producers are much encouraged over prevailing conditions, and the weekly output of the entire Connellsville region is only about 50,000 tons below the normal production.

Pig Iron—The pig iron market continues very quiet, the sales during the week being few in number and limited in tonnage. Northern No. 2 foundry sold at $13.25 on a 500-ton order and prevailing quotations range from this price to $13.50. Bessemer iron is held at $12.75 to $13 at the Valley furnaces, one sale of 1,000 tons having been made at $13.75, Pittsburg. Southern iron is entirely out of this market except as required for mixtures.

Steel—On open-hearth sheet and tin bars and billets the pool quotations continue to be shaded anywhere from 50 cents to $1 per ton. Some of the smaller independent mills, not members of the billet association, but who agreed to maintain prices are making the concessions. The Ashland Steel Co. continues to quote $21 at mill, the delivered pool prices throughout the western market thus being shaded. On Bessemer sheet and tin bars nothing better than association prices can be done, as all the mills rolling such Bessemer products are in strong hands.

Bars—At a meeting of the steel bar manufacturers held at the Union Club in this city February 9, prevailing quotations were reaffirmed. Until the bar iron situation in the West is further strengthened, there can be no advance in steel bars. Western iron mills are selling their product from $1 to $2 per ton below steel bars and until they are filled up, there can be no improvement in the steel bar situation in that territory. All of the representatives at the meeting reported a satisfactory volume of business moving, however. Since the dissolution of the hoop agreement some very low prices have been named. Differentials were wiped out entirely some time ago, and on carload lots as low as 1.40c. has been done. We revise quotations as follows: Bessemer steel bars, 1.30c.; open-hearth, 1.40c.; plow beams and cultivator beams, 1.30c., net; channels, angles, zees and tees, Bessemer, under 3 inches, 1.40c.; common bar iron, 1.30c. to 1.35c., Pittsburg. The following differentials are maintained on steel: Less than 2,000 pounds of a size and not less than 1,000 pounds, 10 cents advance; less than 1,000 pounds of a size, 30 cents advance. Hoops are quoted at 1.40c. to 1.45c. in carload lots. Bands are quoted at 1.30c. and take the bar extras.

Coke—The coke market continues to improve and the output of the upper and lower Connellsville regions is now not more than 50,000 tons below the weekly output of a year ago. Idle ovens are fast resuming, the H. C. Frick Coke Co. now operating more than two-thirds of its ovens to supply the constantly increasing demand of the resuming furnaces of the United States Steel

Corporation. Prices, however, have not been affected to any extent, strictly Connellsville foundry coke on large yearly contracts having been sold during the week at $2 at the ovens. This is not the ruling quotation to consumers, as $2.15 seems to be the minimum and $2 to jobbers. On the other hand as high at $2.50 is being asked by certain producers for 72-hour Connelsville foundry coke and six-month contracts are being closed at this price. Connellsville furnace coke is sold at $1.50. For the week ending Saturday, January 30, out of a total of 22,986 ovens in the upper Connellsville region 15,976 were active and 7,010 idle. The estimated production was 177,416 tons as compared with 171,855 tons the previous week. In the lower region there were 3,987 ovens active and 1,396 idle and the production amounted to 45,061 tons. Coke shipments to Eastern furnaces have taken a decided drop, while the shipments to Western stacks have greatly increased.

Wire and Wire Nails—An advance of $1 a ton was made this week by the largest producers and the two large independent mills on wire products and wire nails. The heavy buying in the month of January has filled up all the mills to their capacity and it is doubtful if they will be able to meet the specified deliveries on the Spring trade. A meeting of the cut nail manufacturers was held last Thursday and prevailing quotations on iron and steel nails were reaffirmed. The demand for cut nails is improving, and with wire nails 20 cents a keg higher cut nails in many cases are being favored. We revise quotations as follows: Wire nails, carload lots, to jobbers, f.o.b. cars Pittsburg, $1.90, base; plain wire, carload lots, $1.80, base; barb wire, carload lots, $2.20, base; staples, carload lots, $2.05, keg. Galvanized, 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less than carload lots a further advance of 10 cents is charged. Steel and iron cut nails, carload lots, $1.70, and less than caroad lots, $1.75, f.o.b., Pittsburg, plus freight to point of destination. Terms, 60 days less 2 per cent. off in 10 days.

Pipes and Tubes—New business in pipes and tubing thus far this month has been exceedingly heavy and the outlook for this trade is growing brighter every day. The pipe mills were not affected by last year's slump to the same extent as mills in other lines and there is now every indication of last year's record being passed in 1904. While the merchant pipe demand is heavy that for heavy line pipe is much greater than would be expected in a Winter of such severity.

Old Material—Heavy melting stock continues in good demand, and dealers are endeavoring to buy large tonnages from the mills, but the latter are not selling, as they will need their stocks for their own requirements during the next few months. As high as $13.75 and $14 has been offered the mills by dealers, but the latter are not disposed to sell. Low phosphorus scrap is quoted at $14 to $15, gross ton.

BUSINESS CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL
Room 308 McIntyre Block,
Winnipeg, Feb. 6, 1904.

TRADE is slow due somewhat to the extreme cold weather and to the time of year. The weeks preceding the annual bonspiel are always dull and not more so this year than usual. The annual bonspiel opens here on the 10th and everything points to a more than usually successful gathering. During the week the majority of travellers have come in off the road and will remain in the city until after the bonspiel is over.

THE NEW YORK IRON MARKET.

Owing chiefly to the blowing in of 30 blast furnaces by the companies controlled by the United States Steel Corporation, the weekly capacity for producing anthracite and coke pig iron has jumped from 185,636 tons on January 1st to 278,319 gross tons on February 1st. The output of the furnaces not controlled by the large steel companies was 419,725 tons in January, as compared with 439,965 tons in December. The stocks at the coke and anthracite merchant furnaces, which were 573,085 tons on February 1st, as compared with 597,954 tons on January 1st, show that consumption has been taking care of current output. Statistically, therefore, the merchant furnaces are in better position than they have been, and they are not at all affected, even indirectly, by the greater capacity now active in the steel trade.—Iron Age, Feb. 11.

PERSONAL MENTION.

Mr. W. L. Symons, architect, Toronto, has gone on a trip to the Bahamas and Havana.

Mr. Alex. McKenzie, of Allan & McKenzie, hardware dealers, Galt, Ont., was married a few days ago to Miss Jennie Morgan.

Hambly & Baker, hardware dealers, Barrie, Ont., have bought out Buchanan & Penstone and will amalgamate the two concerns.

Mr. J. B. Kinghorn, general sales agent of the Montreal Rolling Mills, who is suffering from an attack of typhoid fever, is now reported as slightly better.

Mr. H. P. Clearihue, on the eve of his departure for Medicine Hat, N.W.T., was presented with a gold chain and locket by the employes of the Aikenhead Hardware Co., Toronto.

A. Young and Son have sold their hardware and stove business in Wingham, Ont., to Mr. Thomas Armstrong. Mr. Young will engage in the manufacture of cement blocks in Toronto.

Douglas, Prowse & Co., are notifying the trade that they will start on April 1 a wholesale and retail hardware and shipping supplies business in connection with their commission business at Halifax.

Mr. Harvey Graham, of the Nova Scotia Steel and Coal Co., has been in Montreal for the past few days arranging contracts for the coming year's supply of coal. He has been very successful, the sales so far exceeding the total for the whole of last year. He will not ship further west than Valleyfield, though some contracts are to be placed by Cornwall buyers. He says the report that in the iron and steel department they have enough business to keep them going for the next five or six months, is quite true. The firm anticipate some competition with the United States producers, but they are doing a satisfactory business.

A reduction of ten per cent. has been made in the wages of the employes of the Victoria Lumber and Manufacturing Co., Limited, Chemanius, B. C. The reason given for this is said by the manager to be the depression in the lumber business and the severe competition existing in all foreign markets.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITICISM

Edited by
John C. Kirkwood,
TORONTO.

NOTE—Herein are discussed the principles and practice of advertising. Subscribers are invited to send Mr. Kirkwood specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

Some Examples of Better Advertising.

IN speaking recently with one who has taken an interest in this department of Advertising Suggestion and Criticism, I was reminded that it would be a good thing to do to reproduce some specimens of good advertising, by way of variety, if for nothing more. Accordingly, this week I have sought out from Canadian newspapers some examples of good hardware advertising. They are reproduced herewith—in smaller size, of course, than they were originally. With them I am including another advertisement sent in by a close reader of Hardware and Metal. A portion of his letter to me is so cordial that I cannot keep it to myself. He says, "I would be lost without Hardware and Metal. I would not think of running a hardware business without it."

It is not my purpose to review these four examples individually or in detail. They are reproduced for the reader's study, if he thinks it worth while. To my way of thinking they, each of them, constitute good advertising. In some one or another of them exceptions might be taken to the way in which the printer has done his work, but any criticism along this line would have to be very mild and brief. Anyone who reads these advertisements through with care will be struck with several things—their definite character, their business ring, the brief descriptive matter, the feature of price-quoting, their simple, straightforward style. These advertisements give just the very information that buyers desire, and it is no rash thing to say that every one of these four announcements sold goods. Two of them advertise goods at below the regular price; the other two hint at no reductions, thus illustrating that advertising does not need the allurement of cut prices to be effective. When the time comes for price-reductions this fact can be made the basis for strong work, but it is a mistake to think that no advertising is much good unless there are "specials" to advertise.

I commend these examples of advertising to the readers of this department because they are so simple in their style. I feel sure that there are hundreds of merchants who are advertising, and whose work is much inferior to that herewith shown, who can write just such advertisements. It merely requires the clear conception of what constitutes good advertising. Good advertising consists in giving the buying public news of one's business, simply, but briefly said, quickly understood, giving terse descriptions and prices. Surely this is not beyond the powers of even the most unready of writers. And there is one thing sure, namely, that the more one endeavors to do a thing right, the more accomplished one becomes in performing his work. There may be, nay, there are, those who say they are not gifted with ability to write good advertisements. Doubtless this is true in the larger aspects of advertising writing, but for their own business, within the limits of its demands, I feel sure that the number of such incapable ones is very, very small.

One of the firms whose advertisement was reviewed recently in these columns, has written in saying that doubtless the criticisms made and judgments passed were correct, and stating that time forbade their giving the necessary time and thought to this phase of their business. I understand thoroughly how the neglect of advertising comes about. Some men who advertise have no taste, even though they may have talent, for writing. In such cases I strongly urge that the task of preparing the weekly or semi-weekly, or daily advertisement, be entrusted to some one who has time, taste and talent for this sort of work. What it may cost extra for such services will be more than made up in the results.

THINGS YOU NEED NOW.

Axe Economy

Buying a cheap Chopping Axe means a waste of time and money. It is our aim to sell one of which you'll say —"It's the best I ever used." Such is our

Dollar Axe

A Hint on Cattle Chains

When it comes right down to good, strong, reliable cattle chains there is nothing to excel the kind we sell. We have them to suit the bull or the calf. Our moderate prices will please you.

Cross Cut Saws

Of a kind it's a pleasure to work with—easy working and fast cutting. Just the kind our 5-foot Crackerjack is, which we specially offer complete with handles for

A Dollar Seventy-Five

Don't Forget Your Horse

these very cold days. See that he is well blanketed both in street or stable. We have made prices specially interesting to careful buyers of horse blankets.

The Russill Hardware Co.
126 East King St., Toronto

Buffalo Robes

There is good value in the Buffalo Robes we are now selling at $7.50 and $10.00. They are large, heavy, well-lined robes.

Sleigh Bells

In full strings of bronze and nickle-plated bells, at $1.00, $1.25, $1.50 to $2.25 per string.

Shaft Chimes

We have a nice line of Shaft Chimes at 30c., 50c., 75c. to $3.00 per set.

FINANCE AND INSURANCE

MONEY is in excellent demand now in Canada. The activity in many lines of manufacture, the opening up of new stores throughout the West and in New Ontario, called into being by the increased settlement of the country and the liberal purchases of goods for the Spring trade, are all absorbing large sums of money, and rates are being well maintained. Higher rates of interest are being obtained on real estate loans than a year ago. The banks and other financial institutions are in the best position they have occupied in years.

* * *

A sure sign of the growing security and stability of the money market is the fact that since the first of January, 1904, railroad and other corporations in high credit, needing large amounts of additional capital, either for the purpose of extending their operations or making up for inadequate working capital, have experienced no serious difficulty in obtaining the necessary assistance from bankers. It marks a significant change in the attitude of financiers throughout the country from that of the Summer and Autumn of 1903 when the so-called undigested securities gave such a chill to the investing public. It also goes to show that an unimpaired condition of credit, where corporations of the highest grade are concerned, will lead to an equal degree of readiness on the part of investors to take on favorable terms the obligations of railroad companies. Where the calls on the money market are for the purpose of financing deals, combinations and new acquisitions, instead of on capital account, the public who have recently learned a bitter lesson in the school of experience will be prompt to detect the difference between them and the legitimate requirements for new capital with which to provide for additional facilities, new equipment, etc., and will undoubtedly be lead to exercise a certain degree of conservatism and hesitancy.

* * *

The professional man may be in the enjoyment of a good income, but is not often successful in accumulating an estate. Wholly absorbed in his profession he has little opportunity to study methods of money-making, or to master the problems of finance and investment. To such men life insurance is peculiarly adapted. They require little capital in their business. It is generally merely a question whether they will spend their entire income, or save a part of it. In the latter case, life insurance presents the most available plan. A portion of the income thus applied, provides for the family in case of the death of the insured, and guarantees a competence for his old age.—Life Insurance Independent.

* * *

The Bank of Britsh North America, Toronto, is again occupying its old premises at the corner of Yonge and Wellington streets, which have been entirely remodelled. Improvements to the extent of $60,000 have been made in its building, the upper floors of which have been handsomely fitted up as up-to-date business offices, the second flat for the new Toronto clearing house, with the ground floor is occupied exclusively by the Bank of British North America. The prevailing tone in the banking offices proper is buff. Wainscoting counters and pillars are of onyx and Italian marble. High arched ceilings lend an air of spaciousness to the interior which for quiet elegance is not to be surpassed by anything in the city. The general manager, Mr. Inglis, says business has never been more promising than at the present time. His own bank has reason to be more than satisfied, and it is gradually enlarging its staff to keep pace with the increasing demands of business.

STEALING INSURANCE.

IT is claimed that at least 30 or 40 per cent. of all claims at fires of $10,000 or less in New York are fraudulent and that the fire insurance companies have been cheated out of millions this year. Authorities are investigating this alleged systematic swindling and have already brought to light some of the inner workings of the system. Not only are prominent merchants implicated, but members of the fire patrol of the various insurance companies, city officials and public adjusters as well. One adjuster recently convicted confesses that of 300 cases adjusted by him only two were not fraudulent.

Such adjustors will take contracts to adjust a fire loss on any terms. Then they will endeavor to prevail upon their client to pad his loss, generally by bribing the member of the fire patrol left by the insurance company to watch the property. They will pay him to wet or to destroy goods on the premises where the fire has occurred. Or they will pay him to move goods from a floor where no damage has been done to that where the fire has actually been, or to put labels of more expensive goods on the damaged packages.

Another frequent form of swindling is where the merchant goes to wholesale dealers after a fire and obtains receipted bills for goods that never have been delivered. Altrations are thus made in the books to suit the demands of the occasion or else the books are destroyed. The insurance companies have apparently been connived at from all quarters, now it looks as if the connivers would have to pay for their folly.

WHY THE BANKS PREFER THE MERCHANT.

DURING 1903 Canadian banks granted the demands of merchants, manufacturers, farmers, and the general public in loans amounting to $63,516,473 more than those of 1902. During the same period call loans or loans on stock collateral decreased $12,849,301. At intervals through the year brokers tried to borrow largely from the banks but were politely turned down. On the other hand the class of borrowers first mentioned seems to have had no difficulty in obtaining all the funds

it needed. Brokers naturally enough are beginning to suspect that the merchants have been given an undue preference.

The question arises, why have the banks preferred the merchant to the broker? In deciding to whom he will lend a banker is influenced among other things by the considerations of profit, the desire to have the trade and commerce of the country run along smoothly and evenly, by the wish to give reasonable assistance to the development of natural resources, but chiefly perhaps by motives of self-interest, he wishes to advance his own bank, to solidify and strengthen its hold on profitable business of a permanent kind.

With reference to profit, the rates on call loans in Canada rule now at 5 1-2 per cent. but fall to 5 per cent. and lower at certain seasons. On the other hand, mercantile loans are now yielding 5 1-2 and 6 per cent. for the best accounts. A banker dreads being loaded up with funds during a long period of slack demand, when call loans even at 4 per cent. go a-begging. It is no time to secure desirable mercantile connections; every bank is looking for them. Now, however, when money is tight and most of the banks carrying all the business they can stand, is the opportunity for the large banks to make good connections with an eye to the future. Such accounts will go far to secure the desired employment for funds through periods of inactivity; the growing time in Canada is bound to affect the wealthiest and most enterprising firms for years to come and they more than any others will require addtiional credit if they are to urn the current of commercial and industrial expansion to their own profit.

Again it may be in the best interests of trade and commerce if a judicious restraint is imposed upon the customers of the broker; no great harm is done if Jones, the head clerk of an industrial establishment is prevented from taking a fly in "Canadian Pacific" or "Twins," because the banks are not lending freely on stocks; real injury might follow if Brown, the manufacturer, was refused an advance to enable him to get in his raw material.

The most obvious reason, however, for the present attitude of Canadian bankers is the vast contraction of values in stocks. They can hardly be blamed if in the interests of their stock holders they use the opportunity of establishing lucrative connections with desirable business concerns, rather than to neglect these and make loans to broking houses on the uncertain security of the speculative market which will be thrown back on their hands just as soon as money works easier.

AN EXCEPTION.

ONE of the Toronto dailies recently referred to the fact that directors of Canadian banks are comparatively small holders of the stock in the institutions represented by them. That such is not the case in the Canada Permanent Mortgage Corporation is vouched for by the president, who says in his annual address that the Toronto directors represent among themselves, their individual holdings and that of their respective families, and as trustees for others, over $1,200,000 of the company's stock, or one-fifth of the total stock, and besides, are holders of bonds and debentures of the company or on deposit receipt to the extent of about $500,000.

BANKING AND INSURANCE NOTES.

THE Canadian Bank of Commerce has opened a new branch of their bank at Moose Jaw, Assa. Mr. R. A. Rumsey has been moved from Innisfail, Alta., to take charge and Mr. H. M. Stewart has been appointed manager of the branch at Innisfail in place of Mr. Rumsey. This new branch of the bank increases the number of its branches in Canada to 101 and in Canada and the United States to 106.

The Bank of Toronto has opened branches at Omemee, Oil Springs and at the corner of Queen street east and Bolton avenue, Toronto.

The annual meeting of the shareholders and directors of the Canada Permanent Mortgage Corporation was held on February 6, 1904, for the reception of the financial statement and report of the directors for the past year, for the election of directors, and for the transaction of other business.

At the annual meeting of the Bank of Toronto, held on 13th of January, the report presented showed the profits for the year to be $424,200.36 to which is added the amount brought forward from last year, $93,128.07, and the premimum on new stock issued, $454,430, making a total of $971,758.43. From this sum, after the payment of two dividends of five per cent. each, and sundry appropriations, the sum of $554,430 was transferred to rest account, making that account now $3,154,430, or $200,000 in excess of the paid-up capital. The report also stated that eight new branches had been opened during the year.

SPARKING DEVICES FOR GAS AND OIL ENGINES.

THE present popularity of automobiles, launches, etc., has caused much attention to be devoted to various spark ignition devices, says Technics. It is interesting to note that Lenoir's gas engine, made in 1860, had a trembling coil and internal spark gap, not unlike that used at present. Lenoir's engine was killed by extravagant praise, followed by not wholly deserved discredit. Crossley's Otto engine next popularized flame ignition methods, which in the long run were supplanted by the hot tube ignition method. It was then found that iron tubes become choked internally with carbon, and that porcelain tubes frequently became fractured. Platinum tubes proved satisfactory; although they cost £2 each when new, a disused tube could be sold for 35s. When, however, the hot tube method of ignition was tried on motor cars, several persons were burnt to death through its use; thus it happens that after more than forty years spark ignition methods have again come to the front. Their chief disadvantage appears to lie in the tendency to miss fire, and this may often be traced to bad design, especially of the sparking plug. Further, incomplete combustion in the cylinder will cause the porcelain of the plug to become coated with carbon, and this introduces leakage, which in its turn prevents the formation of a spark. It requires a high potential in the gap before a spark can be formed, and leakage carries the electricity away before the potential can rise to the required value. By accident some workmen in Panhard's factory found that an external spark gap greatly improved the regularity of ignition. This observation has been endorsed by many in England and abroad; but the explanation of its action does not appear to be so generally known as its general efficacy. At first sight it would appear, that adding to the resistance of the sparking circuit by including an extra spark gap, is an eccentric way of seeking to promote sparking. The true explanation of the advantage gained appears to be as follows. If the internal spark gap is leaky, as must always to a certain extent be the case, no continuous flow of electricity can occur until the spark can jump the clean external spark gap. When the outer spark occurs, the sudden rush of electricity to the internal spark gap produces a bright spark, since the rate of leakage is now insufficient to carry the electricity quietly away as it arrives.

A careful investigation of the relation between the nature of the spark and the output of the engine is badly needed. There is also room for an improved spark plug.

A KINGSTON BOY'S PROGRESS.

A KINGSTON reader writes: "I have been looking in Hardware and Metal for something about the great fortune that has come to a native of this city through his wife, who has just inherited from her aunt, the late Miss Duncan, nearly $3,000,000, but perhaps you do not consider this metal or machinery news. Anyhow, I am sure a lot of your readers will be interested in knowing something about him.

"Kingston has a constant reason to be proud of its sons in various walks of life, young men who have left home here have achieved success in such a way as to reflect credit upon the home which they have left, as much as upon themselves. This is a noticeable fact regarding statesmanship and public affairs, but it is also very true in many cases of a commercial nature.

"Perhaps one of the most remarkable commercial successes in this country in recent years is that of Mr. F. O. Lewis, the senior member of the wholesale hardware firm of Lewis Bros. & Co., and president of the Hardware Association of Canada, which is recognized as being one of the very foremost business concerns in the country.

"To the very many friends of Mr. Lewis, in Kingston, who knew him as a school boy, and as the companion of their youthful sports, his personal success presents itself almost in the manner of a fairy tale. We all have a distinct recollection in Kingston of Fred Lewis as a youngster, and probably of all his characteristics. He was always thought of as a good-hearted, steady, painstaking personality, even as a boy, and in his amusements he always was a great favorite with his companions.

"After receiving a public school education here, he was employed as a boy with Mr. John Muckleson, now of Winnipeg, and served many years in that business, eventually becoming its chief commercial traveller. It was probably in his capacity of a traveller for the John Muckleson Co. that he made friendships throughout the country that have stood him in good stead ever since. There is no doubt that it was because one of the best known of the wealthy citizens of Canada, Mr. MacLaren, the Perth lumberman, saw his inate good qualities that he determined to place him in a position to use them to their best advantage, that his subsequent success is partly owing.

"It seems remarkable that in a comparatively few years since he established himself in Montreal, he should have placed the business under his management in its present position. What he has achieved in this respect is due largely to his own merit, but his friends in Kingston are now very pleased to know that good fortune of still another sort has smiled upon him, and in short we now look upon him as one of the most remarkable Kingstonians who has ever left us to seek his fortune. He stands to-day unquestionably one of the wealthiest business men in Montreal."

Mr. F. O Lewis.

PAINT, OIL AND BRUSH TRADES

THE MASTER PAINTERS' CONVENTION.

A HARDWARE retailer would find much to interest as well as to instruct him at the convention of the National Master Painters' Association which, at the invitation of the Toronto Master Painters' Association, is in session in Toronto this week.

Paint manufacturers have learned to recognize in these conventions an excellent opportunity to demonstrate the practical value of their products to the visiting delegates, and have manifested their enterprise by making most attractive exhibits in the rooms adjoining to the convention hall.

These rooms have from the first day been the scene of intense activity. Painters from every part of the United States as well as of Canada went from one display to another, their expert eye taking in the comparative merits of the various exhibits.

It is a striking compliment to Canadian paint manufacturers that the visiting delegates from "the States" made frequent comment on the high quality of the paints shown by the manufacturers of Canada. Such remarks as "I never expected to see such excellent goods made here," and "Surely this is not a fair average of the goods you make, is it ?" and "Why this seems to be as good as the best we get at home !" were frequently heard.

The displays were not, of course, confined to Canadian manufacturers. It was noticeable, however, that practically all the United States manufacturers present had established Canadian paints, had resident Canadian agents or had decided to start a branch in Canada at as early an opportunity as possible. The Canadian market, all united in declaring seems to call for the best quality of goods and each firm which has confidence in the merit of its product seems equally confident that this product would find ready acceptance on the Canadian market.

A feature of the convention was the distribution of souvenirs and literature. The demand for the souvenirs was so great that before the week was nearly over nearly all of these were cleared out. The literature for distribution, however, was abundant, and though in big demand enough is left for any of the hardware trade desiring copies.

LITERATURE FOR THE TRADE.

The Sherwin-Williams Co. had many booklets, etc., the most popular of which was a dainty one describing their enamel system. This booklet contained complete specifications for enamel finish on old and new wood work and plasters and brick walls.

The Globe Paint Co., Toronto, had in addition to a dozen or so leaflets describing their various lines, a neat book containing about sixty samples of the colors they are turning out for coach, carriage and car painting.

Berry Bros., Walkerville, had a publication giving a comprehensive description of the varnishes and japans for which they have each a widely recognized reputation.

The United Factories, Toronto, had their new 1901 catalogue of brushes, brooms and woodenware ready. This work, a book of over 200 pages, was secured by practically the trade present from Canadian points.

The James Robertson Co., Toronto distributed a fine vest pocket memorandum book with lithographed celluloid cover. These were much sought and were in constant use by many delegates.

The Francis Frost Co., Toronto, had in addition to their circulars, etc., a card with a puzzle which set many brains busy during the convention, and which is likely to attract wider attention as it is more widely distributed.

The Imperial Varnish Co., in addition to their literature, won the hearts of many delegates by giving away an aluminum match box of artistic design.

Your Customers

depend largely upon your recommendation. Can you afford to take any chances in stocking a cheap or poor paint ?

Hollywood Paste Paint,

Hollywood Ready-Mixed Paint,

Hollywood Floor Paint

are lines that by their recommendation you can establish yourself firmly in the confidence of your customers. They are made to wear on the job, not off it.

A Trumpet Blast from Another Customer.

How can we persuade you that

"ARK" BRAND PAINTS

are the best paints you can possibly get? Will the testimony of other hardware dealers suffice? We have that a-plenty. If "ARK" Brand Paints were a thing of yesterday, you might very properly be dubious about our claims for them. But they are time-tried. They ENDURE. Paint that wears, that adds every year new honors to the hardware dealer's reputation—that is the Paint to handle.

Messrs. The Francis-Frost Co., Limited, Toronto, Ont. Gananoque, Ont., Jan. 15, 1904.

GENTLEMEN:—"After the most successful year's business I have ever experienced, I think it is nothing more than right that I should say a few good words about my greatest 'Trade Bringer,' viz:—Your Grand and Glorious Weather and Water-proof Paint.

I have been handling it now for six years, at first just a little with other makes, two years later just a little of other makes and more of W. & W., and for the last three years, none of the other makes and all of W. & W. And that I have found W. & W. a seller is evidenced by the order I gave your traveller for Spring sorting.

As you know I am right in the heart of the celebrated Thousand Islands, the Paradise of Canada and the summer home of the American millionaires, and most of their palatial homes are painted with W. & W., as it stands the changeable climate, cold and heat, better than any other make.

I have repeatedly been offered can for can of other makes of paint if I would throw out W. & W. and put in their's, and if they were to give me gallons for ½-pints, I would not throw out my best 'Trade Bringer.'

It is sold by me to cover the homes of the millionaire and the mechanic (not the earth), and too good to throw out.

Wishing you every success with your W. & W., the **BEST PAINT MADE,** and trusting that your best month of 1903 may be your worst of 1904."

I am, yours very truly,
(Signed), A. E. H. BRATHWAITE.

Write us for our proposals, and to learn how we help the man that buys "ARK" Brand Paints to sell them.

Montreal, February 10, 1904.

ON Friday, the 5th inst., turpentine dropped still further, and barrel lots were sold at 90 1-2c. per gallon. Advices from the South, however, showed a strong reaction after the decline and on the local market prices advanced in sympathy, though importers, having an active demand, did not follow the second decline. Prices hardened up again, especially in view of reports from the South, which indicate an even smaller crop than last year. Linseed oil is unchanged. Paris green is in fair jobbing demand, and general paints are quiet. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Red Leads.—Genuine red lead, in casks, $4.25; in 100-lb. kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge.—Ground, casks, 5c.; in less quantities, 5 1-2c.; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47c.; 5 to 9 barrels, 46c.; boiled, 1 to 4 barrels, 50c.; 5 to 9 barrels, 49c. Delivered in Ontario between Montreal and Oshawa at 2c. per gallon advance.

Terms 2 per cent. 30 days; 90 days net.

Turpentine—Single barrels, 94 1-4c.; 2 to 4 barrels 93 1-4c. Standard gallon of 8.6 pounds. Terms 2 per cent. 30 days; 90 days net.

Turpentine—Single barrels, 93c.; 2 to 4 barrels, 92c. Standard gallon of 8.6 pounds. Terms 2 per cent. 30 days; 90 days net.

Benzine.—25 to 26c.

Shellac Varnish.—Pure white, $2.60 to $2.80; pure orange, $2.60 to $2.80; No. 1 orange shellac, $2.40 to $2.60.

Mixed Paints.—$1.20 to $1.40 per gallon.

Castor Oil.—8 3-4 to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15 1-4c; 1-lb. packages, 16c.; 1-2-lb. packages, 18c.; 1-lb. tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green.—50 and 100 lb. drums, 15c. per lb.; 25 lb. drums, 15 1-2c; 1-lb. paper boxes, 16c.; 1-lb. tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, February, 1904.

A reduction of 3c. per gallon in turpentine is noted this week. Linseed is 1c. lower. White lead is being much cut up owing to stiff competition. Prices from 10 to 25c. being our quotations are reported. Paris green is still selling at 1c. below the prices quoted below. There is practically nothing doing as retailers are not inclined to buy while their local trade is so dull, especially on a weak market.

White Lead—Ex-Toronto, pure white lead, $4.75; No. 1, $4.30; No. 2, $4; No. 3, $3.60; No. 4, $3.35 in packages of 25 lb. and upwards; 1-2c. per lb. extra will be charged for 12 1-2-lb. packages; genuine dry white lead, in casks, $4.87 1-2.

Red Lead—Genuine, in casks of 560 lb., $4.25 to $4.50; ditto, in kegs of 100 lb., $4.75; No. 1, in casks of 560 lb., $4;

Litharge—Genuine, 6 to 6 1-2c.

White Zinc—Genuine, French V.M., ditto, in kegs of 100 lb., $4.25.
in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c. per gallon.

Paris White—90c. to $1 per 100 lb.

Whiting—60 to 65c. per 100 lb.; Gilders' whiting, 75 to 80c.

Shellac—Pure orange, in, barrels $2.45; white, $2.60 per gallon; No. 1, including price of can.

Pumice Stone—Powdered, $2.50 per 15c. less; in less quantities 30c. extra, cwt. in bbls., and 4 to 5c. per lb. in less quantity; lump, 10c. in smal lots and 8c. in bbls.

Linseed Old—Raw, 1 to 2 bbls, 49c.; boiled, 52c.; 3 to 5 bbls., raw, 48c.; boiled, 51c.; 6 to 9 bbls., raw 47c.; boiled, 50c., delivered. To Toronto, Hamilton and London, 2c. less.

Turpentine—Single bbls., 93c.; 2 to 4 bbls., 92c., delivered; 5 bbls. and over,
